Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Insurance Company of North America

PHILADELPHIA

and the

*Indemnity Insurance Company of North America
write practically every form of insurance except life*

Fatima Cigarettes Are Made In An "ANTI-HYDRO" Waterproofed Factory

The basement in the Liggett & Meyers factory was *permanently* waterproofed and dampproofed in *one operation* and at one cost of less than 1 ½ cents a square foot by using "ANTI-HYDRO" in the one-inch concrete floor topping.

Large bales of tobacco, which must be kept dry to prevent rotting, are stored in this basement. They weigh from 600 to 700 pounds and are continually trucked over the concrete floor. Since "ANTI-HYDRO" both hardens and waterproofs concrete at the same time, it protects the floor from wear as well as water.

"ANTI-HYDRO" is easy and economical to use. Being a liquid integral agent it mixes readily with the gauging water without the aid of skilled labor. Twenty-one years of continuous use on every type of concrete work has made "ANTI-HYDRO" the accepted standard. Use it on your next job for *guaranteed* satisfaction.

Protecting America

Cyclone Fence has proved the effective means of safeguarding children from ever-increasing traffic hazards around school. Confines them safely while at play. Prevents dashing into bus. Centralizes entrances and exits. With Cyclone "Galv-After" Chain Link Fence, Heavily Zinc (Hot-Galvanized) by Hot-Dipping Process AFTER Weaving, the investment covers the entire cost of fencing. No annual painting years longer than ordinary fence. Write or phone for information.

Proposal

SCHOOL DISTRICT OF READING, PA. PROPOSALS FOR THE ERECTION AND COMPLETION SENIOR HIGH SCHOOL BUILDING, THIRTEENTH AND DOUGLASS STS.

Reading, Pa., May 4, 1925.

Sealed proposals will be received by the Board of School Directors of the School District of the City of Reading, Pa., until Tuesday evening, May 26, 1925, eight o'clock Standard time, for the erection and completion of a Senior High School Building to be erected at Thirteenth and Douglass Streets, Reading, Pa.

The proposals shall be submitted separately for the building proper, heating and ventilating, plumbing and drainage, and electric work.

An acceptable Surety Co. bid bond, equal to ten per cent. of the aggregate amount of the bid must accompany each proposal to guarantee acceptance of contract, if awarded.

A Surety Company bond equal to the total amount of each bid will be required of the successful bidders.

Plans may be viewed at the office of the Architects, Ritcher and Eiler, 147 North Fifth St., Reading, Pa. Plans may be secured there also upon application accompanied by a \$100.00 deposit for the General plans, \$80.00 of which will be returned when plans are returned to said office; and \$50.00 deposit for each of the Heating and Ventilating, Plumbing and Electric Work plans, \$35.00 of which will be returned when plans are returned to said office.

The above deposits are made to insure receipt of a proposal, and in the event of no bid being received the entire amount of deposit will be forfeited.

The Board of School Directors reserves the right to reject any or all proposals or to award the contracts in such a manner as may appear to be to the best interest of the School District. All proposals are to be submitted in compliance with the conditions set forth on the plans and specifications.

OSCAR B. HEIM, Secretary.

A large number of delegates from construction and allied industries are expected to attend the Thirteenth Annual Meeting of the United States Chamber of Commerce, which will be held in Washington on the twentieth, twenty-first and twenty-second of this month.

The main subjects for consideration at this meeting will be: the European Situation, American Business Conditions, Commercial Treaty Policy, the Merchant Marine, the Federal Trade Commission, Agriculture, and Congress and the American Public. Because of the interest of business men everywhere in these timely business questions, it is believed that the convention will be exceptionally well attended. Business organizations throughout the country will send representatives.

In addition to the general subjects, other topics which will be discussed are: The Building Congress—Its Purposes and How it is Achieving Them in Five Cities, Economic Use of Land in Urban Communities, Housing in Relation to Citizenship, Ten Years of the Federal Reserve System, Incentives for Individual Production, Employee Training, Agricultural Selling C-operatives, A Survey of the Lumber Industry, the Coal Situation, Corporation Farming, New Aspects of Distribution Costs, Competition in Foreign Markets, Responsibilities of Insurance Policyholders, and Current Transportation Problems.

High government officials and outstanding business men will address the various sessions. Among the speakers will be William Howard aft, Chief Justice of the Supreme Court, who will take part in the dedication of the Chamber's new building; Herbert Hoover, Secretary of Commerce, William M. Jardine, Secretary of Agriculture; Richard F. Grant, President of the Chamber; Former Representative Samuel E. Winslow; Admiral Leigh C. Palmer, President of the Emergency Fleet Corporation; W. E. Humphrey, newly appointed member of the Federal Trade Commission; E. T. Meredith, former Secretary of Agriculture; Charles Nagel, former Secretary of Commerce and Labor; Harry A. Wheeler, President of the Union Trust Company, Chicago; John H. Fahey, Boston Publisher; A. C. Bedford, Chairman of the Board, Standard Oil Company of New Jersey; Former Representative Sydney Anderson, President, The Millers' National Federation; and Carl Gray, President, Union Pacific System.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

NOVELTY BOILER SELECTION PLAN

Revolutionizes Steam and Hot Water Installation

YOU all know the various and uncertain methods of boiler selection which have prevailed for years, due to the continuous raising of ratings. Even the experts have been confused.

The situation had grown so bad that last year the cast iron boiler manufacturers were called together by one of the engineering societies and asked to compose their differences and agree upon some uniform method of boiler rating.

This the manufacturers were unable to do, having been out of agreement for the past thirty years. During this time boiler ratings have been raised repeatedly, in most cases without change in the actual capacity of the boilers.

The Abram Cox Stove Company, manufacturers of Novelty Boilers, then took the bull by the horns and abandoned boiler ratings entirely. After months of study, laboratory tests and the checking of jobs that have been in use many years, they evolved the Novelty Boiler Selection Plan. This plan states the actual amount of radiation that can be installed with each Novelty Boiler.

The Novelty Boiler Selection Plan is the *one accurate* method of selecting the exact

size boiler required under given conditions. This is the first time in the history of the boiler industry that such a thing has been possible, and it is made possible now only by scrapping all old methods of selection and basing this process on an entirely new principle.

In the Novelty Boiler Selection Plan you select a boiler by the dimensions of the flue, and automatically you get that proper balance of boiler and flue which insures the most satisfactory results from a steam or hot water heating system. Complete tables show how the use of a Novelty Boiler of a given capacity with a flue of a given size, brings perfect co-ordination throughout the entire plant.

Write for your copy of the new Novelty Handbook and see how all the various elements that should enter into the selection of a boiler, dovetail together under this new method. It is all worked out for you in tables that represent much thought and labor. If this book were not free, you would gladly pay for it.

You can *now* select a boiler for any job *quickly*, and be sure you have the right size.

Address Dept. BG-5, at nearest office.

Proposal

SCHOOL DISTRICT OF READING, PA. PROPOSALS FOR THE ERECTION AND COMPLETION SENIOR HIGH SCHOOL BUILDING, THIRTEENTH AND DOUGLASS STS.

Reading, Pa., May 4, 1925.

Sealed proposals will be received by the Board of School Directors of the School District of the City of Reading, Pa., until Tuesday evening, May 26, 1925, eight o'clock Standard time, for the erection and completion of a Senior High School Building to be erected at Thirteenth and Douglass Streets, Reading, Pa.

The proposals shall be submitted separately for the building proper, heating and ventilating, plumbing and drainage, and electric work.

An acceptable Surety Co. bid bond, equal to ten per cent. of the aggregate amount of the bid must accompany each proposal to guarantee acceptance of contract, if awarded.

A Surety Company bond equal to the total amount of each bid will be required of the successful bidders.

Plans may be viewed at the office of the Architects, Ritcher and Eiler, 147 North Fifth St., Reading, Pa. Plans may be secured there also upon application accompanied by a \$100.00 deposit for the General plans, \$80.00 of which will be returned when plans are returned to said office; and \$50.00 deposit for each of the Heating and Ventilating, Plumbing and Electric Work plans, \$35.00 of which will be returned when plans are returned to said office.

The above deposits are made to insure receipt of a proposal, and in the event of no bid being received the entire amount of deposit will be forfeited.

The Board of School Directors reserves the right to reject any or all proposals or to award the contracts in such a manner as may appear to be to the best interest of the School District. All proposals are to be submitted in compliance with the conditions set forth on the plans and specifications.

OSCAR B. HEIM, Secretary.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., May 14, 1925. Sealed Proposals will be opened in this office at 3 P. M., June 11, 1925, for the construction of a one-story, brick faced, non-fireproof Post Office Building, approximately 68 by 60 feet in size, at Vineland, N. J. Drawings and specifications may be obtained from the Custodian of the site at Vineland, N. J., or at this office, in the discretion of the Supervising Architect, Jas. A. Wetmore, Acting Supervising Architect.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Insurance Company of North America

Fatima Cigarettes Are Made In An "ANTI-HYDRO" Waterproofed Factory

The basement in the Liggett & Meyers factory was *permanently* waterproofed and dampproofed in *one operation* and at one cost of less than 1 1/2 cents a square foot by using "ANTI-HYDRO" in the one-inch concrete floor topping.

Large bales of tobacco, which must be kept dry to prevent rotting, are stored in this basement. They weigh from 600 to 700 pounds and are continually trucked over the concrete floor. Since "ANTI-HYDRO" both hardens and waterproofs concrete at the same time, it protects the floor from wear as well as water.

"ANTI-HYDRO" is easy and economical to use. Being a liquid integral agent it mixes readily with the gauging water without the aid of skilled labor. Twenty-one years of continuous use on every type of concrete work has made "ANTI-HYDRO" the accepted standard. Use it on your next job for *guaranteed* satisfaction.

REDUCE COAL BILLS REDUCE RADIATION

Six Reasons why you should
insulate your home with

ARMSTRONG'S (Nonpareil) CORKBOARD

1. An excellent non-conductor of heat.
2. Non-absorbent and sanitary.
3. Structurally strong and easy to install.
4. An excellent base for plaster.
5. Slow burning and fire retardant.
6. Reasonable in cost.

Protecting America

Cyclone Fence has proved the effective means of safeguarding children from ever-increasing traffic hazards around school. Confines them safely while at play. Prevents dashing into bus. Centralizes entrances and exits.

With Cyclone "Galv-After" Chain Link Fence, Heavily Zinc-Coated (Hot-Galvanized) by Hot-Dipping Process AFTER Weaving, the investment covers the entire cost of fencing. No annual painting. Lasts years longer than ordinary fence. Write or phone for information.

Bank, Forest Hill, Md. Architect, J. Hamme, City Bank Building, York, Pa. Owners, Forest Hill School Board, Dr. C. Warren, Forest Hill, Md. Cinder block, stucco, 1-sty., 45x26 feet, built-up roof, pine floors, metal window guards, vault, steam heat, electric light. Plans in progress.

Sibley Hospital, Washington, D. C. Architect, the Ballinger Co., 12th and Chestnut Sts., Philadelphia. Owner Berkley Hospital, Washington, D. C. Architect taking bids, due June 4th.

Proposal

Sealed and separate bids or proposals will be received by the Board of School Directors of the School District of the City of York, Pennsylvania, for the erection and completion of a Senior High School Building to be erected on the plot of ground lying at the northwest corner of West College Avenue and South Beaver Street, York, Pa. The proposals must be submitted separately for the—General construction of the building, Plumbing and Drainage, Electrical Work, and Heating and Ventilating—all in accordance with plans, drawings and specifications prepared by John B. Hamme, Registered Architect, York, Pa. A certified check equal to 5% or an acceptable Surety Company bond equal to 10% of the aggregate amount of the bid must accompany each proposal to guarantee acceptance of contract if awarded.

An acceptable Surety Company bond equal to the full amount of the contract will be required of the successful bidders.

Plans and specifications may be secured from David N. Crider, Secretary of the Board of Directors, in the Central School Building, corner of West King Street and Cherry Alley, York, Pa., upon application accompanied by a deposit of cash or certified check of \$100 for each set of the General Plans and Specifications, \$85 of which will be returned for each set when plans and specifications are returned to said office accompanied with bid. A deposit or certified check for \$50 must accompany applications for each set of the Plumbing and Drainage, Electrical Work, or Heating and Ventilating plans and specifications, \$35 of which will be returned for each set when plans and specifications are returned accompanied with a bid.

In case no bid is received the entire amount of the deposit or check will be forfeited.

On or about June 8th, 1925, plans and specifications will be delivered to persons making application in accordance with the above requirements. Plans and specifications will be on view in the office of John B. Hamme, Registered Architect, Citizens' Savings and Trust Building; in the office of M. O. Lewis, Superintendent of Building and Grounds, in the Central School Building, York, Pa., and at the Builders' Exchanges in Philadelphia, Pa., and Baltimore, Md.

The right is reserved to reject any and all bids.

All bids must be signed, sealed, properly marked with name of contract bid upon, and delivered to David N. Crider, Secretary, Central School Building, York, Pa., before noon of Monday, June 29, 1925.

EDWARD W. NEUMAN,

Chairman of the Committee on Buildings, Grounds and Fuel, of the Board of School Directors of the School District of the City of York, Pa.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., May 14, 1925. Sealed Proposals will be opened in this office at 3 P. M., June 11, 1925, for the construction of a one-story, brick faced, non-fireproof Post Office Building, approximately 68 by 60 feet in size, at Vineland, N. J. Drawings and specifications may be obtained from the Custodian of the site at Vineland, N. J., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

FOR LASTING BEAUTY—

A Colormix Colored Hardened Concrete Floor

A Colormix Concrete Floor combines the Wearproof, Waterproof, Dustproof qualities of hardened Masterbuilt Floors with the lasting beauty of any one or any combination of eight attractive, permanent colors.

With Colormix it is possible to secure floors of tile-like beauty at a cost but slightly greater than that of concrete—and they are easily installed.

Correct Size Boiler Quickly Determined by Novelty Selection Plan

A BOILER salesman one day called on four different steam fitters, who asked four different questions about his boiler. The questions were as follows:

The first steam fitter asked:

"How much actual radiation will this boiler carry?"

The second steam fitter asked:

"How much grate surface in this boiler?"

The third steam fitter asked:

"How much coal will it burn per hour?"

The fourth steam fitter asked:

"What size flue is required for this boiler?"

These and all other questions bearing on the subject of boiler selection are answered by the Novelty Boiler Selection Plan of the

Abram Cox Stove Company. This plan is explained in the new Novelty Handbook and it has been hailed as the most helpful method ever devised for determining accurately the right size boiler for a given job.

AT ONE stroke the Abram Cox Stove Company has done away with the confusion which has troubled the steam fitter for years, as a result of continuous raising of ratings on boilers.

The so-called commercial boiler ratings have now been displaced by the Novelty Boiler Selection Plan, which shows the actual radiation each boiler will carry, based on the dimensions of the flue.

Long study, laboratory tests and the checking of jobs that have been in use many years, have proved that this method of selection works out perfectly in all cases where the directions are followed.

Send for the new Novelty Handbook. It will show you in convincing detail how effectually this method operates, and it will enable you to select quickly the exact boiler you need for any building. No calculations on your part are necessary. It is all worked out for you in tables that represent the labor of months. Address Dept. BG-6, at nearest office.

E. Gandy, Burlington, N. J., \$828; heating awarded to Burlington Plumbing and Heating Co., Burlington, N. J., \$4,892; electric awarded to Chas. D. Geller, Burlington, N. J., \$1,249.

City Hall. (Alts. and Add.) Somers Point, N. J. Architect, Bertram Ireland, Guar. Tr. Bldg., Atlantic City. Owners, City of Somers Point, care City Clerk, Somers Point, N. J. Brick, stucco, 2 stories, 39x29 feet, clay tile roof, hardwood floors, steam heat, electric light, tile and marble work. Contract awarded to J. Yates, Pleasantville, N. J.

Apartment and Store Atlantic City, N. J. Architect, C. H. Adams, Chelsea Bank Bldg., Atlantic City, N. J. Owner, John Sobczyk, care Architect. Brick, steel, 3 stories, 20x97 feet, slag roof, hardwood and rubber floors, hot water heat, electric light, metal lath, tile and marble work. Contract awarded to Ralph Thompson, Atlantic City, N. J.

Residences (10), 2600-28 Baird Blvd., Camden, N. J. \$40,000. Architect, Private plans. Owners, Parkview Realty Co., Camden, N. J. Brick, 2 stories, 16x55 feet, slag roof, pine floors, hot water heat, electric light. Contract awarded to Emanuel Kun, 26th and Federal Sts., Camden, N. J.

Residences (2), 2808-10 N. Congress Road, Camden, N. J. \$10,000 total. Architect—private plans. Owners, Orchard and Bell, Camden, N. J. Block, 2 stories, 16x40 feet, slag roof, hardwood and pine floors, hot air heat, electric light. Contract awarded to Eugene Bruner, 2760 N. Congress Rd., Camden, N. J.

Residences (2), Ingham Ave., Trenton, N. J., \$15,000. Architect—private plans. Owner, Ernest Trenking, Ingham Ave., Trenton, N. J. Brick, 2 stories, 32x52 feet, slate roof, hot water heat, electric light. Contract awarded to Wm. A. Pazson, Yardville, N. J.

Residences, (2), 1020 Melrose Ave., Trenton, N. J., \$8,000. Architect—private plans. Owner, T. Holford, 406 Logan St., Trenton, N. J. Frame, 2½ stories, 28x38 feet, pine floors, electric lighting. Contract awarded to Holford and Boyd, 104 Stacey St., Trenton, N. J.

Residences, (2), 2792-94 N. Congress Road, Camden, N. J. \$8,000 total. Architect—private plans. Owner, Louis P. Bruner, Camden, N. J. Block, 2 stories, 16x40 feet, slate roof, hot water heat, electric light pine floors. Contract awarded to Eugene Bruner, 2760 N. Congress Road, Camden.

Residence, 892 Lois Ave., Camden, N. J., \$6,000. Architect, private plans. Owner, Edward Bittner, 884 Lois Ave., Camden, N. J. Frame, 2 stories, 22x36 feet, slate surface roof, hardwood and pine floors, hot water heat, electric light. Contract awarded to Jos. Munger, 1180 Bergen Ave., Camden, N. J.

Residence, Woodside and Reading Sts., Trenton, N. J. \$7,000. Owner, F. E. Preston, Trenton, N. J. Frame, 2 stories, 24x38 feet, slate roof, pine floors. Contract awarded to W. C. Aker, 217 Hollywood St., Trenton, N. J.

Miscellaneous Construction News

Bank Building, Louisville, Ky. Architect, C. A. Ziegler, 1012 Walnut St. Philadelphia. Owner First National Bank, Louisville, Ky. Fireproof const., 4 stories, 56x150 feet; plans in progress.

Residence, Wilmington, Del. Architect, E. C. May, DuPont Bldg., Wilmington, Del. Owner, name withheld. Brick, stucco, 2½ stories, 40x30 feet. Architect taking bids due June 5th.

Miscellaneous Contracts Awarded

Plant (Add.) Roanoke, Va. Architect, the Ballinger Co., 12th and Chestnut Sts., Phila. Owner, Viscose Corp. of Va., Roanoke, Va. Brick reinf. concrete, steel, 2 stories, 169x166 feet, Barrett Specifications roof, asphalt, mastic floors, safety treads, water and damp-proofing, rolled steel sash, sawtooth skylights, fire doors, ornamental iron work, rolled steel shutters, drainage, caulking, painting and glazing, hardware, wood tanks, millwork, slate work, fire doors, hardware, plastering, wire screens, elevator gates, steel partitions, insulation sheet metal work, steel pipe. Contract awarded J. F. Pettijohn, Lynchburg, Va.

Proposal

Sealed and separate bids or proposals will be received by the Board of School Directors of the School District of the City of York, Pennsylvania, for the erection and completion of a Senior High School Building to be erected on the plot of ground lying at the northwest corner of West College Avenue and South Beaver Street, York, Pa. The proposals must be submitted separately for the—General construction of the building, Plumbing and Drainage, Electrical Work, and Heating and Ventilating—all in accordance with plans, drawings and specifications prepared by John B. Hamme, Registered Architect, York, Pa. A certified check equal to 5% or an acceptable Surety Company bond equal to 10% of the aggregate amount of the bid must accompany each proposal to guarantee acceptance of contract if awarded.

An acceptable Surety Company bond equal to the full amount of the contract will be required of the successful bidders.

Plans and specifications may be secured from David N. Crider, Secretary of the Board of Directors, in the Central School Building, corner of West King Street and Cherry Alley, York, Pa., upon application accompanied by a deposit of cash or certified check of \$100 for each set of the General Plans and Specifications, \$85 of which will be returned for each set when plans and specifications are returned to said office accompanied with bid. A deposit or certified check for \$50 must accompany applications for each set of the Plumbing and Drainage, Electrical Work, or Heating and Ventilating plans and specifications, \$35 of which will be returned for each set when plans and specifications are returned accompanied with a bid.

In case no bid is received the entire amount of the deposit or check will be forfeited.

On or about June 8th, 1925, plans and specifications will be delivered to persons making application in accordance with the above requirements. Plans and specifications will be on view in the office of John B. Hamme, Registered Architect, Citizens' Savings and Trust Building; in the office of M. O. Lewis, Superintendent of Building and Grounds, in the Central School Building, York, Pa., and at the Builders' Exchanges in Philadelphia, Pa., and Baltimore, Md.

The right is reserved to reject any and all bids.

All bids must be signed, sealed, properly marked with name of contract bid upon, and delivered to David N. Crider, Secretary, Central School Building, York, Pa., before noon of Monday, June 29, 1925.

EDWARD W. NEUMAN,

Chairman of the Committee on Buildings, Grounds and Fuel, of the Board of School Directors of the School District of the City of York, Pa.

TENDENCIES IN BUILDING DESIGN

"Reprinted by special permission from FACTORY, the Magazine of Management." Time was when "new buildings for old" proved to be merely an enticing phrase to tempt prosperous manufacturers. But great strides in lowering production costs have resulted from the planning by works engineers and consultants in building design. Some of the outstanding current developments are reviewed here.

(Continued from a previous Issue)

The manufacturer of today shows a tendency toward the betterment of the physical and mental conditions of his employees. The modern trend, therefore, is toward the establishment of libraries, hospitals, lunch-rooms, rest-rooms, locker-rooms, gymnasiums, and toward the organization of athletic, civic and art groups. And there are, too, insurance or mutual benefit societies, sponsored or furthered by industrial establishments. The day of poor sanitary equipment in factories is passing. State and city laws and common sense compel the installation of showers and other sanitary appliances.

Where Maintenance Comes In

The type of building or the selection of materials for the construction of the new plant should be based in part on the cost of maintenance or upkeep. It is obvious that the layout and type of building to be used depends on the nature of the occupancy of the structure. A decade ago it was customary to consult a steel fabricator when steel construction was under consideration. Nowadays the trend is to engage an engineer specializing in plant design, who is able to determine whether concrete, steel, or mill construction is the suitable type of building.

Steel or timber once formed the only materials for factory building construction, aside from stone or brick for foundation and walls. Today there are a dozen combinations of these two primary materials, with the addition of concrete. The right material or combination of materials may save 20% of the cost of a building of another equally good material.

Many plants are duplicating old types of buildings when a more modern type would cost much less.

Concrete for multiple-story buildings shows economy, theoretically, over mill construction only for heavy floor loads, but the cost of timber at the job, versus the cost of cement, sand, and stone, and of the kinds of labor used are added considerations.

Floors used to be of wood or dirt. Today the necessity for trucking heavy loads through buildings, has developed many kinds of floors. Wood planks and wood

blocks of sundry shapes and treatments—concrete, cork, ceramic, mastic, bithulitic—all have merit if used under the proper conditions.

In a large newspaper plant, which the writer recently designed, 11 different kinds of floor were used to serve various utilitarian and artistic purposes. Twenty varieties have been used by the writer within a year to fit the specific needs of various occupancies.

Roofs used to be of wood or slate only. We now figure on heat conservation, radiation, or condensation as well as on water tightness.

The steel sash has revolutionized the factory building by giving light areas as cheaply as one can build good wooden or brick walls. This has led to abuses, and one occasionally sees windows from floor to roof often covered partially by radiators, with consequent heat waste.

The mechanical facilities of the modern factory trend toward health and comfort. Buildings are well lighted and heated, but the economical installation is not the one selected by chance from a manufacturer's catalog.

The sensible man buys his building as he would a suit of clothes, to fit his needs, his pocketbook, and to give service. He shuns the cheap and shoddy, and the ultra expensive. There can be secured a becoming building which wears well—and it "fits."

Eliminating Useless Motion and Unnecessary Labor

There is a definite tendency to erect one-story buildings, as before mentioned. The design, of course, must conform to the character of the occupancy. The chief objective is to develop not only the building, but the entire plant, to prevent or eliminate useless motion and unnecessary labor. The main idea of this conception is to co-ordinate the various departments from the introduction of the raw material into the plant to the last stage of manufacture. This phase of industrial engineering, known as the "layout," embraces the delivery of raw materials to the plant, storage of raw materials, straight-line flow of manufacturing operations, storage of goods in process, storage of finished product, expansion of each department for future needs, handling of materials through and between departments, machine layouts, special equipment and facilities for welfare of employees. There are no hard-and-fast rules as to layout. Each plant is peculiar unto itself. The modern trend of manufacture is to increase the number or variety of products. This often creates an unbalanced expansion. Departments overlap or conflict, causing confusion. The tendency of today is to consult the

engineer whose fresh, unprejudiced viewpoint should enable him to straighten out the tangle.

When the growth of a plant has been rapid or without preconception, the engineer nowadays is called to devise a plan of physical rehabilitation and provision for growth. This is one of the signs of the times in manufacture. It is our experience, as has been said, that it is better in certain situations to remodel a plant than to erect a new one. I have in mind the physical rehabilitation of a foundry and shop which, by reason of such reconstruction and re-arrangement, resulting in the co-ordination of its various processes, saves \$250,000 a year including a pay-roll cut of \$100,000 a year. Its steel foundry production has been increased from 500 to 1,200 tons a month at a saving of \$12 a ton. Before the rehabilitation, the concern had to go into the open market for castings. Now it makes them. The cost of this rehabilitation was \$250,000.

Nine of ten plants more than 10 years old are susceptible to such physical improvement. Such investment ordinarily pays 30% to 100%, due to the elimination of unnecessary labor and to the increase in output without large additional capital investment.

Plants of large size tend toward the smaller cities. The statistics of American cities prove this. There cheap land for sites and homes is found. The spirit of domesticity is deeper and more permanent than in the large city; temptations are fewer and less persistent. The worker may walk home to lunch and walk back to the plant. He makes more friends, and those are worthy. He has more time and inclination for a more religious life. He has more time in which to become a better citizen. Labor unions do not press him. His children are less likely to be led astray. The cost of living is less. The labor turnover is less. Freight congestion is less. Too small a city is, however, equally as objectionable as too large a one.

Until recently, little time, effort or money was expended on the beautifying of a plant. The tendency of the times is to combine beauty with utility. It costs no more to build an attractive building than an ugly structure. The morale of a plant is bettered by a harmonious environment. An attractive plant is an advertisement.

When the manufacturer learns that the expenditure and turnover of every dollar in relation to the physical location, layout, design, and equipment of his plant must be intelligently and carefully thought out, he is keeping pace with progress and with his progressive competitors.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Insurance Company of North America PHILADELPHIA

and the

*Indemnity Insurance Company of North America
write practically every form of insurance except life*

Concrete Pits Waterproofed with "ANTI-HYDRO" are always dry

The concrete pits in this building, as well as the tunnel under the railroad, are waterproofed with "ANTI-HYDRO." Both pits and tunnel are always dry.

"ANTI-HYDRO" permanently waterproofs concrete against any head of water. It also hardens concrete and makes it acid, alkali and oil resisting all in one operation. Easy and economical to use, because it is a liquid integral compound, which mixes readily with the gauging water without the aid of skilled labor. Some "ANTI-HYDRO" jobs are 21 years old, yet they look like new. That's because "ANTI-HYDRO" results are permanent. Use it on your next job for guaranteed satisfaction.

Protecting America

Cyclone Fence has proved the effective means of safeguarding children from ever-increasing traffic hazards around schools. Confines them safely while at play. Prevents dashing into buildings. Centralizes entrances and exits. With Cyclone "Galv-After" Chain Link Fence, Heavily Zinc-Coated (Hot-Galvanized) by Hot-Dipping Process AFTER Weaving, the investment covers the entire cost of fencing. No annual painting years longer than ordinary fence. Write or phone for information.

Proposal

Sealed and separate bids or proposals will be received by the Board of School Directors of the School District of the City of York, Pennsylvania, for the erection and completion of a Senior High School Building to be erected on the plot of ground lying at the northwest corner of West College Avenue and South Beaver Street, York, Pa. The proposals must be submitted separately for the—General construction of the building, Plumbing and Drainage, Electrical Work, and Heating and Ventilating—all in accordance with plans, drawings and specifications prepared by John B. Hamme, Registered Architect, York, Pa. A certified check equal to 5% or an acceptable Surety Company bond equal to 10% of the aggregate amount of the bid must accompany each proposal to guarantee acceptance of contract if awarded.

An acceptable Surety Company bond equal to the full amount of the contract will be required of the successful bidders.

Plans and specifications may be secured from David N. Crider, Secretary of the Board of Directors, in the Central School Building, corner of West King Street and Cherry Alley, York, Pa., upon application accompanied by a deposit of cash or certified check of \$100 for each set of the General Plans and Specifications, \$85 of which will be returned for each set when plans and specifications are returned to said office accompanied with bid. A deposit or certified check for \$50 must accompany applications for each set of the Plumbing and Drainage, Electrical Work, or Heating and Ventilating plans and specifications, \$35 of which will be returned for each set when plans and specifications are returned accompanied with a bid.

In case no bid is received the entire amount of the deposit or check will be forfeited.

On or about June 8th, 1925, plans and specifications will be delivered to persons making application in accordance with the above requirements. Plans and specifications will be on view in the office of John B. Hamme, Registered Architect, Citizens' Savings and Trust Building; in the office of M. O. Lewis, Superintendent of Building and Grounds, in the Central School Building, York, Pa., and at the Builders' Exchanges in Philadelphia, Pa., and Baltimore, Md.

The right is reserved to reject any and all bids.

All bids must be signed, sealed, properly marked with name of contract bid upon, and delivered to David N. Crider, Secretary, Central School Building, York, Pa., before noon of Monday, June 29, 1925.

EDWARD W. NEUMAN,

Chairman of the Committee on Buildings, Grounds and Fuel, of the Board of School Directors of the School District of the City of York, Pa.

**ADVERTISEMENT FOR CONSTRUCTION
OF HIGH SCHOOL BUILDING FOR THE
BOARD OF EDUCATION OF AUDU-
BON, CAMDEN COUNTY, NEW
JERSEY.**

Public notice is hereby given that sealed proposals for furnishing labor and materials to construct a High School Building, where shown on plot plan, on grounds situated on the west side of Edgewood Avenue, between Pine and Walnut Streets, Audubon, N. J., for the Board of Education of Audubon, N. J., will be received and opened by the Chairman of the Building Committee in School No. 1, Oak Street and Oakland Avenue, Audubon, N. J., on the 29th day of June, 1925, at 8 o'clock P. M. (Daylight time).

The work for which proposals are hereby invited covers the complete construction of the School Building, including Electric Work, Plumbing and Drainage, Heating and Ventilating, all ready for movable equipment.

Bids will be received for the work under four separate contracts as follows:

1st. For General Construction of the entire Building.

2nd. For Electrical Work.

3rd. For Plumbing and Drainage.

4th. For Heating and Ventilating.

Bids must be on blank forms provided for that purpose by the Architect, and must be enclosed in sealed envelopes endorsed "Proposal for High School Building at Audubon, N. J.," and must state the branch of work for which proposal is submitted.

No bid will be considered unless accompanied by a certified check to the order of the Board of Education, Audubon, N. J., or cash in the amount of five per cent. (5%) of the bid, and also a statement from a Surety Company that it will furnish the Contractor with a bond for the full amount of the contract, binding the bidder to execute a contract if awarded to him. The terms of the proposal with the surety required are fixed by the specifications.

Copies of the drawings and specifications may be seen at the Architect's office, and a limited number of copies of the same will be loaned by the Architect to prospective bidders on deposit with him of a certified check to the Architect's order, for the sum of \$50.00.

These copies of the drawings and specifications may be obtained by application to Arnold H. Moses, Architect, Temple Building, Camden, N. J.

If the copies of the drawings and specifications are returned to the Architect and an estimate submitted the check will be returned, otherwise the deposit may become forfeited.

ARNOLD H. MOSES, Architect.

June, 1925.

**WONDERFUL RESULTS
OBTAINED IN INSULATING
DWELLINGS**

JOHN R. LIVEZEY

The ability of a material to withstand the test of time for particular purposes is shown in an insulating material. Corkboard, brought on the market about 1893, is now the peer of all other materials used for this purpose, and is the Standard where good insulation is desired.

New uses are being found for it, as time goes on—the insulation of machinery to prevent vibration and deadening of

sound—and the latest and most important use of corkboard is for the insulation of houses. In the past, it has been used in isolated cases for this purpose, and about three years ago, the writer urged an investigation of corkboard for house insulation. Little, however, was done until recently, when investigation brought surprising results as to the great saving in fuel, radiation necessary to heat an insulated house over one not insulated, and the great saving in fuel effected by its use, which is a continual source of income from the investment the whole time the heating plant is in operation.

It has been worked out that the most economical thickness to be used in house insulation is one and one-half inches for walls and two inches for the roof or top ceiling, as the case may be.

One might think that its use would increase the cost of construction so as to make its use prohibitive, but such is not the case; by its use, lath is eliminated, thickness of walls can be reduced, radiation required can be cut 20 to 25 per cent.—house plaster can be applied directly to the cork more easily than to lath of any kind at less cost, and we have absolute examples where the cost of installation in a house will only be a few hundred dollars more at the outside, and in some cases, the saving in construction is greater by the use of cork.

It will surprise many to know that with all the evidence we have of the great advantage in insulating a house, and the continual saving effected, many builders and steamfitters are skeptical of the matter.

As to the saving on the investment, the amount of fuel used can be cut 25 to 35 per cent. One builds a home and installs many things that are only justified because of their convenience. Few, if any, will actually show a worth-while return on the investment; but with a house insulated with corkboard, the situation is different. It pays an actual return in reduced fuel bills for the heating season.

The amount of saving depends on a number of factors—but in practically all cases it may be said that the insulation of a house, except in warm climates will pay for itself in fuel saved in a comparatively few years.

Several illustrations of the saving effected will be interesting, using in the first case manufactured gas, the most expensive way to heat, and the second, using natural gas—the saving where coal is used is just as great.

In this connection, some recent estimates of the amount of fuel that could be saved by Corkboard in specific houses will be of interest. The first figures were compiled on a small house. It was of frame construction, approximately 20x20 feet, two stories high, and was to be heated with manufactured gas having a

calorific value of 540 B.T.U., and costing \$1.00 per thousand feet. Assuming an overall efficiency of 75 per cent. for the heating plant, it was shown that by insulating the outside walls and second story ceiling with corkboard, a yearly fuel saving of \$86.00 would be effected, while with one and one-half inches of insulation the saving would amount to \$99.00. The estimated cost of the corkboard applied was \$192.00 for the one-inch material and \$240.00 for the one and one-half inch. Hence, in either case the cost of the insulation would be returned in less than three years, and after that the saving in fuel would be clear profit, for there is practically no depreciation of corkboard in service.

The second case is a residence. This house is 24 by 36 feet with finished third floor. The exterior walls consist of four inches of hollow tile and four inches of face brick and the roof is of slate, all of which were insulated with corkboard. The wall insulation was erected against the hollow tile in Portland cement mortar and that for the roof was nailed to the under side of the rafters. The interior plaster was applied directly against the surface of the corkboard—no lath being used on the insulated areas.

Using natural gas at 60 cents per thousand cubic feet for fuel and assuming an efficiency of 75 per cent. for the hot

water heating plant, the figures showed that the cost of heating this house from October first to May first would be \$207.00 if built in the ordinary way *without insulation*, as compared with \$142.00 if insulated with corkboard. In other words, the use of two inches of pure corkboard on the walls and roof would effect a saving in fuel of \$65.00 per year, or 31.4 per cent.

Now the gross cost of the insulation for this house was \$645.00. But the use of corkboard eliminated 435 square feet of lath which, at 3½ cents per square foot, would have cost \$15.00. Furthermore, the use of corkboard made possible a reduction in the size of the heating plant amounting to \$405.00. Thus the net increase in the cost of the house due to the insulation was only \$225.00 (\$645.00—\$15.00—\$405.00=\$225.00), which would be returned to the owner in a little more than three years in fuel saved.

A testimonial letter to me from a prominent engineer in Philadelphia, regarding his new house finished in 1923, which was insulated with 1½ inch corkboard, put up against hollow tile with Portland cement, states that his house has about 60,000 feet cubical contents, and from October, 1923, to April, 1924, he had only used 12 tons of coal, while to heat his house if it were not insulated, there would be required at least 22 tons in that period. He further states that the house is much cooler in summer, and that the addition of corkboard to a residence is an investment.

The above illustrations should satisfy any intelligent person that an insulated house is the only modern construction.

Besides the insulation of residences, its addition to any class of building is an investment, and it is especially valuable on concrete roofs to prevent the flow of heat either way.

There are many kinds of materials suggested as house insulation, but none of them size up to the ideal or produce the return that pure corkboard does, despite statements to the contrary. It is slow-burning, a fire retardant, resists fire better than any other material, has had the approval of the National Board of Fire Underwriters for cold storage construction, and in places where fire has occurred, its performance has justified this approval many times over.

It is structurally strong, vermin-proof, and will not deteriorate in time, as has been proven in cold storage rooms insulated twenty-five years ago.

The late Chas. P. Steinmetz, formerly consulting engineer for the General Electric Company, said in an address in Boston early in 1923:

"Our present structures are causing annual leakage costs of literally millions of dollars' worth of heat. The seriousness of this loss is not realized because

it is not actually missed and cannot be specifically appreciated. But the loss is there and looms as a serious problem.

"The house of the future will be scientifically built from the standpoint of heating."

More specific is the report of the Bureau of Industrial Research based on a nation-wide survey in which many universities co-operated. According to newspaper accounts, the report states:

"The fuel consumed in 16,000,000 homes of northern states is fully 30 per cent. and probably 50 per cent. more than would be necessary if standards were maintained in materials.

"The heat which pours upwards through the roofs of buildings in Chicago, New York and every other large city where artificial heat is required during part of the year, represents a wasted expenditure of fully a billion dollars every four years. The time honored fallacy that air spaces between roof and upper ceiling serve to stop heat losses is discredited.

"Owners of buildings have not been taught that heat is transmitted through lumber, brick, and stone just as it is through glass, but less rapidly. Many homes in America have a fuel cost equal in a period of 25 years to the first cost."

As an example of saving, a wall consisting of one four-inch course of face brick and a like thickness of hollow tile has a transmission of .28 B.T.U. per square foot, per hour, per degree difference in temperature, *without insulation*. But if insulated with one and one-half inches of pure corkboard, the transmission is reduced to .12 B.T.U., and with two inches of the same material, the flow of heat is only at the rate of .10 B.T.U.—reductions of 57 per cent. and 64 per cent. respectively.

The heat loss through a typical roof consisting of slate laid over wood sheathing or T. & G. boards amounts to .42 B.T.U. per square foot. When insulated with one and one-half inches of pure corkboard, the loss is only .14 B.T.U.—a 66 per cent. saving. And with two inches of corkboard the reduction amounts to 73 per cent.—a transmission of but .11 B.T.U.

Could there be more convincing proof that it is high time to stop this awful waste of fuel and in so doing, it will be like finding easy money. There is another point, too—the idea of the insulated house is so basically sound and is bound to spread so rapidly within the next few years that a house without insulation will have a greatly depreciated resale value.

All existing records for volume of construction work under way in the United States during a single month were shattered in May, according to statistics compiled by the Associated General Con-

tractors of America. The May volume was 26 per cent. greater than that of April, reflecting the great volume of contracts awarded during the two preceding months. The amount of construction activity in the first five months of this year is being taken as an indication that 1925 will set a new twelve-month record.

The cost of construction in the principal centers of the United States remained stationary during May, being exactly double that of 1913. The fact that costs have not increased as a result of the heavy volume of contracts in March is being viewed as a marked assurance of the present stability of the construction industry.

The volume of building contracts during April was the greatest for any month in any year on record, exceeding the previous high mark set in the preceding month, by 11 per cent. Contracts awarded during the first four months of 1925 exceed the volume of those awarded during the corresponding period of 1924 by 8 per cent.

Building permits issued during April showed an increase of 20 per cent. over March. The combined volume of building permits issued during the first four months of 1925 is 4 per cent. less than the corresponding 1924 figure.

The average of wages in the building trades as paid in the principal construction centers of the United States showed no change from the April mark during May. There has been no change in this average since January. There average of prices paid by contractors for construction materials declined one point during May, lower prices for lumber and brick in several localities being chiefly responsible.

Contracts awarded for concrete surface pavement during April totalled 4,900,000 square yards for street and alleys and 12,500,000 square yards for roads. The combination of these totals, 17,400,000 square yards, is larger than the corresponding figure for any month on record, exceeding the previous high mark, set in April, 1922, by 8 per cent. The combined yardage awarded during the first four months of 1925 exceeds the corresponding figure for 1924 by 32 per cent.

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Insurance Company of North America

PHILADELPHIA

and the

*Indemnity Insurance Company of North America
write practically every form of insurance except life*

Concrete Pits Waterproofed with "ANTI-HYDRO" are always dry

The concrete pits in this building, as well as the tunnel under the railroad, are waterproofed with "ANTI-HYDRO." Both pits and tunnel are always dry.

"ANTI-HYDRO" permanently waterproofs concrete against any head of water. It also hardens concrete and makes it acid, alkali and oil resisting all in one operation. Easy and economical to use, because it is a liquid integral compound, which mixes readily with the gauging water without the aid of skilled labor.

Some "ANTI-HYDRO" jobs are 21 years old, yet they look like new. That's because "ANTI-HYDRO" results are permanent. Use it on your next job for guaranteed satisfaction.

FOR LASTING BEAUTY—

A Colormix Colored Hardened Concrete Floor

A Colormix Concrete Floor combines the Wearproof, Waterproof, Dustproof qualities of hardened Masterbuilt Floors with the lasting beauty of any one or any combination of eight attractive, permanent colors.

With Colormix it is possible to secure floors of tile-like beauty at a cost but slightly greater than that of concrete—and they are easily installed.

Bold Stroke Abandoning Catalogue Boiler Ratings

Widely Endorsed by Heating Trade

Thousands of letters endorsing the new Novelty Boiler Selection Plan has been received by the Abram Cox Stove Company, originators of the plan, and each day's mail brings more.

The Novelty Boiler Selection Plan does away with confusing boiler ratings entirely and shows how the exact size boiler for a given job can be easily and quickly determined by chimney flue conditions. It is a system as accurate as it is revolutionary, and it is set forth clearly and concisely in the 1925 Novelty Handbook, which is free on request.

Here are a few extracts from letters which show the approval of Heating Contractors and Engineers

"The Abram Cox Stove Company are to be highly commended for their initial step in establishing their new system of boiler selection. Different manufacturers have highly inflated their ratings in order to receive a paltry few more dollars, instead of trying to render the public a trifle more in satisfaction."

* * *

"This book is just what steamfitters want when selecting the proper size boiler."

* * *

"I think you have gone into the subject of ratings exhaustively and believe the result of this fine work will be to eliminate the general confusion which has existed lately in regard to the ratings of heating boilers."

* * *

"For years I have thought and talked about a sensible way of rating heating boilers, but at last we have got just what we want in your book."

* * *

"The information given in this new catalogue on your Novelty Boilers is just the kind of information that any heating engineer needs. We feel that it would be much better for all manu-

facturers to get their boilers down to this method of rating."

* * *

"I believe it is the best pamphlet that has ever been brought to my attention."

* * *

"I want to congratulate you on the very clear, concise and comprehensive way in which you have explained the capacities of the various sizes of your boilers. This information will appeal to every practical heating man using boilers. You have blaed a trail for many to follow."

* * *

"I have no hesitancy in saying your method of rating is a correct way of obtaining, quickly and with very little trouble, the practical rating of your boilers. You have made a distinct advance which will benefit the entire trade. The present method of rating is an abomination and is a puzzle and delusion to the trade."

* * *

"Boiler lists of capacities and prices gotten up in this way is what the trade has wanted for many years and we commend your energy in being the first of the large companies to take this stand relative to boiler ratings, etc."

Your copy of the 1925 Novelty Handbook
is waiting for you. Write for it now.

Reinforced concrete, stucco, brick, steel, 3 stories and basement, 243x43 feet, wing 75x36 feet (plumbing, heating, electric, ventilation separate), variegated slate, tile, built-up roof, cement and limestone floors, metal lath, rolled steel skylights, kalamein doors, iron stairs, ornamental iron work, architectural terra cotta, dampproofing, roof ventilators, metal lumber, metal tile. Architects taking bids due June 26th.

Miscellaneous Contracts Awarded

Hospital, Dover, Del. Architect, Frank R. Watson, 1211 Walnut street, Philadelphia. Owners, Kent General Hospital, Dover, Del. Brick, reinforced concrete, cast stone, steel, 3 stories and basement, 40x135 feet, slag roof, cement and linoleum floors, elevators, plumbing, steam heat, electric light, metal lath, tile and marble work, rolled steel sash, ornamental iron work, metal partitions, dumb waiters. Contract awarded Bennett McLaughlin, 3260 Ludlow street, Philadelphia.

Buildings (6), Whiting, Indiana. Architect, private plans. Owners, Union Tank Car Co., 21 East Fortieth street, New York City. Brick, reinforced concrete steel, various sizes, slag roof, cement floors, rolled steel sash, ornamental iron work. Contract awarded Hughes-Foulkrod Co., Commonwealth Building, Philadelphia.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

Proposal

Sealed and separate bids or proposals will be received by the Board of School Directors of the School District of the City of York, Pennsylvania, for the erection and completion of a Senior High School Building to be erected on the plot of ground lying at the northwest corner of West College Avenue and South Beaver Street, York, Pa. The proposals must be submitted separately for the—General construction of the building, Plumbing and Drainage, Electrical Work, and Heating and Ventilating—all in accordance with plans, drawings and specifications prepared by John B. Hamme, Registered Architect, York, Pa. A certified check equal to 5% or an acceptable Surety Company bond equal to 10% of the aggregate amount of the bid must accompany each proposal to guarantee acceptance of contract if awarded.

An acceptable Surety Company bond equal to the full amount of the contract will be required of the successful bidders.

Plans and specifications may be secured from David N. Crider, Secretary of the Board of Directors, in the Central School Building, corner of West King Street and Cherry Alley, York, Pa., upon application accompanied by a deposit of cash or certified check of \$100 for each set of the General Plans and Specifications, \$85 of which will be returned for each set when plans and specifications are returned to said office accompanied with bid. A deposit or certified check for \$50 must accompany applications for each set of the Plumbing and Drainage, Electrical Work, or Heating and Ventilating plans and specifications, \$35 of which will be returned for each set when plans and specifications are returned accompanied with a bid.

In case no bid is received the entire amount of the deposit or check will be forfeited.

On or about June 8th, 1925, plans and specifications will be delivered to persons making application in accordance with the above requirements. Plans and specifications will be on view in the office of John B. Hamme, Registered Architect, Citizens' Savings and Trust Building; in the office of M. O. Lewis, Superintendent of Building and Grounds, in the Central School Building, York, Pa., and at the Builders' Exchanges in Philadelphia, Pa., and Baltimore, Md.

The right is reserved to reject any and all bids.

All bids must be signed, sealed, properly marked with name of contract bid upon, and delivered to David N. Crider, Secretary, Central School Building, York, Pa., before noon of Monday, June 29, 1925.

EDWARD W. NEUMAN,

Chairman of the Committee on Buildings, Grounds and Fuel, of the Board of School Directors of the School District of the City of York, Pa.

TREASURY DEPARTMENT. Office of the Supervising Architect, Washington, D. C., June 10, 1925. Sealed Proposals will be opened in this office at 3 P. M., July 13, 1925, for the construction of a one-story brick-faced Post Office Building, approximately 76 by 44½ feet in size, at Walden, N. Y. Drawings and specifications may be obtained from the Custodian of the site at Walden, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

ADVERTISEMENT FOR CONSTRUCTION OF HIGH SCHOOL BUILDING FOR THE BOARD OF EDUCATION OF AUDU- BON, CAMDEN COUNTY, NEW JERSEY.

Public notice is hereby given that sealed proposals for furnishing labor and materials to construct a High School Building, where shown on plot plan, on grounds situated on the west side of Edgewood Avenue, between Pine and Walnut Streets, Audubon, N. J., for the Board of Education of Audubon, N. J., will be received and opened by the Chairman of the Building Committee in School No. 1, Oak Street and Oakland Avenue, Audubon, N. J., on the 29th day of June, 1925, at 8 o'clock P. M. (Daylight time).

The work for which proposals are hereby invited covers the complete construction of the School Building, including Electric Work, Plumbing and Drainage, Heating and Ventilating, all ready for movable equipment.

Bids will be received for the work under four separate contracts as follows:

- 1st. For General Construction of the entire Building.
- 2nd. For Electrical Work.
- 3rd. For Plumbing and Drainage.
- 4th. For Heating and Ventilating.

Bids must be on blank forms provided for that purpose by the Architect, and must be enclosed in sealed envelopes endorsed "Proposal for High School Building at Audubon, N. J.," and must state the branch of work for which proposal is submitted.

No bid will be considered unless accompanied by a certified check to the order of the Board of Education, Audubon, N. J., or cash in the amount of five per cent. (5%) of the bid, and also a statement from a Surety Company that it will furnish the Contractor with a bond for the full amount of the contract, binding the bidder to execute a contract if awarded to him. The terms of the proposal with the surety required are fixed by the specifications.

Copies of the drawings and specifications may be seen at the Architect's office, and a limited number of copies of the same will be loaned by the Architect to prospective bidders on deposit with him of a certified check to the Architect's order, for the sum of \$50.00.

These copies of the drawings and specifications may be obtained by application to Arnold H. Moses, Architect, Temple Building, Camden, N. J.

If the copies of the drawings and specifications are returned to the Architect and an estimate submitted the check will be returned, otherwise the deposit may become forfeited.

ARNOLD H. MOSES, Architect.

June, 1925.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Concrete Pits Waterproofed with "ANTI-HYDRO" are always dry

The concrete pits in this building, as well as the tunnel under the railroad, are waterproofed with "ANTI-HYDRO." Both pits and tunnel are always dry.

"ANTI-HYDRO" permanently waterproofs concrete against any head of water. It also hardens concrete and makes it acid, alkali and oil resisting all in one operation. Easy and economical to use, because it is a liquid integral compound, which mixes readily with the gauging water without the aid of skilled labor.

Some "ANTI-HYDRO" jobs are 21 years old, yet they look like new. That's because "ANTI-HYDRO" results are permanent. Use it on your next job for guaranteed satisfaction.

Warren Co., 1525 Cherry street, Philadelphia.

Bold Stroke Abandoning Catalogue Boiler Ratings

Widely Endorsed by Heating Trade

Thousands of letters endorsing the new Novelty Boiler Selection Plan have been received by the Abram Cox Stove Company, originators of the plan, and each day's mail brings more.

The Novelty Boiler Selection Plan does away with confusing boiler ratings entirely and shows how the exact size boiler for a given job can be easily and quickly determined by chimney flue conditions. It is a system as accurate as it is revolutionary, and it is set forth clearly and concisely in the 1925 Novelty Handbook, which is free on request.

*Here are a few extracts from letters which show the approval of
Heating Contractors and Engineers*

"The Abram Cox Stove Company are to be highly commended for their initial step in establishing their new system of boiler selection. Different manufacturers have highly inflated their ratings in order to receive a paltry few more dollars, instead of trying to render the public a trifle more in satisfaction."

* * *

"This book is just what steamfitters want when selecting the proper size boiler."

* * *

"I think you have gone into the subject of ratings exhaustively and believe the result of this fine work will be to eliminate the general confusion which has existed lately in regard to the ratings of heating boilers."

* * *

"For years I have thought and talked about a sensible way of rating heating boilers, but at last we have got just what we want in your book."

* * *

"The information given in this new catalogue on your Novelty Boilers is just the kind of information that any heating engineer needs. We feel that it would be much better for all manu-

facturers to get their boilers down to this method of rating."

* * *

"I believe it is the best pamphlet that has ever been brought to my attention."

* * *

"I want to congratulate you on the very clear, concise and comprehensive way in which you have explained the capacities of the various sizes of your boilers. This information will appeal to every practical heating man using boilers. You have blazed a trail for many to follow."

* * *

"I have no hesitancy in saying your method of rating is a correct way of obtaining, quickly and with very little trouble, the practical rating of your boilers. You have made a distinct advance which will benefit the entire trade. The present method of rating is an abomination and is a puzzle and delusion to the trade."

* * *

"Boiler lists of capacities and prices gotten up in this way are what the trade has wanted for many years and we commend your energy in being the first of the large companies to take this stand relative to boiler ratings, etc."

*Your copy of the 1925 Novelty Handbook
is waiting for you. Write for it now.

AS THE EDITOR SEES IT

Realizing the importance to the American nation of the ownership of homes by those living in them, the federal government has turned its attention to this question primarily through the Division of Building and Housing of the Department of Commerce. The chief of this Division, Dr. John M. Gries aided by his assistant, Mr. James S. Taylor, are the authors of a publication entitled "How to Own Your Home." The deep interest in the subject and the contents of this publication is shown by the fact that more than a quarter of a million of them have been sold.

However, the need for a popular illustrated edition of this work has been apparent from the beginning. Accordingly, Better Homes in America, the educational non-commercial organization engaged in demonstrating how American families may acquire homes, and by making homes attractive and comfortable, attain to more wholesome life, has printed this valuable pamphlet in that form. A few additions to the original text have been made for this edition by Dr. Gries and Mr. Taylor.

Herbert Hoover, Secretary of Commerce, who is also president of Better Homes in America, has written a foreword to the publication, describing its purposes. Touching on the reasons for home ownership, Mr. Hoover says:

"A family that owns its home takes a pride in it, maintains it better, gets more pleasure out of it, and has a more wholesome, healthful, and happy atmosphere in which to bring up children. The home owner has a constructive aim in life. He works harder outside his home; he spends his leisure more profitably, and he and his family live a finer life and enjoy more of the comforts and cultivating influences of our modern civilization. A husband and wife who own their home are more apt to save. They have an interest in the advancement of a social system that permits the individual to store up the fruits of his labor. As direct taxpayers they take a more active part in local government. Above all, the love of home is one of the finest instincts and the greatest of inspirations of our people."

The percentages of home ownership in all of the states of the Union are shown in a table compiled from figures gathered by the Census Bureau in the last national census. Following this is a second table, showing the percentage of ownership of homes in all of the cities of the country having populations of 100,000 or more.

The first subject taken up in detail is "How Much to Pay for a Home." These questions, according to this publication should be asked of himself by the

head of a family contemplating the purchase or building of a home:

"1. What is the family's annual income, and what will it probably be next year and the year after?"

"2. If business slackens, is the breadwinner likely to lose his position or have his earnings reduced?"

"3. Will anyone else in the family be able to earn an income?"

"4. What does the family now pay for rent each year?"

"5. How much of the income is being saved?"

"6. How much could the family afford to pay out each year in paying for a house, and for the expenses that go with it?"

"How to Own Your Home" advises strongly against buying beyond one's ability to pay, which usually results in the loss of the home or a long and discouraging struggle to hold on to it and meet payments.

However, in view of the fact that money put into a house means that eventually there will be no payment corresponding to the continual outlay for rent, it is pointed out that if a family is able to pay one-sixth of its income for rent, it may very well afford to pay a quarter of its income during the years when the home is being bought. While always leaving a margin of safety for illness or other unforeseen happenings, it is urged that families may well afford to cut down on other expenditures to enable them to purchase or build homes.

The importance is stressed of taking into consideration that there will be not only interest payments and installments on the principal of the loan in buying a home, but that allowance must be made for renewals and repairs, taxes, special assessments, insurance, water tax, and various improvements and accessories. For instance, families living in apartments sometimes fail to consider the cost of fuel for heating purposes in budgeting their outlay for buying and operating a home.

The authors of "How to Own Your Home" emphasize the high importance of having agreements in regard to financing building or purchasing properly signed by both parties and drawn with careful attention to legal details. No business man or firm would object to these requirements.

Dealing in more detail with financing, the booklet urges that the larger the cash payment which can be made, the better. It is usually desirable that at least one-fifth the value of the property being purchased should be paid for in cash. The pamphlet includes tables showing the allotment of income necessary for annual incomes varying from \$1,200 to \$6,000, where the cash payment is twenty, thirty, and forty per cent. of the total value

of the home. The tables are fully explained, and the incidental additional expenses are taken into account.

In the new addition, a warning is sounded against certain "loan trusts" that are run for the profit of the promoters. It is customary for these organizations to advertise that they will lend money to home buyers at 3 per cent.

"But they pay no interest at all to depositors who are lured in by doubtful promises of the chance of obtaining 'cheap' loans," the revised pamphlet points out. "This method is unbusiness-like. The first few customers, often 'insiders' representing the promoters, may obtain loans cheaply. But they do so only at the expense of later depositors who may receive no interest at all on their deposits for years, and who may not be able to borrow when they need funds, or before the company goes out of business. Such a company, as has been said, borrows money from its depositors and pay them no interest; it lends the money at three per cent. Thus, as long as it operates it absorbs three times as much for expenses and profit as an ordinary well-run building and loan association. Many sound organizations of the latter type, for example, pay five per cent. interest on deposits and lend the money out again at 6 per cent., retaining only 1 per cent as a charge for doing business."

The pamphlet advises against borrowing cash on life insurance policies in order to make first payments. It goes in detail into the question of mortgages, second mortgages, discounts on second mortgages, the honesty of the lender of money on mortgages who may counsel purchasing beyond one's means and foreclosing in order to buy the property at forced sale, financing the home during building operations, borrowing from building and loan associations, purchases where the title does not pass at once, paying off loans by installments, and other financing details.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

This Book Takes the Guess-work Out of Boiler Selection

"I want to congratulate you," writes a prominent heating contractor in regard to the Novelty Boiler Selection Plan, "upon the very clear, concise, and comprehensive way in which you have explained the capacities of the various sizes of Novelty Boilers. You have blazed the trail for many to follow."

Thousands of letters have been received from heating contractors, engineers, and others in the heating profession, endorsing the Novelty Boiler Selection Plan as given in the 1925 Novelty Handbook. This Plan abandons boiler ratings and gives the actual amount of net radiation that each boiler will carry under seven different conditions found on jobs. With the use of it, a Novelty Boiler of a given size, installed under given chim-

ney conditions, together with the proper amount of radiation and your good workmanship, automatically assures you a satisfactory heating job.

There is no need to tell you how misleading and inaccurate are the "so-called" boiler ratings. They have been raised many times without any material change in the capacity of the boiler, and that is why another prominent heating contractor wrote, "I have no hesitancy in saying your method of rating is the correct way of obtaining quickly and with very little trouble, the actual amount of radiation your boilers will carry. You have made a distinct advance which **will benefit the entire trade**. The present method of rating is an abomination, and is a puzzle and delusion to the trade."

When you see the Novelty Boiler Selection Plan you will say that it is just the thing you have been wishing for. It is all in the Novelty Boiler Handbook and every item is fully explained. Write for your copy today. Address Dept. D 7 at the nearest office.

Protecting America

Cyclone Fence has proved the effective means of safeguarding
children from ever-increasing traffic hazards around school.
Confines them safely while at play. Prevents dashing into bus
Centralizes entrances and exits.
With Cyclone "Galv-After" Chain Link Fence, Heavily Zinc-Coated
Hot-Galvanized by Hot-Dipping Process AFTER Weaving, the
investment covers the entire cost of fencing. No annual painting
years longer than ordinary fence. Write or phone for
information.

THE SUB-CONTRACTOR AND HIS CONNECTION WITH THE BUILDING INDUSTRY

BY R. W. RAFTIS

The sub-contractor is, or should be, a highly trained and experienced specialist in the branch of building in which he is engaged. Eventually the time will come when he will be referred to by his proper title, to-wit: () engineer. The prefix to the title being the particular trade or craft of the industry to which he subscribes, such as: Heating, plumbing, ventilation, fireproofing engineer, etc.

Apart from this element of the situation, it has come to pass that few sub-contractors (so called) give their best bid nor do they even approach it, previous to the awarding of the main con-

tract. Consequently the general contractors, in self-defense, takes the bids high and low, measures the qualifications of the individuals or firms and, together with his own knowledge of the business, strikes an average. He then cuts that five or ten per cent. and the result is incorporated in his own estimate. (He expects, of course, to glean a little more at the time of letting the sub-contracts.)

The feature of this practice that I believe is all wrong on the part of the general contractor is: After arriving at a set-up price, due to a survey of the bids received, he very often accepts bids for the second and third time (this applies to some architects and plenty of owners) and then informs the actual low bidder at that stage that he has a lower bid, but does not say that the lower bid is the one that he, himself, has made up and upon which he has determined as all that he will pay for the work to be let, regardless of the merits of his estimate. Sometimes he states that he can let the work for such and such an amount. Perhaps he can and does, but the inference is that he *has* such an offer and not wishing to question his honesty or ability, the sub-contractor is placed in the position of either accepting an offer that is insufficient for the service to be rendered, or of refusing the contract.

Of course the sub-contractor, like the general contractor, wishes to get all that he can for his services. Some of the first-named folks do not set a high enough value on that which they have for sale. Others expect too much and then again we find some who have kept pace or even got acquainted with the efficiency of the times and figure values up or down according to the workings of their incomplete knowledge of the craft.

It is my belief that the sub-contractor who wishes to make the greater distance in the world is the one who, first of all, learns his particular craft in all of its branches from top to bottom. Beginning at the bottom he strives for greater efficiency in all component parts and, after that, improves on all that he has ever learned or anybody else in the game knows, and arriving at this stage of the journey he will then set the proper value on his services and make up reasonable and fair estimates in accordance with the knowledge gained and his value to the industry, and stand by these estimates, come what may.

The sub-contractor who makes this voyage successfully will soon learn that the successful general contractor will value the same service to the same extent and measure and the *auction* of the inefficients and bargain drivers, so far as his services are concerned, will come to an end.—*Bulletin, Association Building Contractors of Illinois.*

— little tips for big builders Send for them!

The use of KNICKERBOCKER LIME PRODUCTS by builders, contractors and agriculturists, is increasing by leaps and bounds. One of the largest lime plants, east of the Ohio River, is required to meet present demands.

Each of these brands stands out as the very best product on the market for the particular use for which it is intended.

Years of research and experience permit us to guarantee all KNICKERBOCKER LIME PRODUCTS to give maximum results with minimum labor cost.

In order that you may learn more about these wonderful KNICKERBOCKER LIME PRODUCTS, we have condensed the facts in three attractive booklets. These booklets are yours for the asking.

KLIMCO—A specially prepared, ready-to-use lime and cement mortar for brickwork and masonry. Klimco produces a plastic, easy-spreading, quick hardening, economical mortar.

KNICKERBOCKER NEAT—An economical plastering preparation containing the proper amount of first grade hair. It has great sand carrying capacity and produces a mortar that will harden in less time than when old-fashioned lime is used.

HYDRATED LIME—Knickerbocker Hydrated Lime is high in lime oxides and low in impurities. It is the best for use in cement, concrete and mortars. For agricultural purposes it is unsurpassed.

A Perfect Product for Every Purpose

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

"ANTI-HYDRO" Keeps Springs of Water Out of This Building

There are two underground springs under this building but the basement is always dry because the concrete foundation is permanently waterproofed with "ANTI-HYDRO."

"ANTI-HYDRO" waterproofs concrete against any head of water; it also hardens it in the same operation.

Being a liquid integral agent, "ANTI-HYDRO" mixes easily with the gauging water without the aid of skilled labor. It also accelerates the set of cement without weakening it and eliminates finishers' overtime work.

For 21 years "ANTI-HYDRO" has been successfully used on every kind of concrete hardening and waterproofing work. Use it on your next job for permanence.

As The Editor Sees It

THE semi-annual report of building operations in Philadelphia for the first six months of this year, published in full on other pages of this issue of the GUIDE, is evidence that Philadelphia is experiencing great activity in building.

The total work of all kinds for which permits were issued in the six months just ended was \$86,014,515, compared with \$72,573,485 for the first six months of 1924, or an increase of \$13,441,030. The number of operations shows an increase of 1146 for the half year of 1925.

In the half year ending June 30th permits were issued for 9879 new buildings at an estimated cost of \$76,484,030; alterations and additions, 3887 permits amounting to \$8,862,040 were issued and miscellaneous permits of 866 amounting to \$668,445.

The greatest increase is noticeable in residences. Every month of this year showed a greater number of residences started than in the corresponding month of 1924.

From January 1, 1925, to July 1, 1925, residences of the two story type showed increase over the same period in 1924 of 2,243 operations at an increased value of \$11,196,585. Residences of the three story class showed a small increase in number with the value remaining approximately the same, 229 costing \$3,066,000 in first six months of 1924, and 254 costing \$3,029,375 in 1925 to end of June.

As has been noted lately on all our semi-annual reports, garages again increase in value, but this time decrease in number. The first half of 1924, 1421 garages costing \$3,588,735 were started, this half year only 1320 were begun but the cost was \$4,218,915. The same number of schools were built, but at a larger figure. Eight schools in both years to date costing in 1924 \$2,654,590, and in 1925 \$4,418,555.

In the first half of the year 1925 there was an unusually large increase in the number and value of tenement houses erected in Philadelphia. During the first six months of 1924 thirty tenement houses costing only \$4,478,500 were started; this half year just ended fifty-two tenement houses costing \$11,367,000 were started.

March of 1925 was the largest month on record for the year, with \$22,424,530 estimated value of work started during the month. April, with \$21,110,645, was next in volume of work.

The record for the first six months of 1924:

Estimated Cost for Each Month

Month	Permits	Operations	Estimated Cost
Jan.	884	1,249	\$ 8,642,525
Feb.	956	1,454	7,173,885
March ...	1,610	3,322	15,756,560
April	1,582	2,675	18,946,260
May	1,735	2,731	10,940,375
June	1,577	2,040	11,108,880

The record for the corresponding six months of 1925:

Month	Permits	Operations	Estimated Cost
Jan.	614	964	\$ 6,567,755
Feb.	957	1,929	10,320,835
March ...	1,718	4,164	22,424,530
April	1,461	2,848	21,110,645
May	1,369	2,423	14,434,300
June	1,310	2,304	11,156,450

The records for first six months of the last ten years:

Year	Permits	Operations	Estimated Cost
1915	923	1700	\$ 3,873,850
1916	873	1709	5,147,115
1917	618	763	2,328,755
1918	564	694	1,671,900
1919	1073	1951	7,354,625
1920	1171	1213	6,743,015
1921	1280	1406	4,587,395
1922	1492	2461	13,190,220
1923	1334	1742	8,370,875
1924	1577	2040	11,108,880
1925	1310	2304	11,156,450

A marked decline was manifested in the building of manufactories, 37 costing \$4,282,760 were begun in six months of 1924 and 34 costing only \$1,825,820 were started in first six months of 1925. Office Buildings increased in same period from 15 to 19, but decreased in estimated cost from \$7,843,900 in 1924 to \$3,907,800 in 1925. A decline of some import occurred in Churches—17 costing \$1,741,200 were built in first half of 1924 and only 5 costing 613,650 in same time in

"Facts are stubborn things." Advertise only the truth about your product and watch the result.

(Continued from page 419)

1925. As the number of homes and tenements have increased so much and the number of Churches decreased considerably no doubt the citizens of Philadelphia are receiving their religious instruction over the radio and saving in construction of new Churches.

In two story dwellings the forty-second ward showed the largest number started, 2,104 as compared to 1,584 started in 1924 in first half of year. The fortieth ward showed an increase this year from 671 in 1924 to 1,044 in 1925. The following wards had increases over 1924 in first six months: 21, 22, 23, 26, 35, 36, 38, 39, 40, 41, 42, 43, 48.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

No More Ashes To Lug

No clumsy pan to spill dust and dirt on the kitchen floor

The Glenwood Ash Chute

solves the problem. It is located just beneath the grate and connected by a sheet iron pipe straight down through the kitchen floor to ash barrel in cellar. No part is in sight. Not a particle of dust can escape. Just slide the damper once each day and drop the ashes directly into the ash barrel.

The Dust-Tight Cover

to barrel is another entirely new Glenwood Idea and is very ingenious. This is only one of the splendid improvements of the new plain

Cabinet Glenwood

the Range without ornamentation or fancy nickel, "The Mission Style" Glenwood. Every essential refined and improved upon. This Range can be had with the latest and most improved Elevated or End Gas Range attachments. It can be furnished with fire box at either right or left of oven as ordered. Our handsome booklet tells all about it.

The Cabinet Glenwood

PHILADELPHIA

Where Do You Keep Your Valuables?

YOU own many things of value—bonds, stocks, certificates, notes, mortgages, contracts. You have papers which, once lost, could not be restored; they should be kept in a vault that is fire and burglar proof.

The prices of boxes start as low as \$5.00 per year. You are invited to inspect these modern safe deposit vaults at either or both of our offices.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Insurance Company of North America

A Bold Stroke—

Widely Endorsed by Heating Engineers

Thousands of letters endorsing the new Novelty Boiler Selection-Plan, have been received by the Abram Cox Stove Company, and each day's mail brings more of them.

This Plan eliminates cast-iron boiler ratings and in place of them, it gives the actual amount of net radiation that each boiler will carry under seven different conditions found on jobs.

It was a bold stroke; but read what heating engineers say about it. Here are a few extracts from some of their letters:

"I think you have gone into the subject of ratings exhaustively and believe the result of this fine work will be to eliminate the general confusion which has existed lately in regard to the ratings of heating boilers."

* * *

"I congratulate you on this fine compilation of data. I can appreciate the vast amount of labor necessary and want you to know that the engineering element will appreciate your efforts."

* * *

"The information given in this new catalogue on your Novelty Boilers is just the kind of information that any heating engineer needs. We feel that it would be much better for all manufacturers to get their boilers down to this method of rating. We think you have made a wonderful step toward something that will be appreciated more and more

by the man whose business it is to select the proper size boiler and chimney for the job."

* * *

"I have looked over this catalogue with a great deal of interest and congratulate your company upon having taken such an advanced step in presenting **definite engineering data** relative to the basis on which your boiler capacities are determined."

* * *

"I want to congratulate you on the very clear, concise and comprehensive way in which you have explained the capacities of the various sizes of your boilers. This information will appeal to every practical heating man using boilers, and especially to those who are not quite conversant with the steam and hot water heating practice. You have blazed a trail for many to follow."

"HOW TO OWN YOUR HOME"

(Continued from June 24)

General property considerations are given careful attention in the booklet, the basis for the choice of a site for the home being regarded as of major importance. The list of considerations which must be kept in mind lists the many factors as follows:

A. General location.

1. Low or high land values.
2. Transportation facilities: (a) To place of work and (b) to shopping centers.

3. Protection offered to homes: (a) Private restrictions, (b) zoning ordinances and city planning, and (c) fire and police protection.

B. Specific location of the lot.

1. Character of neighborhood.
2. Location with reference to schools and playgrounds for the children.
3. Desirable points for the lot: (a) shade trees, shrubs, and planting; (b) set of house with reference to sunlight and prevailing winds, and (c) character of the soil and necessity for grading, filling, or draining.

C. Other safeguards in buying property.

1. Danger of buying lot too long before building.
2. Extent of street and public utility improvements (paving, sidewalks, water supply, sewerage, electricity, gas).
3. Possible assessments.
4. Proportion of lot value to total outlay.
5. Checking property values: (a) Land and (b) house.
6. Plan of house and quality of construction.
7. Steps taken in buying.
8. Examination of title.

Under "Points to be Examined," the booklet lists and discusses condition of plaster, woodwork, plumbing fixtures, heating plant, painting, roofing, and general items as follows:

"Is the house properly wired for electricity? What proof is there that the insulation of wiring in the walls was inspected? Is there good pressure on the gas jets? Do they leak?"

"Is adequate fire protection afforded in the construction of chimneys and around them? A chimney through which smoke can leak into the house is dangerous.

"Is there sheathing and building paper on the house? This should be known, especially in cold climates. Are windows and doors weather-stripped? Is the

mortar between brick and stone work sound?

"Previous owners should be asked whether the house was comfortable, whether it is easily heated, and whether or not the drainage lines had to be cleaned out frequently.

"The buyer should satisfy himself as to the condition of stoves, lighting fixtures, and screens.

"One should find out when the house was built, and by whom.

"Does the cellar get damp and have moist walls, due to poor masonry work, lack of rain leaders, rising ground water, leaking pipes, or imperfect drainage around the foundation wall?"

Maintenance costs and the expenses of home ownership are dealt with extensively, consideration being given to repairs and renewals, property taxes and assessments which may be levied, insurance, water taxes or rent, accessories, such as screens, storm windows, weather stripping, awnings, and the like, and improvements which may be desired or become actually necessary.

This illustrated booklet is now being distributed from national headquarters of Better Homes in America, 1653 Pennsylvania Avenue, Washington, D. C. Copies of it are available to prospective home owners at a nominal price — 15 cents. The booklet may be obtained by direct application to Better Homes in America.

THE INTERIOR PLASTERING

When we realize that eighty per cent. of the average house interior that is visible is plastered surface, the importance of having good plaster is evident.

Just why there has been so little written about this important subject is hard to say when we consider how much has been said about the desirability of more permanent construction. Many of the features that are receiving so much attention depreciate more slowly and are easier to replace than the plaster.

Cracked, streaked, or fallen plaster ruins the appearance of a home that might be otherwise good, putting it in an objectionable class.

Historians tell us that in ancient days plasterers ranked with the artists and sculptors. Certain it is that those workmen produced surfaces that remained permanently beautiful through countless years.

Now that modern methods have simplified the work and there are such excellent materials, plastering should be more beautiful and permanent than ever before.

The subject is not a simple one. It takes skill and knowledge to produce a permanent, crack-proof, and fire-resistive plastered surface. After the plastering is

done, there are certain things that it must resist: moisture, temperature, changes and stresses of one sort or another. Heavy objects dropped on the floor, the constant passing of heavy trucks, running and jumping indoors doors and windows slamming: all of these produce vibrations that are transmitted to the ceilings below and to the walls.

Changes in temperature prove a great test of the endurance of plaster. The average house is considerably warmer in the daytime than in the night. The plastering responds to this change by tending to expand in the warmth and contract as it grows cooler.

The effect of moisture on plastering is most evident in the rooms where there is the greatest amount of moisture, the kitchen and bathroom. All plaster is more or less absorptive, consequently the moisture is conducted through the plaster into the base. Obviously, if the base is of an absorptive nature, it will change, swelling, and shrinking alternately. Because of the low tensile strength of plaster, its endurance is taxed during this process.

Lath and plaster are so inter-related that one cannot be properly considered without the other. Plaster alone has little strength and has to be used over a base which provides the necessary support and strength to preserve its surface unbroken and to hold it in place under the action of normal settling of the supports, severe jars, and temperature changes.

The plaster base needs to be durable economical to use, free from shrinking and swelling, easily handled, and it must take the plaster easily and be economical in its use.

There are many kinds of interior plaster in use today, cement, lime, gypsum, magnesite, and combinations of these materials and special brands.

Most plasters are mixed with sand. If clean sand is not available, plaster can be secured that contains the right amount of sand already mixed in. A form of gypsum plaster comes mixed with wood fiber instead of sand. Lime usually has hair mixed in as a binder. Portland cement plaster is applied much easier if a small amount of hydrated lime is added. The directions furnished by the manufacturers are important and should be carefully followed.

The use of metal lath insures crack-proof, fire-resisting and permanently beautiful walls and ceilings.

Expanded metal lath is made by slitting metal sheets, expanding the small portions where slit and stretching the sheet so as to produce a series of small openings. Other forms are made by stamping sheets of metal but not expanding. Either kind is sometimes furnished

with heavy ribs to give rigidity. Metal lath is usually galvanized or painted.

One form of metal lath consists of steel wire similar to screening, but with much larger meshes and heavier wire.

Metal lath should be applied with the long dimension across the studs or joists except when ribbed; then the ribs are placed against the supports. If wood lath is used, the placing of metal lath strips in vertical corners between walls and ceiling will prevent cracks at these weak points. Metal lath placed under stairways, back of ranges, around fireplaces, and at all points close to flues or heating plants is an added protection.

Special plaster base consists of selected wood strips beveled to form a key for the plaster and fastened to fiber board which has been coated with asphalt mastic. This comes in rolls 32 or 36 inches wide and can be applied quickly to the studs. Special insulating plaster base can also be obtained which is excellent for use on exposed walls and ceilings.

If wood lath is used, it should be of a non-staining quality and should be spaced so as to give a good key for the plaster. Latticing to ceilings and partitions are spaced $\frac{1}{4}$ " or $\frac{3}{8}$ " apart to ensure a perfect key.

Because the base on which the plaster is applied is never seen in the finished house, it is often neglected, yet this base determines the homes measure of beauty and the degree of permanence and safety.

This base may be metal lath, special plaster base, or ordinary wood lath.

The usual way to do a plastering job is to put on the "scratch" coat, this first coat and allow it to remain for a day or two before following with the "brown" coat. Some plasterers scratch one day and apply the brown coat the next, getting the second coat on before the first is too hard to make it tiresome putting the second on.

The finishing coat can be lime that has been sieved or prepared hydrated lime that comes in bags ready for use. The usual method is to have a large box filled with water into which the hydrated lime is shaken until the mixture becomes quite thick. This is allowed to stand for about twenty-four hours when it is ready for use. A little plaster of paris is mixed with this as the work proceeds.

The finishing coat can be put on two or three days after the brown coat has been laid on or it can be delayed until it is thoroughly dry although the drier the brown coat the better the finish.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Insurance Company of North America

"ANTI-HYDRO" Keeps Springs of Water Out of This Building

There are two underground springs under this building but the basement is always dry because the concrete foundation is permanently waterproofed with "ANTI-HYDRO."

"ANTI-HYDRO" waterproofs concrete against any head of water; it also hardens it in the same operation.

Being a liquid integral agent, "ANTI-HYDRO" mixes easily with the gauging water without the aid of skilled labor. It also accelerates the set of cement without weakening it and eliminates finishers' overtime work.

For 21 years "ANTI-HYDRO" has been successfully used on every kind of concrete hardening and waterproofing work. Use it on your next job for permanence.

Proposal

SESQUI-CENTENNIAL EXHIBITION ASSOCIATION

Headquarters, 5th and Chestnut Sts.
Philadelphia, Pa.

Sealed proposals are invited and will be received at the office until Friday, July 31, 1925, at 10 A. M., Eastern Standard time (11 A. M., Daylight Saving time), for the following work: For the construction of an Exhibits Building of the Sesqui-Centennial Exhibition Association, at League Island Park, Philadelphia, Pa., in accordance with the contractor's own design and plans. For further information as to floor plan, site, etc., apply at Headquarters, 5th and Chestnut Streets, Philadelphia, Pa.

D. C. COLLIER, Director General.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., July 17, 1925. Sealed Proposals will be opened in this office at 3 P. M., August 18, 1925, for remodeling and enlarging the U. S. Post Office at Pottsville, Pa. Drawings and specifications may be obtained from the Custodian at Pottsville, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

ADVERTISEMENT FOR WORK ON THE GROUNDS OF THE CAMDEN COUNTY TUBERCULOSIS HOSPITAL, ASYLA, N. J.

Public notice is hereby given that sealed Proposals for furnishing labor and materials for Work as hereafter described on the grounds of the Camden County Tuberculosis Hospital near Asyla, New Jersey, will be received and opened by the Chairman of the Committee on Tuberculosis Hospital in the meeting room of the Board of Chosen Freeholders, in the Court House, Camden, New Jersey, on the 31st day of July, 1925, at two o'clock P. M. Daylight Saving Time (1 P. M. Standard Time).

The work for which proposals are hereby invited covers:

1st—The Incinerator and Incinerator Building.

2nd—The grading, top-soiling, construction of tar bound macadam roads, cement walks, or macadam walks, concrete gutters and curbing, cobble gutters, and surface water drainage where shown.

Bids will be received for the work as follows:

1st—For Incinerator and Incinerator Building.

2nd—For grading, roads, paths, etc., as above.

The right is reserved to accept or reject any or all proposals or to waive any informality in any proposal presented. All bids must be in sealed envelopes endorsed "Proposal for Work at the Camden County Tuberculosis Hospital." No bid will be considered unless accompanied by a certified check to the order of the County of Camden, or cash in the amount of 10% of the bid, and also a statement from a Surety Company that it will provide the Contractor with a bond, in the full amount of the contract, binding the bidder to execute a contract if awarded to him. The terms of the proposal with surety required are fixed by the specifications.

Copies of the drawings and specifications will be on file at the office of the architect for the purpose of estimating. A limited number of copies of the plans and specifications will be loaned to the prospective bidders on deposit of a certified check to the architect's order in the sum of (\$25.00) Twenty-five Dollars. These plans and specifications may be obtained by application to Arnold H. Moses, A. I. A. Architect, Temple Building, Camden, N. J.

If plans and specifications are returned and an estimate submitted the check will be returned, but should they not be returned, nor an estimate submitted, the deposit may become forfeited.

County of Camden, a Municipal Corporation of New Jersey by the Committee of the Board of Chosen Freeholders on Tuberculosis Hospital.

GEORGE R. PELOUZE, Chairman.

ARNOLD H. MOSES, A. I. A.,
Architect.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

"Go easy on the hot water, son, I want a bath, too"

A frequent admonition in many unfortunate households—the homes that have a skimpy supply of hot water. These days, when frequent bathing is such a necessity, certain members of the family have to bathe in cold water—unless they beat the rest to the tub or shower.

Hot water worries do not exist in houses equipped with the

NOVELTY TANK HEATER

Think of 40 gallons of steaming hot water constantly on tap at a cost of less than 5 cents a day! Think of a little heater that burns less than a bucket of pea or buckwheat coal every 24 hours—yet keeps on the job day and night supplying baths for *all* the family—and for all the family dishes and laundry, too!

The Novelty needs but a minute's attention night and morning. Low in first cost—lasts a lifetime—quickly installed—costs one-fourth as much as gas to operate. (This is unprejudiced for we make both kinds.)

Install the Novelty with its brick-lined fire-pot, baffled water-way, two-bar rocking grate, and reinforcement rods at the sides. We are advertising extensively in Philadelphia newspapers, and this modern hot water supply system will find ready acceptance with your customers.

Get all the facts—now! Write or phone today for complete information. Address Dept. B G2.

New Jersey Contracts Awarded

Nurses Home, Trenton, N. J., \$160,880. Architects, P. L. Fowler Co., 224 East Hanover Street, Trenton, N. J. Owners, Mercer Hospital, Mr. Lyons, 196 South Broad street, Trenton, N. J. Brick, steel, concrete, fireproof, 3 stories and basement, 60x145 feet, slag roof, cement and tile floors, hollow tile, elevators, safety treads, roof ventilators, rolled steel sash, fire doors, iron stairs, ornamental iron work, tile and marble (heating, plumbing and

electric work, reserved.) Contract awarded to Thos. Day & Son, Hunt Building, Trenton, N. J. Plumbing to Trenton & Heating Co., Trenton, N. J., \$16,484. Heating to Trenton Plumbing and Heating Co., Trenton, N. J., \$11,446. Electric to Mercer Electric Co., Trenton, N. J., \$3,101.

Bell Telephone Building, Portland avenue, Atlantic City, N. J. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owner, Bell Telephone Co., Seventeenth and Parkway, Philadelphia. Brick, roughcast, 3 stories, 48x77 feet, steam heat, electric light, slag roof, cement floors, rolled steel sash, ornamental iron work. Contract awarded Irwin & Leighton, 126 North Twelfth Street, Philadelphia.

Concrete Street Paving, Woodbury, N. J. Owner, City of Woodbury, D. S. Davis, City Clerk, Woodbury, N. J. Contract awarded, Michael Staub, 47 South Broadway, Pitman, N. J., \$49,233.

Miscellaneous Construction News

Buildings, Somerville, Mass. Architect, Albert Kahn, Marquette Building, Detroit, Mich. Owner, Ford Motor Co., Detroit, Mich. Brick, concrete, cut stone, limestone, Assembly Building, 300x1200 feet, 1 story, Power House, 69x62 feet, 1 story, Oil House, 69x114 feet, 1 story, cement, tile, built up asbestos roof, cement, wood block floors, painting, waterproofing and dampproofing, ornamental iron work, iron stairs, bond, steel and kalamein doors, rolled steel skylights, tile and marble, terrazzo work, metal lath, caissons piles, pile driving, metal toilet partitions, metal corner beads, rubber tile floors, the following on separate contract, plumbing, electric work, sprinkler system, steel sash, steel sash operators, (structural steel work reserved). Architect taking bids, due August 5th.

Church (add.), Toledo, Ohio. Architect, Chas. Bolton & Son, Schaff Bldg., Philadelphia. Owner, Grace Reformed Church, C. T. Schwab, care of Jennison Wright Co., Toledo, Ohio, (Chairman of Building Committee.) Stone, 1 story. Owner taking bids.

Miscellaneous Contracts Awarded

Women's College Building, Durham, N. C. Architect, Horace Trumbauer, Land Title Building, Philadelphia. Owner, Duke University, Durham, N. C. Brick, cut stone, concrete, steel, steam heat, electric light, metal lath, tile and marble work, terrazzo work, rolled steel skylights, hollow metal doors, bond, ornamental iron work, iron stairs, green slate, slag, tile roof, cement and oak floors, metal book stacks, kitchen equipment, refrigeration plant, refrigerators, plumbing, flagstone, limestone, granite membrane waterproofing, dumbwaiter, painting and glazing, hardware, wrought iron pipe, Auditorium, 1 story and basement, 98x87 feet, Union Building, 2 stories 178x112 feet Class Room Building, 2 stories and basement, 178x48 feet. 2 wings 51x33 feet, Apartment House Building, 3 stories and basement, 178x56 feet, wing 62x27 feet. Contract awarded to Geo. A. Fullea, Morris Building, Philadelphia.

Church, Saranac Lake, New York, \$125,000. Architect, Charles W. Bolton & Son, Schaff Building, Philadelphia. Owner,

First Methodist Episcopal Church, Saranac Lake, N. Y. Stone, 1 story, 100x60 feet, slate roof, steam heat. Contract awarded Branch and Callana, Saranac Lake, N. Y.

Schools (alts.), Nos. 9, 10 and 24, Wilmington, Del. Architect, E. Miller, New York City. Owners, Delaware School Auxiliary Assn., DuPont Building, Wilmington, Del. General alterations and repairs. Contract awarded to C. J. Dougherty, 2515 W. 18th Street, Wilmington, Del. \$12,000.

Residence, Wilmington, Del. Architect, E. Wm. Martin, 2301 Spruce street, Philadelphia. Owner, Charles B. Holliday, on premises. Stone, cut stone, brick, stucco, 2½ stories, 41x20 feet, wing 14x17 feet, tile and tin roof, oak and pine floors, plumbing, wrought iron pipe, hot water heat, electric light, ornamental iron work, flagstone cork, composition, tile roof, integral waterproofing. Contract awarded Wm. M. Francis, West Chester, Pa.

School, Taneytown, Md. Architect, B. E. Starr, 9 N. 2nd street, Harrisburg, Pa. Owners, Board of Education of Carroll Co., M. S. Unger, Secty., Westminster, Md. Brick, 2 stories, 10 rooms, slag roof, pine floors, (heating, plumbing and electric work, separate bids) tile work. Contract awarded to E. E. Stuller, Taneytown, Md.

A SURVEY OF BRICKLAYERS' PRODUCTIVITY

BY ETHELBERT STEWART

United States Commissioner of Labor Statistics.

Early in 1923 the United States Bureau of Labor Statistics began an investigation of labor productivity or efficiency, in certain occupations in the building trades. Preparatory to this survey a conference of large building contractors and construction engineers from various cities of the United States was called. Elaborate questionnaires covering a large number of specific occupations and types of work were devised as the result of the conference.

The field investigation was conducted principally by special agent Paul H. Moncure of the United States Bureau of Labor Statistics, assisted occasionally by others of the Bureau's staff.

The investigation was commenced in Atlanta with the idea that it could be begun early in the year in a southern city. Atlanta was therefore the "try-out" city. This explains the large number of schedules from there as compared with other localities. The conference agreement was that not less than five schedules should be secured from each city of the sections of the study.

This being pioneer work, it was not expected that all details called for by the conference questionnaire could be readily secured from every building contractor; but making allowances for this, the "Try-out" was discouraging. Only new work was considered. At the very outset, carpentry work on frame buildings had to be abandoned, as there was no well defined unit of production.

As the investigation progressed from city to city it was found that in almost every line, local styles and types of mate-

rials used made it necessary entirely to abandon certain points of inquiry. For instance, while bricklaying was covered in fifteen cities, roofing was scheduled in only ten localities, and painting in only four. Painting was abandoned because it became more and more difficult to follow up the new work and because its various color schemes on some houses prevented the agents from getting adequate samples of straight way work. Composition roofing was found to be prevalent in some cities, and almost unknown in others, with the result that it was necessary to confine the study practically to bricklaying and pick up such other information from time to time and from place to place as could be obtained.

Notwithstanding the persistence of articles and interviews in newspapers and trade journals about relative inefficiency of labor as compared with former years, this bureau was unable to find a single building contractor, superintendent or foreman who had a record of work done per man hour on the jobs in progress or on any former job. It was necessary, therefore, for the agents of the bureau to locate building projects just begun or just about to begin and make arrangements with the responsible contractor to have the actual time of the men kept for the purposes of this report; and not only that, but to follow up each job day by day to see that the record was being kept.

Whatever interest the subject may have for interviewing purposes, it must be stated that the men coming in direct contact with the building work have very little interest in the time cost of occupations or trades in the building industry. I am publishing the material collected by the bureau for what it is worth as representing the pioneer attempt to secure the actual facts through impartial sources.

Bricklaying

The instruction to the agent was to secure the bricklaying time and labor cost per 1000 common bricks laid in a straight away wall without opening. This would seem to be a simple matter, but it was found that brick houses, so common a generation ago, are very difficult to find. Structures of hollow tile, of concrete and frame work, and of steel are being faced with face brick; but obviously those are too particularized in their plans, particularly as to the brick finishing part, that this work cannot be considered as ordinary bricklaying; and solid brick walls are very difficult to locate. In other words, the bricklaying of today is for the most part very different from what it was twenty years ago or even fifteen years ago.

However, it was possible to find at least five new jobs in each city visited on which common brick were being laid in straight away walls of sufficient dimen-

sion to justify taking schedules for them. The original questionnaire covered the question as to whether the bricklayer had to build his own scaffold; but as this was not found to be true in any case, it has been eliminated from tabulation. Another question referred to the placing of brick and mortar for the bricklayer, as for instance, foot level, waist level, etc. As the bricklayer was required to pick up the brick from his own foot level in every case scheduled except two, this has also been eliminated.

The highest labor cost per 1,000 brick in the wall (\$14.47) was found in Indianapolis, where an average rate of \$1.37 per hour resulted in a labor productivity of 95.7 brick per man per hour. It should be understood that this money cost is for bricklaying only.

The lowest average cost per 1,000 brick in the wall was found in Birmingham, where an average pay of \$1.16 an hour resulted in a productivity of 241 brick per man per hour.

The matter of trade union application of the workmen is shown, where such conditions were found, in the detailed table. Unionism appears to have had very little influence in a given trade in a given locality so far as bricklaying is concerned. For instance, eight of the establishments covered in Atlanta used union labor only. The average rate per hour was \$1.20. The average productivity on those eight jobs was 243.9 bricks per hour, with a money cost of \$5.50 per 1,000 brick in the wall. There were nine non-union jobs with an average of 97 cents an hour, a productivity of 142.9 brick per hour per man, and a labor cost of \$6.90 per 1,000 brick in the wall. There were six mixed groups, that is to say, both union and non-union men on the job—at an average hourly rate of \$1.05 per man, a productivity of 169.4 brick per man per hour, and a labor cost of \$6.44 per 1,000 brick in the wall.

In Chattanooga, nine union and two non-union jobs were scheduled. The union plans had an average rate of \$1.50 per hour, and productivity of 214 bricks per man per hour, and a labor cost of \$7.30 per 1,000 brick in the wall. The two non-union jobs paid an average of \$1.32 per hour and had a labor productivity of 280.8 bricks per man per hour and a labor cost of \$4.81 per 1,000 brick in the wall.

In Norfolk, the eight union jobs scheduled paid an average of \$1.37½ per hour and had a productivity of 219 brick per hour in the wall and a labor cost of \$6.38 per 1,000. In the case of non-union jobs the rate per hour was not obtainable and hence the cost per 1,000 brick in the wall could not be derived. The productivity per man per hour was 282.4 brick.

In Chicago 10 union jobs were scheduled paying an average of 1.56 per hour,

with a productivity of an average of 161.9 brick per man per hour and a labor cost of \$10.28 per 1,000 brick in the wall. Three strictly non-union jobs were scheduled, paying \$1.52 per hour and having a productivity of 128.6 brick per man per hour and a labor cost of \$12.15 per 1,000 brick in the wall. There were eleven jobs scheduled operating under the Landis Award, which permits the employment of either union or nonunion men. The average pay was \$1.60 per hour and the productivity was 159.7 brick per man per hour; the labor cost was \$10.48 per 1,000 brick in the wall.

In Atlanta the average number of brick laid per 8 hours was found to be 1,482.4 on the 23 jobs investigated. On 10 similar jobs in Indianapolis the average number of brick laid per day was 765.6 and in Minneapolis and St. Paul 1,545.6 brick were laid per man per day on 21 jobs. In other words, it was found that in the two cities in which open shop bricklayers did a percentage of the work the average efficiency of both organized and

unorganized labor was double that found in at least one city in which union labor has control. The reports from other places seem to bear out this generalization.

Strange to relate, the difference in efficiency found on the jobs in the same city was no greater than the difference in the average productivity of all the jobs in some different cities. While in localities in which work is done extensively on the open shop basis, the men on non-union jobs in such localities did not show any noticeable superiority over those on the organized operations. Perhaps the open shop mechanics set the pace and the union men on other jobs worked just as fast or a little faster, if possible.

In the strictly closed shop towns are found the lowest output and the highest cost for brick work. A lack of variation in performance also exists, which might indicate artificial control of work done. At any rate, it appears from the evidence gathered through this unbiased source that the open shop tends to heighten the productivity of bricklayers.

City	Number of Schedules	Average Rate of Pay Per Hour	Number of Brick Laid Per Hour	Cost Per Day of Eight Hours	Cost Laying 1,000 Bricks

CRUSHED LIMESTONE AND TILE WASTE GOOD FOR CONCRETE

Good concrete can be made from crushed limestone or hollow tile waste, the Bureau of Standards, Department of Commerce, finds. The only drawback to the use of such material is the angularity of the pieces, which makes the concrete flow less readily and makes it harder to handle by the methods used in large construction enterprises. This drawback can be remedied by oversanding, the Bureau believes.

Large quantities of waste material accumulate around quarries producing dressed limestone, and the same is true of plants manufacturing hollow tile. An investigation was undertaken by the Bureau of Standards to see if this material could not be used for concrete. Test cy-

linders were made up, using several standard proportions, and using as the coarse aggregate limestone in some of the cylinders, crushed tile in others, and Potomac river gravel in others. The other conditions were made as nearly the same as possible. In the tests the limestone concrete proved slightly weaker than the gravel, and the tile concrete about one-fourth stronger.

A certain wallboard man advertised in the Guide for awhile and then dropped out. We've had a dozen inquiries since then, asking for his address—every inquiry from a cash buyer. This is a common occurrence. It's hard to make some advertisers see the vital importance of a standing "ad."

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Insurance Company of North America

PHILADELPHIA

*Indemnity Insurance Company of North America
write practically every form of insurance except life*

A 355,000 Gallon Reservoir in This Building Is Waterproofed with "ANTI-HYDRO" Plaster Coat

What could be more convincing of the water-proofing qualities of "ANTI-HYDRO" than the fact that a plaster coat gauged with "ANTI-HYDRO" and water permanently waterproofed the huge concrete reservoir in this building. A smaller concrete reserve tank under this same building is also water-proofed with "ANTI-HYDRO."

"ANTI-HYDRO" is easy and economical to use. It both hardens and waterproofs concrete in one operation. Being a liquid integral agent, it mixes readily with the gauging water without the aid of skilled labor, and insures uniformly hard and waterproof concrete, through and through. Satisfaction guaranteed.

Twenty-one years of continuous use have established the permanency of "ANTI-HYDRO" results. Use it on your next job.

Van Sciver Service

Months Ahead of Schedule

REMARKABLE progress has been made on the concrete construction in the two sections of the Broad Street Subway extending from Stiles to Courtland Streets. Both contractors should be highly commended for their splendid efforts.

Each of the concrete-mixing plants, pictured, was especially designed and constructed by the contractors to turn out the maximum yardage of concrete.

Concrete sand and graded gravel are served to these batch plants, day and night, without interruption by a section of the Van Sciver fleet of heavy duty motor trucks.

THE VAN SCIVER CORPORATION

scores again!

The Keystone State Construction Co. and Patrick McGovern, Inc., the firms holding these contracts, selected Van Sciver Service for its dependability, when concrete sand and graded gravel were required in vast quantities.

Van Sciver Service, in the minds of contractors and builders, means first quality materials promptly delivered.

Residences (2), Rodney street, Wilmington, Del., \$12,000. Owners, Newport Land Co., Industrial Building, Wilmington, Del. Contract awarded to Patrick Fahey, 122 North Clayton street, Wilmington, Del.

Don't be a Rip Van Winkle. Advertise and let everybody know you are awake and abreast of the times.

WHO PAYS FOR ADVERTISING?

Somebody has to pay for all that expensive advertising—you have heard that phrase more times than a few. It rises up as a bugaboo in the minds of some men who don't stop to figure out what it means.

Somebody has to pay for all those expensive salesmen, too and for all that expensive machinery in your plant and for all those expensive cartons. Which one of them will you do without, in order to get your prices down?

Without the salesmen your distribution will weaken. Without the expensive machinery your cost of production will mount up. Anything that reduces cost, whether it be efficiency in operation, or increased sales that reduce overhead, has to be paid for. But if it is paid for out

of savings in cost it becomes an economy.

It is possible, in other words, to add certain expenses to your business which destroys expense. Advertising, properly considered, and properly carried out, is that kind of an expense. It can simplify distribution problems, increase distribution. Not in a minute, there is no miracle working power about it. But good advertising, consistently carried out, does that thing.

When the paint and varnish manufacturers of this country began advertising the idea "Save the surface and you save all," they hoped to double their business in five years. That time is not up yet, but at the end of three years they were within twelve per cent of having reached their goal. They have forty per cent. of their time limit in which to reach twelve per cent. of their volume limit. If you, in your own business, can increase your volume eighty-eight per cent in three years, are you going to have to charge the consumer more for the product, to pay for advertising? Or are you going to be able, instead, either to charge him less, or to show a bigger profit in the business.—*The Associated Contractor.*

Simplification of clay bricks in this country is being watched with considerable interest by the clayworking industry in Great Britain, according to information reaching the Division of Simplified Practice, Department of Commerce, under whose auspices the American clay industry reduced 39 sizes of rough face brick to 1, 36 sizes of smooth face brick to 1, and 44 sizes of common brick to 1.

The British brick industry, it is indicated, is in much the same position as was the American brick industry when simplification was undertaken. While nominal standards were adopted two decades ago, there has been a lapsing of adherence to such standards, and today a number of variations in dimension are found—particularly in the thickness of bricks produced in various districts.

The *British Clayworker*, in a recent issue, has this to say about the problem: with a view to increasing production and

"In America, ideas as they present themselves in important industries, are followed up by means of investigation, sale, and reducing, and the matter of standardization is receiving close attention in all classes of manufacture.

"Within the last few years road paving the efforts of the National Paving Brick bricks have been under scrutiny and by Association manufacturers have been brought into line with the effect of reducing 66 varieties down to five. Facing bricks have similarly been reduced from 36 varieties to one class, and variations in dimensions have been ruthlessly ruled out.

"So important is the necessity for economy in production in these days that we should all look around to see if action of this kind would not benefit the brick trade as much as it has undoubtedly benefitted the motor trade, and will, it is claimed, simplify the housing problem.

"We have London stocks, wirecuts, pressed bricks, sand faced facing bricks, smooth facing bricks, and lime sand bricks, produced in different districts by different methods from different raw materials. Where we are, however, inconsistent, is in the dimensions or rather one dimension of the bricks made, and in this direction standardization would have been of immense value during the last two years, and would be during all the period of intense production and large demand.

"It is impossible for the qualified observer to understand why bricks should be produced to varying thickness in various districts. We have the standard of $2\frac{5}{8}$ inches, fixed some 29 years ago by the efforts of the Institute of Clayworkers in conjunction with the Royal Institute of Brick Architects, and yet we find bricks in the Midlands and North made in $2\frac{7}{8}$, 3 and $3\frac{1}{8}$ inches in thickness and in Scotland $3\frac{1}{4}$ inches. No one can explain why these differences arose and why they are so stubbornly maintained.

"There is no advantage that can be advanced for the greater thicknesses than the agreed standard, and every possible reason why the standard should be universally adopted.

"When we compare the English sizes with those adopted in other countries, the anomaly is made still more striking, because we were among the earliest makers, and have increased sizes, while they, in following in our footsteps, have reduced them. * * * Brickwork is cheaper in all these countries than in ours, so it is evident that thickness does not spell cheapness of building. The bricklayer prefers and welcomes smaller brick and does more work with it. The brick manufacturer has his drying and burning problems simplified, besides the greater ease of handling. Waste is also reduced. * * *

"The present time is one when standardization of brick sizes throughout the country would be an easy matter. It would give satisfaction to everyone, and dissentients would be forced into line with all others by the imperative necessity of buying what was offered, if they wished to continue in business. The benefit to the trades concerned would be great from an economic standpoint, and from an aesthetic standpoint the improved appearance of brick work generally would be of great value. * * * Let us then take the opportunity and standardize so that all bricks in the country are of one uniform size."

Recent surveys by the Division of

Simplified Practice in the brick industry of the United States indicate that there is a very general adherence to the simplified sizes in this country, except in a very few isolated cases where brick yards are producing for special demand in addition to their filling of orders for the recognized sizes.

It is further indicated that the clay brick industry is stimulated to a closer adherence to the simplification program by the fact that other brick materials have been brought under Simplified Practice to adopt a single size, which makes for a keener competition as to quality, service and price, and which also makes it incumbent upon brick manufacturers to safeguard the benefits of simplification by not breaking away from the recognized sizes.

Members of the Philadelphia Operative Builders' Association are planning a campaign to enlarge the activities of the Association. A suite of rooms has been leased in the Lincoln Building which will be the headquarters of the Association, where members will be able to transact their business, and information furnished the public on the housing situation. Offices of the Home Building Exposition will also be provided so that all departments of the Association can function under one roof.

At the quarterly meeting of the Association held at the Pennsylvania Hotel George H. Detweiler resigned as secretary, after ten years service, and Ernest H. Crowhurst was elected to succeed him. The latter will continue his duties as Manager of the Home Building Exposition under the supervision of the Exposition Committee, with John N. McGarvey as Chairman.

The report of the 1925 Exposition, which was read by Chairman McGarvey was most gratifying, and a rising vote of thanks was accorded the members of the Exposition Committee for the most successful show in the history, not only of the Association, but ever held in this city. Plans were adopted for the Fifth Annual Exposition, which will be held during the second week of February, 1926.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

"Go easy on the hot water, son, I want a bath, too"

A frequent admonition in many unfortunate households—the homes that have a skimpy supply of hot water. These days, when frequent bathing is such a necessity, certain members of the family have to bathe in cold water—unless they beat the rest to the tub or shower.

Hot water worries do not exist in houses equipped with the

NOVELTY TANK HEATER

Think of 40 gallons of steaming hot water constantly on tap at a cost of less than 5 cents a day! Think of a little heater that burns less than a bucket of pea or buckwheat coal every 24 hours—yet keeps on the job day and night supplying baths for *all* the family—and for all the family dishes and laundry, too!

The Novelty needs but a minute's attention night and morning. Low in first cost—lasts a lifetime—quickly installed—costs one-fourth as much as gas to operate. (This is unprejudiced for we make both kinds.)

Install the Novelty with its brick-lined fire-pot, baffled water-way, two-bar rocking grate, and reinforcement rods at the sides. We are advertising extensively in Philadelphia newspapers, and this modern hot water supply system will find ready acceptance with your customers.

Get all the facts—now! Write or phone today for complete information. Address Dept. B G8.

THE "SCIENCE" OF HOUSE PAINTING

By C. A. KNOWLES

It is surprising how many houses have their outside appearance hurt by a faulty color scheme. Many who recognize the necessity of carefully planning their interior decorations neglect the opportunity for individual expression that the exterior of their home affords.

When considering a color scheme keep these two points in mind: which scheme will make the house as a unit the most interesting and at the same time not be hurt or injure the appearance of houses near.

The color scheme of the house covers not only the color of the walls, the trim and the roofing but just how much contrast is to be worked in. Having decided all of this, the question arises as to whether the windows and sashes shall be the same color as the shutters? Shall the moldings be the same color as the main surface, or shall they be the same color as the windows; and what about the front door?

Every house needs an individual treatment. When planning the scheme the architectural and landscape features should be taken into consideration. A low rambling house, for instance, needs to be painted so that the apparent height will be increased. The width must not be accentuated by painting in any contrasting tones running crosswise. The tall, narrow house built on the narrow lot needs just the opposite treatment.

The number of windows in the house has to be considered too. If there are a great number of openings, they must not be made conspicuous or they will make the exterior seem broken up and confusing. On the other hand if there are large wall surfaces with few openings, the exterior may be given character by the window and shutter treatment.

Take the type of house that is so popular all over this country, the Colonial house. While it is painted white with green blinds the most often, there are a dozen other combinations just as pleasing if not as characteristic.

If the house is small, cream with a chocolate brown roof is pleasing. Beaver brown, with cream blinds, brown door panelled in cream, the rest of the entrance in cream with an opalescent roof, red brick house with green shutters and ivory entrance, opalescent roof, sand colored brick house with gray-blue shutters, door and entrance detail, roof combination of two colors: cream stucco walls, white window casings, beaver brown shutters, door and roof: these combinations are all good. If it seems desirable to introduce an unusual note with cream or gray walls robin's-egg blue—a color that improves with time—gives a charming effect, when used for doors or shut-

ters. If the house is small the color of the foundation and chimneys has to be taken into consideration lest it produce a jarring note in the color scheme.

In regard to the roof the rule is to keep the trim and shutter treatment conservative if the color of the roof is pronounced. The drab roof is not being used any more. Now something more is asked of the roof than it shut out rain and weather. It has a threefold mission; besides its utilitarian function, it should suggest shelter and add to the general attractiveness of the home.

The colored roof wisely chosen often relieves monotony, adds individuality, and creates the "atmosphere" of the home to a great extent. The reason that the roof is so important in the color scheme is that its size and position make it conspicuous. It is always the largest unbroken expanse of the house and for that reason has an opportunity of setting the color keynote.

Colors bring their own definite reactions. A fresh blue-green roof arouses a feeling of rest and coolness; the roof in two tones of brown or red creates an atmosphere of warmth. It is only when the roof is in harmony with the rest of the house that it contributes its full share of beauty to the home.

For years, one's choice of color in shingles was limited to plain colors such as black, red and green. Now almost any color desired can be had. Shingles are often dipped to match a particularly desired tone that the individual desires. In the slate surfaced shingles there are four new effects: opal, bronze, mosaic, tapestry tan, and onyx where weathered brown is blended with other colors on the same shingle produces an artisticness.

Another point to remember in choosing the color for the roof is that the treatment that is so perfect on your neighbor's house may be a flat failure on your own English cottage.

There are rather definite principles of color harmony which determines all good effects. There are two general treatments of the roof color: it may be selected either to contrast well with the color of the house or to blend with it. The treatment chosen will depend on whether it is wished to emphasize or subdue the roof as a part of the architectural scheme.

A practical way to actually test the color scheme that you are planning on your house is to obtain from a paint manufacturer colored circulars showing houses and roofs in various colors. Cut the roof from the house that you choose and using it as a pattern, cut a number of roofs from the roofing shown and slip them on the roofless house. In this way one can gain a very good idea of what the effect will be like.

There is a right and wrong time to paint just as there is to plant the garden

or trim the fruit trees. If a house is painted before the plaster has dried out unless unusual pains are taken to ventilate the house, much of the moisture in the plaster will force its way through the siding or clapboards. This will cause the paint to blister and peel. Painting before the basements have had a chance to dry out has the same effect.

In painting a new house, all knots and pitchy, sappy places should first be given a brush coat of shellac. This heals the surface and prevents the pitch coming through the paint later on. Nail-holes and cracks should not be puttied until after the priming coat.

Where the building has been previously painted, the surface should be absolutely free from dirt, dust, and grease

before the painting is started. The paint will not hold if the surface is not clean. Of course, old, loose paint should be taken off with a stiff wire brush or scraper. (If the condition is very bad, it may be necessary to use the painter's blow torch to remove it.) When the paint is on good, but the surface is dirty, it is advisable to wash it. To do this, use pure linseed oil soap or ivory soap and water applied with a sponge. The surface must not be painted until it is perfectly dry.

It is possible for unfavorable weather conditions to spoil a job. If a rain is threatening the paint job should wait as a hard rain can ruin a newly painted surface. The hot, summer sun beating down on fresh paint has tendency to blister it. When painting in the summer it is a good plan to work in the shade.

A painter will caution the beginner to keep the paint stirred to a uniform consistency and not to apply it too thick lest it peel. If it is applied too thin it is transparent. The brush stroke is from left to right and back again, using firm, heavy strokes so that it is brushed thoroughly into the wood.

Many skilled painters regard the priming coat as the most important coat. The priming coat is of especial importance on new buildings for it is the foundation coat applied directly to the wood, and all subsequent coats that are applied to the surface are dependent upon it for satisfactory results.

The priming coat must be of as high quality as any other, but of thinner consistency.

The best way is to use the same paint for priming that will be used for finishing coats, but reduced with linseed oil and turpentine.

The second coat on the new house will want to be reduced with linseed oil, too, to produce sufficient oil to fill the pores of the wood and still leave an ample amount of oil to bind the paint pigment. The addition of turpentine to the first coat insures proper penetration, and to the second, cuts the gloss and provides a "tooth" to assist the following coats to adhere to. The first coat should never be applied to an absorbent surface without having some turpentine in it.

One coat should not be allowed to stand until it has become bone hard before the following coat is put on. If allowed to get too dry the next coat will not stick as well.

On new work, the priming coat is usually counted as one coat, three coats being needed for a really good job. For repaint jobs, two coats are generally sufficient.

Many feel that in the town or city, where the air is filled with smoke, one coat put on at reasonably frequently intervals is the best plan.

Painting stone, stucco or brickwork presents a different problem in each instance from painting wood.

—*Keith's Magazine.*

POINTERS ON APPLYING PORTLAND CEMENT STUCCO

Properly mixed and applied, portland cement stucco provides an exterior wall covering unequalled for beauty and durability. As with other materials of construction, success in its use requires the observance of certain fundamental principles.

A firm unyielding base upon which to apply the stucco is of first importance. Concrete masonry is ideal in this respect, providing, as it does, a permanent base to which the stucco clings tenaciously. Concrete block and building tile used for the purpose should preferably have a rough, coarse texture to provide a good key or mechanical bond as well as a certain suction which aids in the application of the stucco. Mortar joints should be cut flush with the wall surface and left unpointed to secure additional bond.

Just before applying the first coat, dust and loose particles should be brushed off and the wall surface wetted sufficiently to prevent the absorption of water from the stucco. Wetting, however, should not be continued until water remains standing on the surface, for this results in a loss of suction and makes application more difficult.

For all coats, mortar mixed in the proportion of one sack of portland cement (one cubic foot) to three cubic feet of sand is considered most satisfactory. Hydrated or well-slaked lime is sometimes added to give the mixture greater plasticity, but the amount should never exceed 10 pounds for each sack of cement used. Exactly the same proportions of cement, sand, water, coloring matter, and other ingredients must be used in successive batches for the same coat in order to give the finished surface a uniform appearance.

Thorough mixing of all batches is essential. The recommended procedure is to mix the cement and sand dry, preferably with a machine mixer, until the mixture is of uniform color throughout. Then only enough water should be added to produce, after thorough mixing, a mortar that is plastic and workable. Limit size of batches so that any one batch can be applied in 30 minutes or less.

Sand used in portland cement stucco mixtures should be clean, well graded and pass through a screen with 8 meshes to the linear inch. Dirty sand should be avoided, as it weakens the mixture and may result in a streaky finish. Clean water is, of course, necessary.

Carry on the plastering in one general direction without allowing mortar to dry

along working edges. Each coat should be roughened or scratched before it hardens to provide key for the next coat. The number and thickness of coats to apply will depend somewhat on the evenness of the base and the finished texture it is intended to produce. A combined thickness of not less than $\frac{5}{8}$ inch is advisable whether stucco be applied in two or in three coats. The finish coat is usually not applied until the previous coat has been on a week. Sprinkling the surface for three or four days after stucco is applied to assist in proper curing is considered good practice.

For obtaining colored finishes use only mineral pigments. Other pigments are likely to fade and reduce the strength of the stucco. In no case should the amount of color pigments exceed 10 per cent. of the weight of the cement used. In other words, do not use more than nine pounds of color to one sack of cement (94 pounds.) The addition of larger amounts is likely to reduce the strength of the resulting mixture.

Variations in the color of the cement, aggregates and in the pigments themselves are such as to make color formulas only approximate. Best results are obtained by experiment or trial. The proportion of coloring matter to cement to produce the exact shade may be determined by preparing a number of small mortar panels which should be made of the same materials and proportions as are intended to be used in the actual work. Store the samples for about five days under conditions similar to the actual work. Then the shade desired for the work may be selected and the proper amount of coloring pigment ascertained.

Texture as well as color plays a prominent role in achieving harmonious and artistic surface effects. The underlying motif of all textural finishes in a plastic material is a frank display of the technique of application. The marks of the trowel, the float and other tools used in the trade should be accentuated, rather than concealed, akin to the distinctive touches supplied by the artist's brush marks on the surface of an "old master."

—*Concrete House Magazine.*

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Insurance Company of North America

PHILADELPHIA

and the

Indemnity Insurance Company of North America write practically every form of insurance except life

A 355,000 Gallon Reservoir in This Building Is Waterproofed with "ANTI-HYDRO" Plaster Coat

What could be more convincing of the water-proofing qualities of "ANTI-HYDRO" than the fact that a plaster coat gauged with "ANTI-HYDRO" and water permanently waterproofed the huge concrete reservoir in this building. A smaller concrete reserve tank under this same building is also waterproofed with "ANTI-HYDRO."

"ANTI-HYDRO" is easy and economical to use. It both hardens and waterproofs concrete in **one operation**. Being a liquid integral agent, it mixes readily with the gauging water without the aid of skilled labor, and insures uniformly hard and waterproof concrete, through and through. Satisfaction guaranteed.

Twenty-one years of continuous use have established the permanency of "ANTI-HYDRO" results. Use it on your next job.

Brick, 2 stories, 14x12 feet, slag roof, yellow pine floors. Contract awarded to William Hoyt, 1244 North Palethorpe street, Philadelphia.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

Pennsylvania Construction News

ston, N. Y. Electric wiring, George Sherman, Kingston, N. Y.

THE PRODUCTION AND USE OF RAIL STEEL REINFORCING BARS

By F. C. MACKEY

It would not be possible without a difficult and tedious examination of mill reports to determine with any exactitude the total production of rail steel reinforcing bars. They were certainly used extensively in the years following 1900.

In 1913 a report was published by the A. S. T. M. on the quality of material rolled from rails in five different mills. In the year 1924 there were twelve rail steel mills whose total production of reinforcing bars amounted to more than 200,000 tons. We may gain some estimate as follows:

The records of the building industry show a fairly uniform increase in volume of construction since 1900. If, then, we accept 200,000 tons as the production of reinforcing bars in 1924 and neglect any production prior to 1900, it is a simple arithmetical problem to show that in twenty-four years it is quite probable that 2,500,000 tons of rail steel reinforcing bars have been used in the building industry.

In general 100 pounds of bars are needed to reinforce one cubic yard of concrete. This means that probably 50,000,000 yards of concrete have been reinforced since 1900 with rail steel reinforcement.

To put it in another way. One of the largest warehouse jobs would consume 2500 tons of reinforcing bars. So that since 1900 these reinforcing bars would account for almost 20,000 acres of floor space, would reinforce 500 large warehouses or 1,000 of ordinary size.

These quantities are, of course, only estimates but they will serve properly to indicated the wide-spread use of rail steel reinforcing over a period of twenty-five years.

The use of rail steel reinforcing is increasing. There is a growing confidence in the reliability and usefulness of these bars.

One of the latest applications is a reinforced concrete railway bridge built by the Cincinnati Rapid Transit Commission representing extremely long spans and a bold design. United States army engineers are using rail steel reinforcing in the new reservoir for the City of Washington, D. C. Sears, Roebuck & Company, in their new buildings at Kansas City, consisting of a million and a half square feet of floor space, are using 5,000 tons of rail steel reinforcing. The new Produce Market in Chicago specified 3,000 tons; the new Hibbard, Spencer, Bartlett & Co. hardware warehouse specified 2,800 tons; the new addition to the Furniture Mart 1,000 tons;

the new South Shore Hotel 1,000 tons. Additional uses are in the 35,000,000 gallon reservoir for the City of Cincinnati, the great Hilliard Road bridge in Cleveland, new water works for the city of St. Louis, huge elevators in Buffalo and many important works in the south. It would appear, therefore, that the estimate of 200,000 tons for 1924 is likely to be more than doubled in the year 1925.

During the last twenty years the practice in rolling and use of rail has been improved. Since the year 1910 rails of open hearth manufacture have almost entirely displaced Bessemer rails. The rail mills are studying the metallurgy of their industry, changing their furnaces and equipment and improving their product by keeping pace with modern practice.

Not only is this growing use of rail steel to be attributed to an increased confidence of the public and records of success in its use, but there is considerable saving of money to the user, amounting to perhaps \$2,000,000 a year on the price of the reinforcing bars.

These reinforcing bars are cut and bent to shape, bundled and marked ready for insertion at the proper place in the structure. This service is supplied by the mills in connection with the sale of the bars.

It must be recognized that this rail steel reinforcement industry is competitive with other industrial organizations and the growth of the use of rail steel has been met with opposition. The nature and technical properties of the material have been misrepresented and minor difficulties that arise in the use of all manufactured materials have been magnified and distorted. The Rail Steel Products Association "tended to its knitting" and for years submitted to unprovoked attacks. This association is now in process of putting the plain truth before the public.

Unfair attacks have aroused the satisfied users of rail steel to testify as to their experiences. One construction company in the last ten or twelve years has used thousands of tons of this material according to the specifications of the A. S. T. M.

Three thousand tons alone were used on the important Soo line elevated railroad terminal in Chicago where the stress requirements are extreme. It is one of the finest pieces of work of the kind in the entire country. This construction company says that its experience has been wholly sufficient to prove the true worth of rail steel reinforcing which further offers a great saving to owners, not only in the direct business relations with mills but in the prevention of a closed market.

The Hebrew Institute building in Chicago, with arches of 65 foot span, designed by an expert engineer thoroughly trained in foreign practice; the Fenway garage, Boston, Mass.;

the Atlantic terminals, Canal Zone, Panama; D. L. & W. Ry. dock at Hoboken, N. J.; numerous bridges and large sewers, grain elevators in Canada and the United States; the Ohio stadium, Columbus; Detroit Ball Park; the Larkin Terminal Warehouse at Buffalo, N. Y.; the Goodyear Tire and Rubber Co., at Akron, O.; laboratory building of the General Electric Company, Schenectady—all these have used rail steel reinforcing. Many hospitals and hotels can be cited. The highest chimney in the world, in Japan, 575 feet high, is reinforced with bars rolled from steel rails.

Not only is there no record of any failure or accident due to the use of rail steel, but one experiment on the Western News paper Union Building in Chicago was made to determine its strength before it was to be wrecked. In the process of wrecking the building rail steel reinforcing bars were uncovered and found in perfect shape.

This rail steel is not only used for reinforcing concrete but finds its use in angles and other structural shapes of buildings and various uses in the agricultural implement industry.

Apart from the scientific tests of laboratories which are, of course, limited in scope, the record of use is sufficient evidence of the suitability of the material which is now being produced by such mills as the Franklin Steel Works, Franklin, Pa.; Calumet Steel Co., Chicago; Burlington Steel Co., Hamilton, Canada; Pollak Steel Co., Cinn.; Buffalo Steel Co., Tonawanda, N. Y.; Laclede Steel Co., St. Louis; Western Virginia Rail Co., Huntington, W. Va.; Southern Steel and Rolling Mill, Inc., Birmingham, Ala. These mills have organized an association to study the technical properties of the product and its uses.

The facts cited above ought to be sufficient to remove any doubts remaining in the minds of those architects and engineers who are necessarily removed from the centers of large building projects, and who are likely to be misled by irresponsible conversational statements.

ARCHITECTURE AND ANTHRACITE

A brochure just published has the alliterative and attractive title "Architecture and Anthracite." It is a booklet which in its twenty pages with many illustrations gives much valuable information and many practical suggestions toward providing architecturally satisfactory and economically sound results in designing and specifying for heating installations.

The chimney, admittedly one of the most important features of a home and its heating equipment, is one theme in this publication by the Anthracite Industry in the interest of better combustion of its various sized coals. The booklet al-

so gives some very valuable data including a table for figuring the size and height of chimneys for various installations, as prepared by the American Society of Heating and Ventilating Engineers in their preliminary draft of a code for Heating and Ventilating Buildings. A special column rates the "effective area" of each rectangular flue as compared with its actual area.

With illustrations showing approximately designed and well proportioned chimneys as well as "horrible examples," Albert Kelsey, Architect, and co-designer with Paul P. Cret of the Pan-American Building, Washington, has prepared an article on the "Chimney as an Object of Interest and Beauty." In this Mr. Kelsey emphasizes the economic import-

ance of the chimney from its practical functioning through adequate draft as well as from the aspect of architectural adornment.

Diagrams of the Standard sizes of Flue Linings are also shown to enable architects, and engineers to specify the correct size and allow for the exact dimensions. In order to assist in proper construction of the chimney a specification for chimneys as recommended by the Eastern Clay Products Association is also included in "Architecture and Anthracite." By compliance with this specification through the short form as published, designers can insure a chimney soundly built and in accordance with the ordinance of the National Board of Fire Underwriters and the proposed code of the American Society of Heating and Ventilating Engineers. This includes a smoke test on each flue.

While the chimney is of great import-

ance other features which should be given fullest consideration in designing, specifying and constructing are covered, in this booklet, by D. Knickerbacker Boyd, of the firm of Boyd, Abel and Gugert, Architects, of Philadelphia, who discusses many of them in an article entitled "Designing and Planning for Home Heating Economies." Mr. Boyd calls attention to the responsibility of architects and such builders as construct and sell dwellings without architects, for specifying and seeing that six things are provided for the home owner, namely:

First—Adequate size and height of flues for all heating and cooking apparatus.

Second—Proper location and construction of all chimneys.

Third—Correct specifying and installing of heating and cooking apparatus to utilize small as well as large sizes of coal.

Fourth—Economic location and sound

construction of coal bins.

Fifth—Providing convenient facilities for the removal of ashes.

Sixth—Making walls, roofs and openings tight.

Mr. Boyd describes these matters in detail and stresses the importance of not only making the various features of the home and heating equipment as artistic and practical as possible but also the most economical in operation and maintenance.

The appropriate use of Anthracite Coal is brought out in an article "Small Size Anthracite Fuel and Equipment for its Economical Utilization," by C. A. Connell, Combustion Engineer. In this article Mr. Connell outlines possibilities of making great savings in the Fuel bill by use of approved apparatus and methods for burning buckwheat coal.

"Architecture and Anthracite" may be obtained from Anthracite Coal Service, 260 S. Broad St., Philadelphia, Pa.

The great volume of construction being carried on in the United States shattered all previous monthly records for the third time this year in July when the high marks set in May and June were topped. Statistics compiled by the Associated General Contractors of America show the index number based on 1913 to be 220. The total volume of construction performed during the first seven months of 1925 was five per cent. greater than that recorded for the corresponding period of 1924.

Despite this unprecedented amount of construction, the aver-

age of construction costs in the principal construction centers of the United States remained stationary during July at index number 201.

The volume of building contracts awarded during June was considerably above that recorded for the same month in any year on record. The volume of building permits was about equal in June to the volume in May.

Concrete surface awards, including streets, alleys and roads, for the first half of 1925 exceed by twenty per cent. the corresponding figure for last year.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Every Morning You Get the "Leads" that Lead to Business

THE man who has a prospect list of concerns in the market for what he sells certainly has a distinct advantage over the man who must dig around for his leads.

You can have this advantage by subscribing to the

Daily Building News

a daily, authoritative compilation of advance construction news, contracts awarded and other vital information together with names, addresses of interested parties.

It's a service that repays you many times its cost.

Give us a ring today and we will explain fully and tell you how little this service costs.

**“There’s not a drop of Hot Water, Dad--
Won’t you Please get us a Tank Heater?”**

This young lady has a right to complain. Hot water is so easy to supply these days in BIG QUANTITIES with a Novelty Tank Heater, that there is little excuse for running short. The families that have put in these famous little heaters have rid themselves of hot water worries forever—and houses equipped with them are more acceptable to tenants.

Nothing could be simpler to operate than the

**NOVELTY
TANK HEATER**

A shovelful of pea coal or buckwheat coal morning and night keeps a FORTY GALLON tank constantly full of steaming hot water. Moreover, it does this at but 5 cents a day—one-quarter the cost of gas. (This is unprejudiced, for we make both kinds.)

We were the originators of this type of coal tank heater, and there are now imitations. Install the NOVELTY with its brick-lined fire-pot, baffled water-way, two-bar rocking grate, and reinforcement rods at the sides. Look for the name Novelty on the door.

PLENTY of hot water for bathing, for laundry work and for the kitchen is needed in the average household—a 40-gallon tankful all the time—and the Novelty is designed to supply it.

Get all the facts—now! Write or phone today for complete information. Address Dept. BG-8.

ABRAM COX STOVE COMPANY

Factory and Show Room, American & Dauphin Sts., Phila. Established 1817

(Take Frankford “L” to Dauphin St. Station)

Concrete block, stucco, brick, 2 stories and basement, 28x50 feet, structural steel, steam heat, electric light, built-up roof, pine floors, plumbing, miscellaneous iron work. Owners, care of John Jenkins, 228 Ohio avenue, Shenandoah Heights, Pa., taking bids.

Store and Apartments (2), Port Reading and Morris road, Ardmore. Architect, J. Ethan Fieldstein, Otis Building, Philadelphia. Owners, Salason & Freed, Franklin Bank Building, Philadelphia. Brick, stucco, 2 stories, 20x56 feet, 20x46 feet, slag roof, hardwood floors, hot water heat, electric light, tile work, flush bulks, metal ceilings. Owners ready for sub-bids.

School (alts. and add.), Bethlehem, Pa. Architects, Ritter & Shay, North American Building, Philadelphia. Owners, Board of Education, Bethlehem, Pa. Preliminary plans in progress.

Apartment (alts.), Lancaster, Pa. Architect, M. R. Evans, 10½ East Orange street, Lancaster, Pa. Owner, J. J. Bair, 446 East King street, Lancaster, Pa. Brick, 2½ stories, oak floors, electric light, tile work, general alterations. Owner will take bids in ten days.

School, Manheim, Pa. Architect, H. Y. Shaub, 20½ North Queen street, Lancaster, Pa. Owners, Manheim School Board, care of architect. Brick, steel, 1 story, 200x100 feet, maple floors, electric light. Plans in progress.

School (add.), Lancaster, Pa. Architect, C. Emlen Urban, Woolworth Building, Lancaster, Pa. Owners, Lancaster School Board, K. Johnson, president, Administration Building, Lancaster, Pa. Brick, 2 stories, 25x40 feet, slate roof, electric work, plumbing (heating, plumbing and electric work separate bids). Owners ready for bids.

School, Allentown, Pa. Architects, Rhue & Lang, Allentown, Pa. Owners, Board of Education, P. Werner, Allentown, Pa. Brick, steel, 2 stories and basement. Owners taking bids due September 8th.

Main Cell Building, Rockview, Center County, Pa. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Board of Trustees, Western State Penitentiary, North Side of Pittsburgh, Pa. Furnish and install underground steam units and return, electric fixtures and electrical materials delivered f. o. b. cars Rockview. Enamel brick, including special shapes, f. o. b. cars Rockview. Certified check 10 per cent. or bidder's bond 50 per cent. Surety bond 50 per cent. of contract price. Owners taking bids due September 2nd at noon (Standard Time). Plans may be secured from owners, architect, or supervisor of construction, W. T. Grange Const. Co., 803 Keenan Building, Pittsburgh, Pa.

Residence, Second and Division streets, Harrisburg, Pa. Architect, C. J. Lappley, Ebner Building, Harrisburg, Pa. Owner, Paul Doutrich, Front and Boas streets, Harrisburg, Pa. Brick, 2½ stories, 30x45 feet, slate roof, hardwood floors, hot water heat, electric light, tile work (heating reserved). Architect taking bids due as soon as possible.

School, Branchdale, Pa. Architect, G. C. Freeman, Liberty Bank Building, Reading, Pa. Owners, Star of the Sea Roman Catholic Church, Rev. C. O'Brien, Branchdale, Pa. Frame, steel, 2 stories, 80x54 feet, composition roof, pine floors, steam heat, electric light, iron stairs. Owners taking bids.

Church, Northampton, Pa. Architect, Sigmund J. Laschenski, 1220 Locust street, Philadelphia. Owners, St. Michael's Roman Catholic Church, 829 Main street, Northampton, Pa. Brick, hot water heat, electric light, slate roof, hardwood floors. Architect taking bids due August 28th, 1 o'clock (Standard Time).

Junior High School, Haverford Township, Pa. Architects, Boyd, Abel & Gugert, Otis Building, Philadelphia. Owners, Haverford Township, J. W. Huff, superintendent, Haverford, Pa. General construction, plumbing, heating, electric. Owners taking bids due September 8th. Certified checks as follows: \$5,000 for general, \$1,000 each for plumbing, heating, \$500 electric. Plans may be secured on and after noon of August 28th.

School, Lincoln, Pa. Architect, H. R. Heckman, Baer Building, Reading, Pa. Owners, Ephrata Township School Board, Lititz, Pa. Brick, 1 story and basement, 59x82 feet, slag roof, pine floors, roof ventilators (heating, plumbing and electric separate). Owners and architect taking bids due August 29th.

Residence and Garage, Drexel Park, Pa. Architect, R. R. Neely, 2301 Spruce street, Philadelphia. Owner, J. G. Davenport, care of architect. Stone, stucco, 2½ stories, 28x42 feet, 1 story, 18x22 feet, slate roof, hardwood and cement floors, brick fireplace, hot water heat, electric light. Architect taking bids due as soon as possible.

Bridge No. 90, over Ridley Creek, Pa.; **Bridge No. 185,** West Ninth Street Bridge, over Chester River, Pa. Engineer, S. C. Hollister, Media, Pa. Owners, Delaware County, G. T. Wadas, Media, Pa. Bridge No. 90, reinforced concrete arch, 6 span, 700 feet in length, to replace present steel bridge. Certified check 10 per cent. Deposit, \$10, no refund. Bridge No. 185, reinforced concrete arch, 160¼ span, to replace present steel through truss. Deposit, \$10, no refund. Certified check, 10 per cent. Owners taking bids due September 14th, 11 A. M. (Daylight Saving Time). Plans and specifications may be obtained from Controller Wades, Media, Pa.

Sewers, Darby, Pa. Architects, Damon & Foster, Post Office Building, Upper Darby, Pa. Owners, Borough of Darby, H. E. Smith, Darby, Pa. Construction of terra cotta pipes for sewers on Mill street, Fuller street, Cedar street, Tenth street, Eleventh street, Marks avenue. Certified check \$100.00. Owners taking bids, due September 2nd, 8 P. M., Daylight Saving time.

Paving, Upper Darby, Pa. Owners, Township of Upper Darby, H. E. Muty, Chairman of Sidewalk Commission, Upper Darby, Pa. Construction of cement concrete sidewalks, curbs and gutters for year 1925. Specifications on file Bureau of Public Works, Municipal Building, Upper Darby. Owners taking bids, due September 1st 8 P. M., Daylight Saving time.

Road Work, Pennsylvania. Owners, Pennsylvania Department of Highways, Harrisburg, Pa. Owners taking bids, due September 1st at 10 A. M., for construction of bituminous surface course on concrete base or reinforced concrete.

Armstrong County, R-69, A-3030-2617, Kiskiminstas and Park Townships, 1.95 miles.

Armstrong County, R-251, A-3027, East Franklin Township, 2.20 miles.

Beaver County, A-3316, Economy Township, .84 miles.

Crawford County, R-258, A-3356, Venango and Combridge Township, 2.62 miles.

Cumberland County, R-250, New Cumberland and Lemoyne Boroughs, Lower Allen Township, 2.21 miles.

Dauphin and Lebanon Counties, R-139, Derry Township, Palmyra Borough, 1.58 miles.

Lehigh County, A-2497, Catasauqua Borough, 1.42 miles.

Lycoming County, R-20-9, Hepburn Township, 7.15 miles.

Mercer County, A-2451, South Pymatuning Township, 2.61 miles.

Potter County, R-102, Ulysses and Sweden Townships, 12.65 miles.

Washington County, R-268, Centerville Borough, 5.46 miles.

Pennsylvania Contracts Awarded

Township Building and Garage, Abington, Pa. Architects, Tilden & Register, 1520 Locust street, Philadelphia. Owners, Commissioners of Abington Township, Pa. Contract awarded without alterations on glass: S. A. Sims, 2315 Walnut street, Philadelphia, \$50,845; Roy Randall, Jenkintown, Pa., \$50,847. Heating, Slight Brothers, Willow Grove, main \$2,279, garage \$1,515. Plumbing, H. Schaefer, Willow Grove, Pa., Main \$1,680, garage \$420. Electric, Margulis Elec. Co., 28 North Fifth street, Philadelphia, main \$641, garage \$160; Jackson Elec. Co., Glenside, Pa., main \$675, garage \$340.

Stores (4) and Arcade, Montgomery avenue, Narberth, Pa. Architects, Folsom, Stanton & Graham, 10 South Eighteenth street, Philadelphia. Owner, Harry Rittenhouse, Narberth, Pa. Brick, stucco, 1 story and basement, 100x60 feet, slag and tile roof, pine and cement floors, painting and glazing, plumbing, warm air heat, electric light, metal lath, galvanized iron skylights, wrought iron pipe. Contract awarded J. H. Dawson, Folcroft, Pa.

Residence (alts. and add.), Huntingdon Valley, Pa. Architects, Druckenmiller & Williams, Otis Building, Philadelphia. Owner, W. Charles O'Neill, on premises. Bond, brick work, cut stone, concrete and cement work, hollow tile, iron work, carpentry and mill work, plastering, painting and glazing, plumbing, electric work, limestone, floor hardener, iron work, slag roof, finished hardware. Contract awarded Fesmire Brothers, Huntingdon Valley, Pa.

Residences (3), Villa Nova, Pa. Architects, McIlvaine & Roberts, Otis Building, Philadelphia. Stone, cut stone, brick, 2½ stories, 78x30 feet, 76x29 feet, shingle, slag, variegated slate roof, oak and pine floors, plumbing, hot water heat, electric light, metal lath, tile work, bond. Contract awarded H. G. Champion, Otis Building, Philadelphia.

Residence, Garage and Garden Wall, Radnor Township, Pa. Architects, Willing, Sims & Talbutt, 126 South Eighteenth street, Philadelphia. Owner, Edgar B. Howard, on premises. Stone, 2½ stories, 144x44 feet, wing 31x19 feet, variegated slate roof, oak and pine floors, flagstone, cast stone, metal lath, tile and marble work, bond, ornamental iron work, waterproofing, limestone. Contract awarded William J. Ryder, 1725 Sansom street, Philadelphia.

Building (alts.), Markley and Marshall streets, Norristown, Pa. Architect, private plans. Owners, Jordan Auto Co., Norristown, Pa. Brick, 1 story and basement, 28x100 feet, Barrett Specification roof, cement and wood floors, plumbing, steam heat, electric light. Contract awarded Henry L. Borchers, Markley and James streets, Norristown, Pa.

Memorial Building, Glenside, Pa. Architects, Seeburger & Rabenold, 1524 Chestnut street, Philadelphia. Owners, War Memorial Association, Glenside, Pa. Brick, steel, 2 stories, 105x80 feet, steam heat, electric light, slate roof, oak floors. Contract awarded Albert Zellfelder, 1324 Walnut street, Philadelphia.

Masonic Temple, Pottsville, Pa. Architects,

Muhlenberg Brothers, 511 Penn street, Reading, Pa. Owners, Pulaski Realty Co., Pottsville, Pa. Contract awarded to Gordon Nagle, Pottsville, Pa.

Lodge Building (alts.), Center and Hardin streets, Shenandoah, Pa. Architect, J. B. Thompson, 34 South Seventeenth street, Philadelphia. Owners, L. O. O. M., No. 1179, Shenandoah, Pa. Brick, 3 stories and basement, 30x70 feet, built-up roof, composition and maple floors, stucco work, galvanized iron work, marquise copper bulks, hot water heat, electric light, plumbing, tile and marble work. Contract awarded Francis McGrau, 109 South Jardin street, Shenandoah, Pa.

Residence and Garage, Morch Tract, Elkins Park, Pa. Architects, Tilden & Register, 1520 Locust street, Philadelphia. Owner, J. C. Lowery, care of architects. Cinder block and stucco, 2½ stories, 30x40 feet, carpentry and mill work, electric light, cement work. Contract awarded Hesswin Co., 2047 Arch street, Philadelphia.

School (alts. and add.), Pottsville, Pa. Architect, G. C. Freeman, Liberty Bank Building, Reading, Pa. Owners, The St. John Baptist Church, Rev. T. W. Longinus, Pottsville, Pa. Slate partitions, tile work, enameled brick. Contract awarded to Gordon Nagle, Pottsville, Pa.

Restaurant (alts.), 233 East Montgomery avenue, Ardmore, Pa. Architect, private plans. Owner, Mary Ramsay, 212 St. James Place, Philadelphia. General alterations and additions. Contract awarded Hood & Gross, 1613 Chestnut street, Philadelphia.

Road Work, Pennsylvania. Owners, Pennsylvania Department of Highways, Harrisburg, Pa.

Schuylkill County, R-162, Sec. 1-A, Tamaqua Borough, 3,460 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. \$48,696.70. Contract awarded to Freeland Const. Co., Hazleton, Pa.

Adams County, R-123, Strabane and Cumberland Townships, 5,469 feet. One course reinforced concrete. \$40,460.26. Contract awarded to Paul R. Hostetter, York, Pa.

Bradford County, R-212, Burlington and North Towanda Townships, Burlington Borough. One course reinforced concrete. \$455,172.28. Contract awarded to David Schoen-tag, Inc., Saugerties, New York.

Schuylkill County, R-199, Tremont and Reilly Townships, 9,951 feet. One course reinforced concrete. \$93,334.80. Contract awarded to R. D. Richardson Const. Co., Scranton, Pa.

Chester County, Route 142, Easttown and Tredyffrin Townships. Contract awarded to Edward H. Ellis, 6017 Christian street, Philadelphia, \$99,937.94.

New Jersey Construction News

Washington Camp, Merchantville, N. J. Architects, Lackey & Hettel, 5 Hudson avenue, Camden, N. J. Owners, P. O. S. A., Merchantville, N. J. Concrete cinder block, timber, 2½ stories, 35x65 feet, steam heat, electric light, slate shingle roof, pine floors. Architects taking bids, due as soon as possible.

Apartment House, Atlantic City, N. J. Architect, J. Ethan Fieldstein, Otis Building, Philadelphia. Owner, name withheld. Brick, 3 stories, 21 apartments. Preliminary plans in progress.

Residence and Garage, Ventnor, N. J. Architect, V. B. Smith, Guarantee Trust Building, Atlantic City. Owner, Mrs. L. London, 1329 Atlantic avenue, Atlantic City. Stucco and cinder block, 2½ stories, 27x60 feet. Plans in progress.

Residence, Haddonfield, N. J. Architect, J. C. Jefferis, 312 Market street, Camden, N. J. Owner, R. W. Kraft, Collingswood, N. J. Brick, 2½ stories. Details undecided. Plans in progress.

Bank, Merchantville, N. J. Architect, J. C. Jefferis, 312 Market street, Camden, N. J. Owners, Merchantville Trust Co., Merchantville, N. J. Stone, 1 story and basement, 64x105 feet, electric light, tile and marble. Plans in progress.

Residence, Merchantville, N. J. Architect, A. B. Gill, 328 Market street, Camden, N. J. Owner, William Hicks, care of architect. Brick, 2½ stories, 32x48 feet, tile roof, hardwood floors, hot water heat, electric light, tile work. Plans in progress.

Junior High School, Blackwood, N. J. Architect, Thomas Stephen, Temple Building, Camden, N. J. Owners, care of Jacob Price, Glendora, N. J. Brick, steel, reinforced concrete, 2 stories and basement, 106x130 feet, slate and slag roof, hardwood floors, hollow tile, safety treads, roof ventilators, cast stone, ornamental iron, concrete stairs, skylights, metal lath (heating, plumbing and electric separate). Plans in progress.

Nurses' Home and Children's Quarters, Camden, N. J. Architects, Lackey & Hettel, 5 Hudson avenue, Camden, N. J. Owners, West Jersey Homeopathic Hospital, Dr. C. P. Hedley, Camden, N. J. Fireproof, 5 stories, each 45x115 feet and 56x105 feet, electric work. Plans in progress.

Hotel (alts. and add.), Atlantic City, N. J. Architects, Lackey & Hettel, 5 Hudson avenue, Camden, N. J. Owners, Hotel Trexler, care of architects. Brick, 4 stories, 32x55 feet, slag roof, pine floors, electric light, tile work. Plans in progress.

Residence (alts. and add.), Pine Grove, N. J. Architects, Lackey & Hettel, 5 Hudson avenue, Camden, N. J. Owner, Dr. C. J. Fleming, Pine Grove, N. J. Extensive alterations, stucco, partitions. Plans in progress.

Apartment, Trenton, N. J. Architects, W. W. Slack & Son, St. Regis Building, Trenton, N. J. Owner, Peter Schlicker, Jr., 1510 Riverside Drive, Trenton. Concrete, brick, steel, 3 stories, 55x185 feet, slag roof, hardwood floors, terra cotta, iron stairs, tile and marble, metal lath, vapor heat, electric light. Architects ready for bids due September 5th.

Residence, Garage and Stable, Morristown, N. J. Architects, C. Barton Keen & Wallace, 338 South Smedley street, Philadelphia. Owners, Warren Hires-Turner, care of architect. Stone, 3 stories. Plans in progress.

Hotel (add.), Boardwalk and St. Charles Place, Atlantic City. Architects, Warren & Wetmore, 16 East Fortieth street, New York City. Owners, St. Charles Hotel Co., Atlantic City, N. Y. Brick, steel, limestone, steel, 12 stories and basement and tower, 78x52 feet (plumbing, heating, elevators, electric separate), slag roof, tile work, cement floors, hollow tile, metal weather stripping, dampproofing, architectural terra cotta, ornamental iron work, kalamein and hollow metal doors, elevator doors, metal lath, tile and marble work, terrazzo work, sound-proofing, Cainara glass, mail chutes, gypsum partitions, caulking, painting and glazing. Architects taking bids due September 10th.

Grade School, Margate City, N. J. Architect, V. B. Smith, Atlantic City, N. J. Owners, Board of Education, Margate City, N. J. Brick, cut stone, steel reinforced concrete, 2 stories and ground floors, 124x121 feet (plumbing, heating, electric mechanical equipment), slag roof, mineral cement and pine floors, painting and glazing, metal lath, tile and marble work, hollow metal doors, bond, ornamental iron work, iron stairs, architectural terra cotta, roof ventilators, piling. Certified check 10 per cent. of bid. Bluestone, metal partitions, integral waterproofing, ornamental plastering. Certified check 10 per cent. of bid. Owners taking revised bids due September 3rd.

High School, Hammonton, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owners, Board of Education, Hammonton, N. J. Brick, steel, 2 stories and basement, 132x109 feet, wing 114x67 feet, wing 106x66 feet, certified check or bid bond, bond, full amount, excavation, grading, concrete work, composition stone work, imitation limestone, cast stone, brick work, structural steel, iron stairs, ladders and window guards, metal toilet partitions, dampproofing, integral waterproofing, steel lumber and metal lath, steel sash, galvanized iron ventilators, slag roof, plastering, metal lath, ornamental plaster, metal ceilings, carpentry and mill work, maple floors, tile and slate work, blackboards, cement floors and walks, painting and glazing, asbestos wood picture booth, acoustical treatment (plumbing, heating and electric separate bids). Owners taking bids due September 3rd.

Residence, Tisdale Place, Woodbridge, N. J. Architects, W. W. Slack & Son, St. Regis Building, Trenton, N. J. Owner, Fred A. Briegs, Tisdale Place, Woodbridge, N. J. Stucco and hollow tile, 2½ stories, 28x38 feet, slate roof, hardwood floors, hot water heat, electric light, tile work. Architects taking bids.

Residences (3), Oaklynne, N. J. Architect, private plans. Owners, Soffe Brothers, 517 Federal street, Camden, N. J. Frame, 6 rooms, hot water heat and hot air heat, electric light, asphalt shingle roof. Owners will build.

Residences (3), Runnemede, N. J. Architect, private plans. Owners, Soffe Brothers, 517 Federal street, Camden, N. J. Frame, 6 rooms, asphalt shingle roof, hot water and hot air heat, tile work. Owners will build.

Residences (2), 446-48 North Thirtyfourth street, Camden, N. J., \$10,500. Architect, private plans. Owner, Alfonso Verdi, 6145 West Girard avenue, Philadelphia. Frame, 2 stories, 14 feet 6 inches x 50 feet, slag roof, hot water heat, electric light. Owner will build.

Residence, Trenton, N. J., \$6,500. Architect, private plans. Owner, George Brammer, 761 Chambers street, Trenton, N. J. Frame, 1½ stories, 27x42 feet, tile roof, pine floors, hot water heat, electric light. Owner will build.

Bridge, over Westcunk Creek, Route No. 4, Ocean County, N. J. Owners, State Highway Commission, A. Lee Grover, secretary, Broad Street Bank Building, Trenton, N. J. Reinforced concrete, 2 spans, 20 feet 9 inches

each, roadway 40 feet. Owners taking bids due August 31st at 11 A. M. (Standard Time). Deposit of \$10. Certified check for 10 per cent. of bid required.

Road Work, New Jersey. Owners, State Highway Commission, A. Lee Grover, secretary, Trenton, N. J. Cumberland County, Route 20, Section 4, City of Millville. Excavation, single line reinforced concrete pavement, gravel shoulders. Owners taking bids due August 31st at 11 A. M. (Standard Time). Certified check, 10 per cent. required. Deposit of \$10.00 required.

New Jersey Contracts Awarded

Incinerator Building, Asyla, N. J. Architect, Arnold H. Moses, Temple Building, Camden, N. J. Owners, Camden County Tuberculosis Hospital, Board of Chosen Freeholders, Camden, N. J. Brick, reinforced concrete, 2 stories, 20x14 feet, built-up roof, cement floors, rolled steel sash. Contract awarded to Howard Fearn, 4402 Westfield avenue, Camden, N. J. Incinerator awarded to Ansonia Incinerator Co., 71 Eighth avenue, New York.

Residence, Somerville, N. J., \$14,000. Architects, W. W. Slack & Son, St. Regis Building, Trenton, N. J. Owner, Mrs. H. M. Ward, Somerville, N. J. General alterations, tile work. Contract awarded to Hall Brothers, Somerville, N. J.

Residences (3), 914-14½-16 Mt. Vernon street, Camden, N. J., \$10,000. Architect, private plans. Owner, Walter Dziatkiewicz, Camden, N. J. Brick and block, 2 stories, 13 feet 4 inches x 40 feet, slag roof, pine floors, hot air heat, electric light. Contract awarded to John Onderski, 1825 Tioga street, Philadelphia.

Residence, 3028 Westfield avenue, Camden, N. J., \$5,500. Architect, Arnold H. Moses, Temple Building, Camden, N. J. Owners, St. Wilfred's Protestant Episcopal Church, Camden, N. J. Block, 2½ stories, 18x60 feet, slate roof, hardwood and pine floors, electric lighting. Contract awarded to Theodore Hubbs, 321 Benson street, Camden, N. J.

Residences (alts.) to Apartment House, 1502-10 Mt. Ephraim avenue, Camden, N. J., \$4,000. Architect, private plans. Owner, John Okuliez, 1510 Mt. Ephraim avenue, Camden, N. J. General alterations, demolition, brick, add. 2 stories, 16x32 feet, slag roof. Contract awarded to Edward Praiss, 1566 Mt. Ephraim avenue, Camden, N. J.

Residences (4), Haddon Heights, N. J. Architect, private plans. Owner, Conrad Sacks, Camden, N. J. Frame, 6 rooms, hot water and hot air heat, tile work. Contract awarded to Soffe Brothers, 517 Federal street, Camden, N. J.

Residence, Lenola, N. J. Architect, private plans. Owner, William Sawson, care of builders. Frame, 6 rooms, hot water heat, electric light, tile work, asphalt shingle roof. Contract awarded to Soffe Brothers, 517 Federal street, Camden, N. J.

Residence, Kirkwood, N. J. Architect, private plans. Owner, J. Sullivan, care of builders. Frame, 6 rooms, hot air heat, electric light, asphalt shingle roof. Contract awarded to Soffe Brothers, 517 Federal street, Camden, N. J.

Store Building, Woodbury, N. J. Architects, care of Construction Department, F. W. Woolworth, Wilkes-Barre, Pa. Owners, F. W. Woolworth Co., Wilkes-Barre, Pa. Brick, one story, 42x90 feet, slag roof, maple floors, steam heat, electric light, tile work, metal ceilings, copper bulks. Contract awarded to Curtis Grinrod Co., 10 South Eighteenth street, Philadelphia.

Delaware Construction News

Road Work, Delaware. Owners, State Highway Department, Dover, Delaware. Low bidders on road work received August 19th, 1925:

Contract CS37, Harmon School-Oak Orchard, 2.00 miles. Old Line Const. Co., Chesterton, Md. Stone, \$53,940. Slag, \$51,570.

Contract CS41, Ocean View-Bethany Beach, 1.40 miles. William W. Truitt, Lincoln City, Del. Stone, \$39,038. Slag, \$38,943.

Contract CS42, Lowes Cross Roads-Mission, 2.89 miles. Field, Barker & Underwood, Commercial Trust Building, Philadelphia. Stone, aggregate, \$106,996. Slag, aggregate, \$103,090.

Contract CS43, Blades Connection, 0.32 mile. E. P. Downing, Seaford, Del. Stone, \$9,232. Slag, \$9,232.

Contract CS44, DuPont Road-Stockley, 1.10 miles. Old Line Const. Co., Chestertown, Md. Stone, \$30,762.10. Slag, \$29,809.25.

Delaware Contracts Awarded

Road Work, Delaware. Owners, State Highway Department, Dover, Del.

Contract No. 55, White Oak road, 1.00 mile. Contract awarded to Smyrna Cement Products Co., Smyrna, Del., \$8,940.

Contract No. CK11, Blackiston's Cross Roads-Clayton, 3.73 miles. Contract awarded to McNichol Paving & Const. Co., 1923 Cherry street, Philadelphia, \$117,521. Open joint, \$116,339.

Contract CK29, Thompsonville-DuPont Road, 3.4 miles. Contract awarded to McNichol Paving & Const. Co., 1923 Cherry street, Philadelphia. Metal joint, \$109,215.50. Open joint, \$108,139.70.

ATTACKS ON RAIL STEEL REINFORCING BARS ARE FUTILE

By C. J. O'Brien

Objections to and attacks upon rail steel reinforcing bars have generally proceeded from one or two reasons. First, there has been confusion of rail steel reinforcement bars with so-called "re-rolled" material, which was on the market many years ago. This re-rolled material was, as has been said before, the product of small mills and was made from scrap material of all kinds, fagoted, heated, and re-rolled into a very inferior product.

During the early days of the rail steel industry, also, it is quite likely that without specifications and tests, defective shipments reached the market. Engineers and others unused to high carbon steel have associated cases of defective material with the entire modern product.

In the second place there have been industrial conflicts between the rail steel mills and the bar companies which give engineering services and designs and act as intermediaries between the mills and the user. Whatever the reason, the quotations for rail steel reinforcing bars are generally a few dollars a ton less than so-called new billet material, so there has been an active campaign for several years

on the part of some bar companies to build up an opposition in the public mind to rail steel reinforcement bars.

This has taken the form of representations to committees of cities charged with formation of building codes with the purpose of introducing clauses ruling out the use of rail steel reinforcing. This conflict has also taken the form of distribution of laboratory test material representing tests of a few samples containing defective bars. There have been decided attempts to influence technical and standard testing committees to exclude rail steel, thus attempting to commercialize these committees.

The up-shot of all the conflict has been the creation of a feeling of uncertainty in the minds of some engineers who are not accustomed to search into records of laboratory tests and other scientific data. The real test of rail steel bars is the general experience resulting from their use.

In the first place, the specification of new billet steel alone or of rail steel alone on the basis of the specifications of the American Society for Testing Materials has no place in a building code. There is absolutely no question of public safety involved in the use of rail steel bars, simply because of the fact that there has been no case on record in which any concrete structure has failed because of the quality of the steel. Efforts, therefore, to introduce into building codes clauses ruling out rail steel bars are the result of a desire to destroy competition.

The playing up of cases of defective samples defeats its own purpose, because by the same method of attack we must rule out cement, burned clay products, new billet steel and stone. Specifications for all these materials, to be reasonable, are fixed in relation to the average satisfactory product.

The fundamental question of the relative availability of reinforcing concrete steels of low and high carbon content has never been adjudicated. There are certainly advantages in the use of high strength and high elastic limit steel, protecting concrete from large cracks due to overload or through overstrain produced by temperature changes or settling. There is a higher factor of safety against the increased unit stresses which are now advocated for reinforcing bars.

Ductility in reinforcing bars is a matter concerned with fabrication, that is to say, the bending of them. The test of the amount of ductility required is, first, will a bar pass a cold bend test of the American Society of Testing Materials, which is much more severe than the bend required in practice, and second, has there been sufficient ductility in the product to permit its widespread use from the mill to the finished building without interrupting the successful prosecution of the work by rejections.

These rail steel bars will, as a class, pass the cold bend test of the American Society for Testing Materials when tested in a proper manner. They should not be nicked or bent under the blow of a hammer.

In the second place, record of the increasing volume of use from mills to the finished job is reassuring. Certainly the product could not be manufactured in such large quantities and sold unless it was a usable and satisfactory material.

Something has been made by the opponents of rail steel of the fact that bending a bar may introduce cracks at the bend which will cut down the strength of the bent bar in the job. The tests by the Bureau of Standards of bent high carbon bars show that this is not a real danger. It cannot be a real danger or else we would have had indications of the fact in the hundreds of structures in which such material has been used.

Summing up this whole matter and trying to remove the engineering questions from the field of industrial conflict, it may be said:

1. That the preponderance of evidence from laboratory tests is in favor of the conclusion that reinforcing bars rolled from rails are suitable, satisfactory and safe material for concrete reinforcement.

2. That no cases of failure of concrete structures due to the use of rail steel reinforcing are on record. On the contrary scores of cases may be cited where important structures carrying heavy loads have been designed by engineers of technical skill in which rail steel reinforcing bars have served their purpose for years.

3. There is absolutely no reason for the requirement in a building code ruling out the use of rail steel reinforcing bars. There is no question of public safety involved.

4. The material furnished by the mills is uniform enough for a testing process and the application of the standard specifications of the American Society for Testing Materials will assure a satisfactory product.

MECHANICS' LIEN COMMITTEE NAMED BY HOOVER

The appointment by Secretary of Commerce Herbert Hoover of twelve qualified men as a committee to draft a standard State mechanics' lien act is announced in a statement issued by the Department of Commerce. At the request of several national organizations, the Department has undertaken to prepare an act suitable for adoption in the different States.

Mechanics' lien laws provide that contractors, sub-contractors, mechanics, laborers, architects, material men, and others who have contributed toward the construction of a building may obtain a lien on the property if they are not paid for their services within a reasonable time.

The owner of the property then has to pay promptly or allow his property to be sold by the court to settle the claims. One class of cases where lien laws play an important part arises when an irresponsible contractor defaults or goes into bankruptcy, leaving obligations due to workers, material men and subcontractors. Under the provisions of a lien law these creditors may obtain payment from the owner of the property on which the work was performed.

The State laws vary greatly and therefore cause confusion and expense to organizations doing business in several States, and to workers who move from one State to another. Dissatisfaction has been aroused in a number of States by laws whose provisions are said to be un-

fair to one or more of the different groups concerned, or to be difficult to construe.

In order to frame an act which will be as fair as possible to all the different groups it was felt that they should be represented in deciding on the general principles to be embodied in the act and that the best possible legal advice should be obtained in connection with phrasing it. The committee that Secretary Hoover has brought together accordingly includes representatives of the principal groups including some whose interests are those of the owner.

When a preliminary draft of the act is completed, it will be sent for criticism and suggestions to interested organizations and individuals, including a special new committee of the National Conference of Commissioners on Uniform State Laws of which Mr. Charles V. Imlay, a member of the Hoover committee, is chairman.

The committee has held two meetings, but in view of the large amount of work required to draft such a model law, involving an extensive study of existing statutes and court decisions in regard to them, no date has been announced for completion of the preliminary draft.

The committee's membership is as follows: F. Highlands Burns, Baltimore, Md., Pres., Maryland Casualty Company. William F. Chew, Baltimore, Md., Ex-Pres., National Association of Builders' Exchanges. John M. Gries, Washington, D. C., Chief, Division of Building and Housing, Department of Commerce. George F. Hedrick, Washington, D. C., Pres. Building Trades Council, American Federation of Labor. Charles O'C. Hennessy, New York City, N. Y., Chairman, Legislative Committee, N. Y. State Savings and Loan Assn. League. Charles V. Imlay, Washington, D. C., National Conference of Commissioners on Uniform State Laws. William B. King, Washington, D. C., Counsel National Association of Builders' Exchanges. Victor Mindeloff, Washington, D. C., American Institute of Architects. Chas. H. Paul, Dayton, Ohio, American Engineering Council. Frank Day Smith, Detroit, Mich., National Retail Lumber Dealers' Association. Leonard C. Wason, Boston, Mass., Associated General Contractors. John L. Weaver, Washington, D. C., Ex-Pres., Nat'l Association of Real Estate Boards. Dan H. Wheeler, Secretary.

Homes valued at \$13,000,000 have been purchased by 3,400 employees of the Bethlehem Steel Corporation under the Company's home owning plans, according to the current issue of the Bethlehem Review:

Commenting on building and home

ownership activities, President E. G. Grace says:

"Building and construction activities in this country absorb nearly one ton in every five of the production of iron and steel, being exceeded in steel consumption only by the railroad industry. Building operations interest us not only because they thus provide an important part of the steel market and affect the steadiness of our operations, but also because of their connection with the desire each of us has to own a home.

"Since the World War building operations throughout the country have increased from three and one-half billions of dollars in 1919 to over five billions in 1924. Delayed building has been credited for much of this activity, but it is possible that new factors have now entered the building industry which are just as important as delayed building held over from the war.

"Increased buying power during the past ten years, has made it possible for people in this country to realize to an increasing extent the desire to own their homes. Home building has accounted for nearly one-half of building operations during the past year. It is not only a question of housing, but of more and better housing. A demand has grown for additional space, for modern conveniences, for room for gardens and space for children to play in safety. New houses have been and will be required to meet this demand.

"In the home building program, the automobile has played a large part, having made possible the acquisition of better homes in locations away from congested centres. The building program has been accomplished by need for new roads, more miles of street car tracks, more motor buses, more railroad cars loaded with manufactured goods.

"All of these activities have given a background to general prosperity and have had a stabilizing effect on industry. The conditions are of such a fundamental nature that building activity with its accompanying demand for steel products and other manufactured goods of all kinds should continue for some years to come."

Bethlehem's employee housing activities have developed into a general plan which is in operation, with certain modifications, at the company's major plants. It is administered by a real estate organization at each of these plants and includes among its activities the improvement of existing houses owned by the company, the construction of new houses at plants where housing was inadequate or where other conditions made such housing necessary, and aid to employees in the purchase or erection of homes.

Several of the distinctive and unusual

phases of Bethlehem home building plans are:

(a) Free architectural, engineering, financial and legal assistance and advice.

(b) Employee receives full title to property at once. He is under no obligation to the company and can work where he pleases and dispose of his property as he wills, as long as his monthly payments are maintained.

(c) A life insurance policy at low rates (about one-third of the usual premium) without any medical examination, is taken out on each home builder or purchaser, during the term of his indebtedness, fully protecting his dependents as far as their home is concerned, in the event of his death.

(d) Proper provision is made for paying off the mortgage indebtedness through monthly payments which are a little higher than local rents.

While the company has given encouragement in every way to home ownership on the part of employees, its work has been directed towards helping the employee to provide for himself and not in tying up any considerable amount of its own money in assisting employees to own their own homes.

Local financial institutions co-operate with the company to furnish money on first mortgages. The company then need only advance the difference between such mortgage and the initial cash payment of the employee. Usual rates of interest are charged and the employee of course, pays the same title examination fees, recording fees and carrying charges, such as insurance, taxes, etc., as he would have to pay if he built and financed his own home.

Bethlehem's management believes that home ownership makes for better, happier and more settled citizens and employees, and as a result both the home and the company are benefitted.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

Acids Do Not Harm these Concrete Floors—

L. A. Dreyfus Building Rosebank, Staten Island, N. Y. Turner Cons't. Co. Engrs. & Contrs.

They're Protected with "ANTI-HYDRO"

The concrete floors in this building are constantly covered with acids and water which would quickly deteriorate them if they were not hardened and waterproofed with "ANTI-HYDRO." Although these floors have been in constant use for many years, "ANTI-HYDRO" has fully protected them from wear, water and the action of the acids. "ANTI-HYDRO" is a liquid integral agent that mixes easily with the gauging water—no skilled labor is required. It hardens and waterproofs concrete and makes it acid, alkali and oil-resisting all in one operation. For 21 years "ANTI-HYDRO" has been the accepted standard. Results are *guaranteed permanent*. Use "ANTI-HYDRO."

For Bricklaying-Plastering and Concrete

Combinations that can't be beat!

IN the preparation of each of the Knickerbocker Lime Products, the uppermost thought has been to secure a product that will give maximum results with minimum labor cost.

Klimco, Knickerbocker Neat, and Knickerbocker Hydrated Lime are the three most popular brands and each is offered as the very best article on the market for the particular use intended.

Knickerbocker Lime products have proven of tremendous value to the builders and contractors throughout the East. You will make no mistake if you use one or all of them on your next job. Three booklets, containing the salient facts about these wonderful combinations, are yours for the asking.

3

Safe Combinations

KLIMCO

A specially prepared, ready-to-use lime and cement mortar for brickwork and masonry. Klimco produces a plastic, easy-spreading, quick hardening, economical mortar.

KNICKERBOCKER NEAT

An economical plastering preparation containing the proper amount of first grade hair. It has great sand carrying capacity and produces a mortar that will harden in less time than when old-fashioned lime is used.

HYDRATED LIME

Knickerbocker Hydrated Lime is high in lime oxides and low in impurities. It is the best for use in cement, concrete and mortars. For agricultural purposes it is unsurpassed.

KNICKERBOCKER LIME

A perfect product for every purpose

reserved). Owner will build and is sub-letting.

& Harris, 603 Chestnut street, Philadelphia. Owners, Rosemont College, Rosemont, Pa. Stone, cast stone, brick, steel, granite, 1 story, mezzanine and basement, 60x28 feet, wing 23x29 feet, slag and variegated slate roof, cement and oak floors, hollow steel sash, bond, floor hardener, ornamental iron work, waterproofing, membrane. Contract awarded William R. Dougherty, 1610 Sansom street, Philadelphia.

Residence (alts. and add.), Paoli road, Radnor, Pa. Architect, Edmund B. Gilchrist, 1618 Latimer street, Philadelphia. Owner, Franklin Baker, Jr., on premises. Hot water heat, electric light, metal lath, shingle roof, oak floors, plastering, carpentry and mill work, painting and glazing, plumbing. Contract awarded J. S. Cornell & Son, 1528 Cherry street, Philadelphia.

High School, Duryea, Pa. Architect, T. J. Miller, Brooks Building, Scranton, Pa. Owners, Duryea School District, P. Taule, secretary, Duryea, Pa. Brick, steel, semi-fireproof, 2 stories and basement, 125x150 feet, slag roof (heating, plumbing and electric separate bids). Contract awarded to Alaimo Brothers, Pittston, Pa. Heating and ventilating awarded to H. N. Gardner, Scranton, Pa. Plumbing awarded to Druffner & Son, Avoca, Pa. Electrical awarded to Hartman Electrical Co., Scranton, Pa.

Residence, Wynnewood, Pa. Architects, W. W. Slack & Son, St. Regis Building, Trenton, N. J. Owner, Dr. B. P. Widmann, Wynnewood, Pa. Stone, 2½ stories, 28x38 feet, slate roof, hardwood floors, hot water heat, electric light, tile work. Contract awarded to John Maher, Trenton, N. J.

Garage (add.), Residence (add.), Wynnewood, Pa. Architects, McIlvaine & Roberts, Otis Building, Philadelphia. Owner, H. G. Pearce, on premises. Stone, brick, plaster, 1½ stories, 16x14 feet, 1 story (residence), 28x19 feet, slag and shingle roof, cement, oak floors, plumbing, hot water heat, electric light, metal lath, tile work, bond, flagstone. Contract awarded to S. A. Sins, 2315 Walnut street, Philadelphia.

Apartment House, 26 West Seventh street, Chester, Pa. Architect, Jesse T. Hoekstra, 1713 Sansom street, Philadelphia. Owner, Alan P. Musselman, 712 Fulton street, Chester, Pa. Brick, cut stone, concrete, steel, 3 stories and basement, 119x45 feet, slag roof, oak and composition floors, hollow tile, metal ceilings, metal lath, tile work, metal cover sash, hollow metal skylights, kalamein and hollow metal doors, ornamental iron work, flagstone or bluestone. The following items are reserved: Refrigerations, heating, electric, oil burning equipment, folding beds, kitchen cabinets, gas ranges, wall safes, medicine cabinets, finished hardware, elevator work, composition floors in kitchen. Contract awarded Farrell-Roth Const. Co., 123 South Twenty-first street, Philadelphia, who are taking sub-bids.

Central Office Building (alts.), Northeast Corner Tame and Ward streets, Ridley Park, Pa. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Bell Telephone Co., Seventeenth and Parkway, Philadelphia. Stone, brick, steel, 1 story, 35x30 feet, slag roof, cement and composition floors, plumbing, hot water heat, electric light, metal lath, ornamental iron work, wrought iron pipe. Contract awarded F. W. Van Loon, Perry Building, Philadelphia.

Shop Buildings (2), Elizabethtown, Pa. Architect, Edgar A. Wightman, Bankers' Trust Building, Philadelphia. Owners, Thomas Rankin Patton Memorial, Elizabethtown, Pa. Brick, cut stone, steel, 2 stories and basement, 211x43 feet 2 inches wing, built-up asbestos roof, cement and pine floors, plumbing, steam heat, electric light, rolled steel sash, bond, ornamental iron work, limestone, metal lath, rolled steel sash, bond, metal partitions. Con-

tract awarded Curtis Grindrod Co., 10 South Eighteenth street, Philadelphia.

Road Work, Pennsylvania. Owners, Pennsylvania Department of Highways, Harrisburg, Pa.

Bradford and Sullivan Counties, R-17, Dushore Borough, Albany and Cherry Townships, \$259,780.05. Contract awarded to United Const. Co., Lock Haven, Pa.

Erie County, A-3414, Mill Creek Township, \$18,875.25. Contract awarded to Mayer Brothers, Erie, Pa.

Lehigh County, R-163, Slatington Borough, Washington Township. Contract awarded to McInerney & McNeal, Inc., Easton, Pa., \$78,406.50.

Berks County, A-3463, Heidelberg Township, \$18,415.41. Contract awarded to W. R. Wolfinger, Norristown, Pa.

Union and Snyder Counties, R-25, Spar, Monroe and Union Townships. Contract awarded to Lincoln Const. Co., Strafford, Pa., \$103,114.11.

Sewer Construction, Haverford Township, Pa., \$7,700. Engineer, Stuart B. Over, Township Building, Oakmont, Pa. Owners, Commission of Haverford, T. Weideman, Chairman, Township Building, Oakmont. Construction of 8-inch terra cotta sewer, approximately 4,500 lineal feet. Contract awarded Knox-Mariana Const. Co., Ardmore, Pa.

Retaining Wall, Bridge No. 122, Sproul Highway, North of Baltimore Pike, Springfield Township, Delaware County, Pa. Owners, Delaware County Commissioners, care of County Controller, Media, Pa. 120 feet of retaining wall 5¼-foot sidewalk and 6-inch curb. Contract awarded McHale Co., Norwood, Pa., \$7,750.

New Jersey Construction News

Buildings, New Jersey State Home for Girls, Trenton, N. J. Architect, Alan B. Mills, Director of Architecture and Construction, Trenton, N. J. Owners, State of New Jersey, B. G. Lewis, Commission of Institutions and Agencies, Trenton, N. J. Reinforced concrete, brick, steel (plumbing, heating and electric separate), tin and block slate roof, cement floors, hollow tile, painting and glazing, metal window guards, shoring, ornamental iron work, floor hardener, iron stairs, kalamein doors, rolled steel sash, tile and marble work, metal lath, integral waterproofing, membrane waterproofing, limestone, granite and bronze work. Certified check 5 per cent. of bid. Infirmary addition, 2 stories and basement, 66x26 feet, reception building, 3 stories, 75x32 feet, 2 wings, 38x31 feet. Owners taking bids due September 14th.

Residences (2), Liberty street, Trenton, N. J. Architect, R. A. Schumann, 202 West State street, Trenton, N. J. Owner, M. J. Folmer, Trenton, N. J. Brick, 2½ stories, 28x44 feet, slate roof, hardwood floors, hot water heat, electric light. Owner ready for bids.

Armory, Westfield, N. J. Architect, Alan B. Mills, Department of Architecture and Construction, Trenton, N. J. Owners, Commission of Institutions and Agencies, Burdell G. Lewis, Trenton, N. J. Brick, reinforced concrete, steel, 1 story, 243x149 feet (plumbing, heating and electric separate), green slate and slag roof, maple floors, tile, marble work, rolled steel sash, tin clad doors, kalamein doors, bond, iron stairs, ornamental iron work, safety treads, alberene stone, precast concrete, steel toilet partitions. Certified check 5 per cent. of bid. Owners taking bids due September 8th.

Power Plant, Chalfonte-Haddon Hall, Atlantic City, N. J. Engineers, Stewart A. Jellett Co., 1200 Locust street, Philadelphia. Owners, Chalfonte-Haddon Hall, Leeds &

Lippincott Co., Atlantic City. Reinforced concrete, brick, steel, 6 stories, 98x74 feet, slag and Barrett specification roof, composition, cement floors, hollow tile, plumbing, damp-proofing, rolled steel sash, kalamein doors, bond, floor hardener, ornamental iron work, brass pipe, rolled steel doors, membrane waterproofing, electric ducts and manholes. Engineers taking bids due September 7th at 10 A. M.

Schools (2), Pensauken, N. J. Architect, I. T. Catherine, Franklin Trust Building, Philadelphia. Owners, School Board of Delair Township, Delair, N. J. Low bidders: George W. Shaner & Son, Palmyra, N. J., \$268,000. School No. 2, H. John Homan, Eighteenth and Cherry streets, Philadelphia, \$307,000. All bids rejected.

Residence (alts. and add.), Riverton, N. J. Architect, J. Fletcher Street, 1120 Locust street, Philadelphia. Owner, Mrs. T. S. Janney Stoddart, 301 Highway, Riverton, N. J. Stone, 3 stories, 15x20 feet (vapor heat, plumbing, painting reserved), electric light, tile work, shingle roof, hardwood and composition floors, hardware. Architect taking bids due September 4th at noon.

Bank, Salem, N. J. Architect, Thomas Edw. Ash, 1012 Walnut Street, Philadelphia. Owner, Salem National Bank and Trust Company, care of Architect. Brick, limestone, 1 and 2 stories, 48x100 feet, slag roof, marble and linoleum floors, marble work, vaults, electric light, vapor heat. Plans in progress. Will take bids in one month.

Hotel (alts. and add.), South Virginia Avenue, Atlantic City. Architect, Bertram Ireland, Guarantee Trust Bldg., Atlantic City. Owners, Hotel Kauffman, 161 South Virginia Avenue, Atlantic City. Brick, steel, 7 stories, 33x70 feet, hardwood floors, steam heat, electric light, elevators, metal lath, tile and marble work. Owner will take bids.

Residence and Garage, Dorset and Atlantic Aves., Ventnor, N. J. Architect, A. L. Brooks, Humphry Bldg., Atlantic City, N. J. Owner, Charles Abrams, care of architect. Hollow tile and stucco, 2½ stories, 25x68 feet, 20x22 feet, Spanish tile roof, hardwood floors, hot water heat, electric light, tile and marble. Architect taking bids due Sept. 8th.

Residences (6) Brigantine Beach, N. J. Architect, D. A. Rosenstein, Humphry Building, Atlantic City, N. J. Owners, Brigantine Beach Development Co., Guarantee Trust Bldg., Atlantic City, N. J. Brick, frame, stucco, 2½ stories, approximately 36x40 feet, various roofs, hardwood floors, hot water heat, electric light, tile work. Owners will build.

Residence, Pleasantville, N. J. Architect, A. L. Brooks, Humphry Bldg., Atlantic City, N. J. Owner, Geo. Brooks, Pleasantville, N. J. Cinder block, stucco, 2½ stories, 75x45 feet, tile roof, hardwood floors, hot water heat, electric light. Benj. R. Fox, 1102 Atlantic Ave., Atlantic City, taking sub-bids.

School (add.), Troy Avenue, Ventnor, N. J. Architects, Stout & Riebnack, Guarantee Trust Bldg., Atlantic City, N. J. Owners, Ventnor School Board, Miss Maulick, Secy., Ventnor, N. J. Brick, steel, 2 stories and basement, 14 rooms and auditorium, slag roof, hardwood floors, safety treads, hollow tile, roof ventilators, water and damp-proofing, ornamental iron stairs, Bond, kalamein doors, tile and marble work, metal lath, (heating, plumbing and electric separate). Plans in progress.

Store and Apartment, Atlantic City, N. J. Architect, A. L. Brooks, Humphry Bldg., Atlantic City, N. J. Owner, name withheld. Brick, steel, 3 stories, 30x100 feet, slag roof, hardwood floors, copper work, plate glass, tile work, hot water heat, electric light. Plans in progress.

Residence, West Atlantic City, N. J. Architect, A. L. Brooks, Humphry Bldg., At-

lantic City, N. J. Owner, Mr. Schneider, on premises. Brick, frame, stucco, 2 stories, 40x60 feet, Spanish tile roof, hardwood floors, hot water heat, electric light, tile and marble work. Plans in progress.

Store and Apartment, Illinois and Atlantic Avenues, Atlantic City, N. J. Architect, H. A. Stout, Guarantee Trust Bldg., Atlantic City. Owners, Halpren Bros., 1740 Atlantic Ave., Atlantic City, N. J. Steel, brick, reinforced concrete, 5 stories, 100x30 feet, slag roof, hardwood floors, hollow tile, elevators, water and damp-proofing, ornamental iron concrete stairs, copper work, plate glass, tile and marble, City heat, electric light. Architect will be ready for bids in a few days.

Hospital, Atlantic City, N. J. Architects, H. A. Stout, H. V. Mathis, J. H. Vaughn, Guarantee Trust Bldg., Atlantic City, N. J. Owners, Atlantic City Hospital, Mr. J. Moore, Atlantic City. Fireproof, 4 stories, 40x165 feet, slag roof, steam heat, electric light. Will be ready for revised bids in a few days.

New Jersey Contracts Awarded

Residences (5) 1538-46 Louis Street, Camden, N. J., \$20,000. Architect, private plans. Owner, James Zawisza, 1188 Everett Street, Camden, N. J. Brick, 2 stories, 14x42 feet, slag roof, pine floors, hot air heat, electric light. Contract awarded to Barney Podusczak, 1220 Chase Street, Camden, N. J.

Store and Storage, 1223 Haddon Ave., Camden, N. J., \$10,000. Architect, private plans. Owner, H. S. Pout, Camden, N. J. Brick, 2 stories, 18x65 feet, slag roof, hardwood and pine floors, hot water heat, electric light. Contract awarded S. Levy, 1214 Kaighn Ave., Camden, N. J.

Building (add.), 503 Market Street, Camden, N. J. \$4500. Architect, private plans. Owner, V. W. Fulton Co., northeast corner 5th and Market Sts., Camden, N. J. Brick, 2nd story addition, 38x58 feet, slag roof, electric work. Contract awarded to Jas. D. Hill, 119 Crestmont Terrace, Collingswood, N. J.

Apartment (alts. and add.) Atlantic City, N. J. Architect, W. S. Hewitt, Guarantee Trust Bldg., Atlantic City. Owner, James Brigadell, 3201 Atlantic Ave., Atlantic City. Brick, steel, 4 stories, 15x12 feet, slag roof, pine floors, heating extension, electric light, metal lath. Contract awarded to H. Scull, 8 N. Cambridge Ave., Atlantic City, N. J.

Hotel and 7 Stores, Wildwood avenue and Boardwalk, Wildwood, N. J. Architects, Edwards & Green, Camden, N. J. Owners, Wildwood Hotel Co., H. Foster Goslin, president, Wildwood, N. J. Brick, steel, concrete, hollow tile, terra cotta, 9 stories and basement, 200x230 feet, promenade tile, asphalt built-up roof, vapor vacuum heat, electric light, tile, marble and terrazzo work, hollow metal skylights, kalamein doors, iron stairs and work, reinforced concrete floors, macite partitions, metal toilet partitions, laundry and kitchen equipment. Will contain 300 rooms, 300 baths, ball room, grill. Contract awarded to Lynch Const. Co., 1 Pershing Square, New York.

Bank, Glassboro, N. J. Architect, Norman Hulme, 1524 Chestnut street, Philadelphia. Owners, Glassboro Trust Co., E. Mortimer Duffield, Glassboro, N. J. Brick, cut stone, steel, 1 story and basement, 48x36 feet, slag roof, cement floors, plumbing, electric light, metal lath, tile, marble and terrazzo work, hollow metal sash, ornamental iron work, cabinet work. Contract awarded F. L. Supplee, University Boulevard, Glassboro, N. J.

New Auditorium, Haddon Heights, N. J. Architect, Henry C. Pelton, 151 West Forty-second street, New York City. Owners, St.

Rose's Parochial School, Haddon Heights, N. J. Stone, steel, 1 story and basement, balcony, 92x56 feet (cut stone, architectural terra cotta, waterproofing, dampproofing reserved), steam heat, electric light, metal lath, asbestos built-up roof, maple floors, metal ceilings. Contract awarded Hurley-Bryan Co., 117 South Twentieth Street, Philadelphia.

Export Warehouse, Paulsboro, N. J. Architect, private plans. Owners, Vacuum Oil Co., Paulsboro, N. J. Reinforced concrete, 3 stories, 60x120 feet, slag roof, cement floors, electric light. Contract awarded White Const. Co., Jefferson Building, Philadelphia, who will take sub-bids.

Bank, Elmer, N. J. Architect, Thomas Edward Ash, 1012 Walnut street, Philadelphia. Owners, Elmer Trust Co., C. L. Straten, secretary, Elmer, N. J. Brick, cut stone, steel, limestone, granite, 2 stories and basement, 35x45 feet, slag roof, cement and pine floors, painting and glazing, plumbing, steam heat, electric light, metal lath, bond, cement block, cabinet work, septic tanks, wrought iron pipe. Contract awarded Herbert J. Dodge, Elmer, N. J.

School, Pennsgrove, N. J. Architect, Charles R. Peddle, 136 South Fourth street, Philadelphia. Owners, Board of Education, Pennsgrove, N. J. Frame, 1 story, 50x80 feet, shingle roof, pine floors, heating, electric. Contract awarded Harry C. Cawley, Pennsgrove, N. J., \$12,293.87.

Garage, Newton Avenue Car Barns, 300 Newton avenue, Camden, N. J., \$20,000. Architects, private plans. Owners, Public Service Railway Co., 418 Federal street, Camden, N. J. Brick and block, 1 story, 52x350 feet, corrugated iron roof, hot air heat, electric light, cement floors. Contract awarded to Bennett-McLaughlin Co., 3260 Ludlow street, Philadelphia.

Residences (3), 973-75-77 North Twenty-third street, Camden, N. J., \$12,000. Architect, private plans. Owner, Dr. David F. Bentley, 735 State street, Camden, N. J. Brick and block, 2 stories, 16 feet 2 inches x 40 feet, slag roof, hot water heat, electric light. Contract awarded to Harvey W. Cass, 128 Weikel avenue, Merchantville, N. J.

Manse (alts. and add.), Haddonfield, N. J. Architects, Harris & Richards, Drexel Building, Philadelphia. Owners, First Presbyterian Church, Haddonfield, N. J. Hollow terra cotta, stucco, 1 story, 16x13 feet, wing 14x12 feet, slate roof, concrete work, stone work, cut stone, brick, slate roof (match present), carpentry and mill work, pine, oak floors, painting, glazing, hardware, tile work, plumbing, brass pipe, wrought iron pipe, electric work, heating alterations. Contract awarded Thomas C. Trafford, 1613 Sansom street, Philadelphia.

Miscellaneous Construction News

Dormitory, Newark, Del. Architect, Day and lauder, Franklin Bank Building, Philadelphia. Owner, Delaware University, on premises. Stone, brick, steel, ready for bids in two weeks.

Stores (6), Wilmington, Del. Architect, R. C. Tindall, 914 Orange street, Wilmington, Del. Owner, name withheld. Brick, 1 story, 70x70 feet, slag roof, pine floors, roof ventilators, plate glass, skylights, tile work, steam heat, electric light. Plans in progress.

Boiler House and Laundry, Wilmington, Del. Engineer, R. P. Schoenijahn, Industrial Trust Building, Wilmington, Del. Owners, Homeopathic Hospital, Wilmington, Del. Preliminary plans in progress.

New Plant, Baltimore, Md. Architect, C. B. Comstock, 110 West Fortieth street, New York City. Owners, General Baking Co., Bal-

timore, Md. Reinforced concrete, brick, steel, 3 stories, basement, pent houses, 239x100 feet, wing 135x116 feet, wing 268x60 feet, slag roof, maple, cement and wood block floors (heating, lighting reserved), roof ventilators, architectural terra cotta, ornamental iron work, brass pipe, floor hardener, bond, fire and hollow metal doors, copper skylights, rolled steel sash, tile and marble and terrazzo work, metal lath, cork insulation, membrane waterproofing, monitor sash, asphalt floors, National steel pipe. Architect taking bids due as soon as possible.

Junior High School, Delaware avenue, Albany, N. Y. Architects, M. T. Reynolds and K. G. Reynolds, 100 State street, Albany, N. Y. Owners, Board of Contract & Supply, City of Albany, N. Y. Brick, reinforced concrete, steel, stone, granite, 3 stories and 2 basements, 204x93 feet, 2 wings, 135x72 feet, steam heat, electric light, metal lath, tile and marble work, slag roof, cement and maple floors, hollow tile, plumbing, tile and marble work, rolled steel skylights, bond, ornamental iron work, iron stairs, waterproofing and dampproofing, ornamental terra cotta, artificial stone, limestone, bronze covered doors, imitation travertine, imitation caen stone. Owners taking bids due September 8th.

Miscellaneous Contracts Awarded

State House (add.), Dover, Del., \$150,000. Architects, Brown & Whiteside, DuPont Building, Wilmington, Del. Owners, State of Delaware, Hon. R. P. Robinson, Dover, Del. Brick, steel, 3 stories and basement, 49x100 feet (plumbing, heating, electric work separate), slag roof, cement and pine floors. Contract awarded to Selbyville Mfg. Co., Selbyville, Del. Electric to Electric Cont. Co., 111 West Eighth street, Wilmington, Del. Plumbing to T. T. Weldin & Son, 916 Orange street, Wilmington, Del.

Office Building (alts.), Market street, Wilmington, Del. Architect, C. R. Hope, DuPont Building, Wilmington, Del. Owners, Highfield Realty Co., Wilmington, Del. General alterations, (2) new fronts, terra cotta trim, structural steel, partitions, ornamental iron work. Contract awarded to S. R. Jackson, 831 Orange street, Wilmington, Del.

Hospital Building, Farnhurst, Del. Engineer, R. P. Schoenijahn, Industrial Trust Building, Wilmington. Owners, Delaware State Hospital, Farnhurst, Del. Brick, steel, 1 story and basement, slag roof, cement and oak floors (plumbing, heating and electric work reserved). Contract awarded to W. D. Haddock & Co., 804 Orange street, Wilmington.

Dormitory, Wellsley, Mass. Architects, Day & Klauder, Franklin Bank Building, Philadelphia. Owners, Wellsley College, Wellsley, Mass. Brick, stone, limestone, 3 and 4 stories, 250x40 feet, 5 wings, steam heat, electric light, slate roof. Contract awarded Matthews Const. Co., Princeton, N. J.

BRICK

A Paper by D. Knickerbacker Boyd, Architect and Structural Standardist, Presented at the Annual Meeting, American Society for Testing Materials

Summary: The purpose of this paper is to show that any requirements for an individual brick should be based upon the performance expected of the collective units when assembled under actual service conditions in the form of a wall or

pier, rather than upon the performance of the unit itself.

This inevitably brings us to a consideration of existing stipulated requirements or specifications for bricks and to the available records of tests on brick walls, piers and other structural features.

Requirements as to individual brick are set forth in nearly every municipal or state building code, but they usually call for a hard, sound, well-burnt brick. The National Board of Fire Underwriters and the Department of Commerce Building Code Committee have formulated requirements as suggested national standards for brick. The Department of Commerce Building Code Committee in two documents refers to the Specification for Building Brick of this Society, with modifications in each case which show the need for a thorough revision of Standard Specifications Serial Designation C-21-20—on which Committee C-3 itself has long been working.

Tests on brick piers, for strength, have been made at the Watertown Arsenal and in several educational institutions. Tests on brick walls for fire resistance, and other tests for strength, have been made by the U. S. Bureau of Standards and perhaps a few others—but all too few—have been made elsewhere. Some tests have been made for heat transmission through brick walls, but none have ever been made on walls for absorption and for some other very important determinations.

In the paper which follows I will attempt to point out some of the knowledge concerning brickwork, as well as brick, which we should have through greater familiarity with actual structural requirements, in order to formulate improvements upon any specifications for brick. Such specifications should be workable and elastic enough to provide for the selection of the different grades of brick common to each locality and suitable to appropriate conditions of use. With particular reference to the existing specifications of this society, these would involve consideration of temporary revisions, as quickly as possible, through some of the following ways:

(1) To minimize the requirements for compressive strength.

(2) To emphasize the requirements for transverse strength.

(3) To greatly modify the requirements for absorption or to revise by fixing a strength value for the brick when saturated.

(4) To classify the brick according to the two highest tests rather than the one lowest, with perhaps limits on that property which is to be least considered rather than waiving same, as is now provided for by at least one national authority.

(5) To recommend methods of adjusting the specifications to suit the com-

position of local clays and structural requirements.

(6) To define the standard size as an approximation to be averaged.

In considering permanent changes in, or a complete revision of, the present specifications, I will endeavor to show that the following information should be obtained and fully considered:

First—On how absorption affects brick in the wall, and on how much water a wall of given thickness should absorb in a given time.

Second—On the strength and weight of walls wet and dry.

Third—On the effectiveness of field tests for transverse strength as determining the general characteristics of a brick. A device for this purpose has been designed by the U. S. Bureau of Standards.

Fourth—On the advisability of testing for surface hardness in addition to compression.

Fifth—On the difference between bricks tested on edge and flatwise.

Sixth—On the effectiveness of the Sodium Sulphate Test as an indication of weathering qualities.

Seventh—On the effect of alternate freezing and thawing of brick.

Eighth—On the reclassification of brick according to probable use rather than by arbitrary limits.

Ninth—On the physical qualities of brick in actual masonry construction with different mortars and different bonds.

Difficulties Involved in Making Uniform Specifications

Due to the infinite variety of chemical combinations in clay itself, and due to climatic and geologic conditions to which all clays, wherever found, have been subjected through the ages, it is impossible to obtain a raw material uniform in all localities for the manufacture of brick. Because of this intrinsic difference in the raw material it is practically impossible to manufacture brick from different clays which will have the same physical properties. It would, therefore, seem impossible to arrive at one set of specifications which accurately and fairly cover the many variations in physical properties of the different kinds of brick produced throughout the country.

Some brick, for instance, which have throughout an entire region, been in satisfactory use for years as hard brick, have physical qualities which would, on the basis of the present A. S. T. M. Specification, classify them as soft according to absorption, medium according to compression and hard according to modulus of rupture. It would assuredly be an economic waste to classify these brick as soft when they have proven thoroughly serviceable in a climate subject to heavy rain and severe cold and to suggest the exclusion of such brick by architects, builders, manufacturers and the public.

Yet this is an actual situation which is presented when authorities in one part of the country specify brick according to the A. S. T. M. Standards, for buildings in another part of the country.

Until such requirements are changed, I should like to see an explanation of the classification printed somewhat like the following:

"This classification is arranged from results of tests made on various bricks and is intended to be a hypothetical classification. Due to the variations in results obtained from tests on bricks manufactured from clays of different chemical composition, the requirements may be altered provided the resultant combination of physical properties has proven satisfactory in actual use in the locality intended and that the change is stipulated in specifications as a regional modification of the A. S. T. M. Standard."

(Note. The same explanation would be applicable to specifications for sand, gravel, broken stone and other products subject to local use.)

Practically, logically and scientifically there should be a separate set of specifications for bricks made from various kinds of clay and for their several uses. It is different with a strictly manufactured product for which it is necessary to standardize the various ingredients as to quality and particularly as to quantity and where it is impossible to characterize the product by visual inspection and physical demonstration "on the job." This is not the case with a brick, which by its color and ring, may, with a knowledge of local conditions, be generally determined as to whether it is a strong, permanent and thoroughly satisfactory unit for its intended use.

It is my hope that some day, in place of hard and fast dividing lines between compression, modulus of rupture, tensile strength and absorption, a chart and description of characteristics may be devised whereby the specifier may select the properties which he desires the brick to possess for the intended use and describe them according to grades locally obtainable. A specification would then read something like this: "All brick shall be tested to meet the tests prescribed by the A. S. T. M. Specification, Serial C-21-30, and shall fall within the following classifications: Exterior walls below ground level A. 75. B. 50. C. 65. D. 15. commonly recognized as hard brick; above the ground level, for exterior face, the same; for backing up (so and so) known as medium brick; for certain interior walls (so and so) known as soft brick."

This is not an entirely new thought. One committee of the A. S. T. M. has already developed a Scoring System for grading fabrics. But more relevant to the subject under discussion and somewhat analogous is the "Scheme of Service Classification of Refractories," de-

veloped by Committee C-8 of our society. This was published in the form of a table with notes in Volume 23, Part I, A. S. T. M. Proceedings, page 216, and will be the basis of further studies by the C-3 Subcommittee, of which I am chairman.

With these remarks as a general introduction, I will discuss now some of the important considerations about tests for brick work from the standpoint of actual use as compared with present A. S. T. M. requirements for individual units, under the following headings.

Compressive Strength

Modulus of Rupture

Tensile Strength

Absorption (inc. freezing and thawing)

Mortar and Bond

Size and Tolerances

Compressive Strength: The compressive strength of a brick has usually been considered the chief index of the quality of the brick. And yet, in tests that have been made on walls, it has been found that failure has often been caused by breaking of the header bricks before crushing of the individual brick.

The results of practically every test of which I have record tend to prove that the strength of the wall is limited by the modulus of rupture and perhaps by the tensile strength of the header bricks rather than by the compressive strength of either the header or stretcher units. Therefore, the vital factor in determining the strength of any piece of brickwork would seem to be the modulus of rupture.

The hardness of any material is usually emphasized as an indication of what can be expected in wearing qualities. However, the exposed surface of a brick in wall is the part which is subjected to wear by the action of the elements and may therefore be the important part to consider.

If it is definitely proven that the modulus of rupture limits the serviceable strength of the brick, it might be advisable to test a brick for surface hardness rather than for compressive strength. It very likely would be found that, for example, some brick which now are classified as medium would be perfectly satisfactory when classified as hard.

As to the methods for testing for compression, some specifications call for testing brick on edge and some flatwise.

It would certainly seem to be advisable to test all building units used in the same manner by similar methods. Information gained now and in the future would also always be comparable with tests made in the past.

Modulus of Rupture: The modulus of rupture or transverse strength is a most important quality of the brick, and, strange as it may seem, many building codes completely ignore it. As I have already stated, the modulus of rupture usu-

ally determines the failing point of a wall or pier, and by merely specifying compressive strength, as is often done, it might be that entirely the wrong deductions would be drawn as to the serviceable strength of the wall. For instance, brick from the New York district might be compared with brick from the Illinois district as follows:

	Mode of Rupture	Compressive Strength
New York	601	5630
Illinois	1180	3200

(Figures given in Bureau of Standards' Technological Paper No. 111.)

The accepted method of estimating strength by the test for compression, which is used by architects, contractors, brick layers and others would show the New York brick the stronger, whereas in reality the Illinois brick might develop greater strength in the wall.

In support of this possibility the Federal Specification Board is considering specifications for brick which would require only modulus of rupture tests, which may be made in the field.

Absorption: What does absorption mean? According to present practice, it means that the amount of moisture the brick can be forced to absorb. This information is all very well, but just what "absorption" means as far as the actual use of the brick is concerned is another matter since the absorption may affect the building or wall in which the brick is used in at least five ways. It may—

(a) Weaken the brick and consequently the strength of the wall. If this is not the case, the amount of absorption of the brick does not matter.

(b) Add weight to each brick. It is advisable to know whether the absorption of the individual brick is sufficient to increase the dead weight of the wall to a dangerous degree.

(c) Affect the amount of moisture which might penetrate to the inside of the wall. Such penetration would probably vary according to mortar, bond and thickness of the wall with the same brick. In practice, it has been proven that bricks with little or no absorption do not make as satisfactory a wall as bricks with a considerable percentage of absorption.

(d) Affect the adhesion of the mortar. This would, without doubt, have a marked effect on the strength of the wall, but has never been determined satisfactorily.

(e) Affect the resistance of the wall to freezing and thawing.

When the structure in which the brick is used is located in a climate subject to freezing weather, the question of freezing and thawing becomes one of the most important factors to be considered in determining an allowable percentage of moisture in building brick.

A very interesting paper on freezing and thawing and the co-relation of so-

dium sulphate treatment with actual freezing of building brick was presented to the 1919 meeting of the A. S. T. M. by Edward Orton, Jr.

Without going into this exhaustive report, it is of interest that Mr. Orton estimated that four sodium sulphate treatments were about equivalent to twenty-five actual freezings. He presented with this report a comparison between the Grading of 37 groups of five bricks each, which in addition to the value of tests illustrated forcibly the difference in strength values of the A. S. T. M. tests for brick of different clays.

Further Freezing Tests Suggested

It is my suggestion that further tests should be made on brick by both the sodium sulphate and actual freezing in order to determine a more definite correlation between these two methods, always bearing in mind the actual conditions of use of the brick in construction.

Due to the time and expense involved in making actual freezing and thawing tests, it may be advisable to use the sodium sulphate tests for bricks of a certain percentage of absorption and actual freezing tests for the rest. Further tests will also help to determine the most important fact to consider in connection with absorption and that is whether the percentage of absorption is really of vital importance in making a classification of building brick.

It is of interest to note what has been done in testing other products to ascertain the effects of freezing and thawing. In a pamphlet on the "Strength, Absorption and Freezing Resistance of Hollow Building Tile," issued by the Bureau of Standards, Mr. H. D. Foster says that "an absorption of 16 per cent. apparently marks a very definite line in the resistance to freezing and thawing. Tile of lower absorption showed little or no effects from 100 freezings and thawings."

Due to the fact that brick is much thicker than hollow tile, it would seem that if the actual danger point for brick can be determined, it will be greatly in excess of 16 per cent and probably at a certain point be dependent on the modulus of rupture.

Regarding absorption in general, the possibility of varying percentages of moisture affecting actual construction work in any of the ways previously mentioned should be determined and then a recommendation made as to how much absorption should be allowed for different uses. The Building Code of the City of Boston requires that the brick be tested for compressive strength dry and then saturated. The difference in strength, if any, between the dry and wet brick, is the determining factor in allowing the material to be used and not the percentage of absorption.

(Continued next week.)

Changing an Attitude of Mind

It has been the tendency of the public to look upon insurance as something on which it must first be "sold" by convincing arguments of the insurance man.

That this attitude is undergoing a change is evidenced in the number of people who no longer wait for the agent to solicit their business but who seek out the agent and ask for insurance advice.

By its national advertising the Insurance Company of North America is helping materially to bring about that hoped for time when people will "consult their insurance agent as they consult their doctor or lawyer."

Represent North America.

BRICK

A Paper by D. Knickerbacker Boyd, Architect and Structural Standardist, Presented at the Annual Meeting, American Society for Testing Materials

(Continued from Last Week)

The Building Code Committee of the U. S. Department of Commerce in its tentative code for Masonry Walls recommends the Specification of the A. S. T. M. with this radical departure. It provides "That when the average compressive strength of brick grading soft by the absorption test is more than 3,000 pounds per square inch, the requirements as to absorption may be ignored."

The A. S. T. M. gradings make it necessary to classify a brick by the results of one test rather than the combination of all tests and so when the percentage of absorption is higher than that allowed for a hard brick, the brick must be classified as medium or soft. It does not seem logical that the absorption should be made the deciding factor when the compressive and tensile strength of a brick may be very high if the absorption does not weaken the brick for practical purposes.

Bricks in actual use are subject to wetting by standing water in the case of foundations and by falling rain in the case of exterior walls. Tests should therefore be made to simulate these conditions as nearly as possible. In the present spec-

ifications of the A. S. T. M., it is provided that the brick be boiled in water for five hours. In some other specifications the method by which the absorption is determined, is without boiling.

Absorption in Brick Exposed to the Weather

Another point should be considered and that is, the rate of absorption. When the brick is used in the wall, it may, if used on a corner, have two surfaces exposed to the weather and the other four surfaces covered with mortar. The moisture which the brick will absorb will come either from the two exposed surfaces or from the mortar. The brick when boiled can liberate practically all the air which is held inside and which is displaced when the brick is thoroughly saturated. The brick, when immersed, can liberate eventually practically all of the air. Yet when it is built into the wall, it cannot liberate the air as readily and it is doubtful if it would ever reach the maximum of absorption. The rate of absorption should indicate how easily the air would be driven out of the brick and would probably give some idea of what the actual absorption would be in the wall and conversely the evaporation, which would dry out a wall after wetting.

What I would like, as an architect, to see determined is the amount of time which it would require the maximum rainfall in any locality, driven by the average wind pressure in that locality,

against walls of given thicknesses constructed with good sound hard brick of that locality in different kinds of mortar, to penetrate such walls to the point of saturation. I would also want to know, not so much that two brick at the end of five hours each had, in a laboratory test, absorbed the same amount of water, but which brick had absorbed the most water the quickest. If at the end of one hour or two hours, one of the brick had become saturated but the other one had required the full five hours to reach its saturation point, then I would have some index of the time required to penetrate a wall. But this would have to be checked with the wall tests—where the mortar joints play such an important part.

There is another factor which seems to me to have great bearing on the interpretation of laboratory tests of brick in reference to absorption and freezing and thawing. Practically all tests which have been made heretofore have been made on new brick. There are, however, thousands of buildings in this country in which brick has been subjected to the rigours of a hundred and more severe winters and an equal number of torrid summers. By testing these brick, when they are available, a knowledge of how freezing and thawing has really affected brick might be obtained and this information used as another basis on which to interpret the results of laboratory tests for absorption.

What we all would like to see determined, if possible, is: Just what life or

duration in certain localities may be considered as equivalent to five hours boiling? Just what, in years of service, may be represented by 25 freezing and thawing tests? By 50 such? Or by 100? Or by 200? What matter it to us, or to the people who pay for and live in buildings, what the results might be of tests on the individual brick, for compression, for modulus of rupture, and for absorption, if the tests did not indicate that the brick give the desired service in the wall?

To these three requirements for individual brick we must add another that will give an index to durability under exposure in the wall—or establish one or two tests that will cover all.

The Boiling Tests and Freezing and Thawing Tests made on a thoroughly saturated brick give a basis on which to figure a laboratory strength for the brick. It is then necessary to interpolate from this laboratory analysis to arrive at a conclusion which will be substantiated in actual practice. Take as a well known example, Independence Hall, Philadelphia. This building has been subjected to over a hundred and fifty winters of freezing and thawing and the bricks are apparently in perfect condition. It is not known how the A. S. T. M. tests might have classified these brick but the average laboratory tests might not have indicated this wonderful life and service rendered to date with apparently centuries yet to go.

Mortar and Bond: The use of building brick which we are considering is in some form of construction as units bonded together by a mortar. As the mortar is a considerable percentage of the actual wall, the strength of the wall depends to a great extent upon the strength of the mortar. Tests have shown that in some instances a wall will develop a greater compressive strength than the strength of the mortar alone. Mortar is usually tested in cubical or cylindrical shapes but is not used in that form, which accounts for some difference.

Since the strength of the brick is greater than the strength of the mortar, it is important to find the strength of the mortar as well as the strength of the brick. Some building codes have taken this into consideration as for example, the code of the National Board of Fire Underwriters

which has been adopted practically in toto by many cities.

In this Code, it is required that bricks be tested *flatwise* for compression. No modulus of rupture is specified. The brick must develop 3,000 pounds compressive strength but when laid up in a wall, the load allowed is limited as follows:

	Lbs. Per Sq. In.
Brickwork in Portland Cement Mortar	250
Brickwork in Natural Cement Mortar	208
Brickwork in Lime and Portland Cement Mortar	208
Brickwork in Lime Mortar	111

It can be seen from this that while the brick must pass certain tests, the use of the brick is determined not by the strength of the brick itself, but by the mortar. Why should a brick have to be the same strength, where only a load of 111 pounds per square inch is allowed, as it would have to be when 250 pounds per square inch is allowed? If the brick would last long and not deteriorate, it is only reasonable that a weaker brick would do for a lighter load. The only logical answer to this is that a brick of a certain compressive strength would normally be hard and durable. This again would vary with different clays.

Irrespective of any required compressive strength in the individual brick, it is evident that the mortar used is of great importance. Tests of brick piers built with different mortars were made at Stockholm by Professor Kreuger and the results are interesting.

Influence of the Strength of Mortar on Piers

Pier No.	Bricks	Mortar Strength of in Lbs.	Mortar Mixture	Strength of Piers
1	4,040	0	Dry Sand	740
2	4,040	38	1 lime: 3 sand	740
3	4,040	355	2 lime: 1 cement: 9 sand	1,420
4	4,040	695	1 lime: 1 cement: 6 sand	1,840
5	4,040	1,280	1 lime: 2 cement: 9 sand	1,700
6	4,040	1,640	2 lime: 1 cement: 7 sand	1,930
7	4,040	2,620	1 cement: 3 sand	1,980

Tests on these bricks were not made in the same way as they are made in the United States but they give some idea of the effect of mortar on the ultimate strength of a pier. The modulus of rupture is not given and cannot therefore be considered in making deductions.

CONTEMPLATED CONSTRUCTION: ARCHITECTS AND OWNERS: COST LIMIT: LAST DAYS FOR FILING BIDS:

CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Gym Building, City Line, Sixty-sixth Avenue and Haverford Avenue, Overbrook, Pa. Architects, Heacock & Hokanson, 1211 Chestnut street, Philadelphia. Owners, Friends' Central, Fifteenth and Race streets, Philadelphia. Brick, stucco, cut stone, steel (heating, ventilating and electric reserved), metal lath, tile work, bond, iron work, maple, cement and composition floors, variegated slate roof, plumbing, painting, glazing, hollow concrete block. Revised plans in progress.

Milk Distributing Station, Stable and Garage, Twelfth and Welsh streets, Chester, Philadelphia. Architect and engineer, Charles Wistler, care of owner. Owners, Supplee-Wills-Jones Co., 1523 North Twenty-sixth street, Philadelphia. Brick, steel, concrete, 1 story, size of lot 152x154 feet, slag roof, cement floors. Plans about completed.

Church (int. alts. and renovations), Olney, Pa. Architect, Albert N. Dobbins, 1709 Arch street, Philadelphia. Owners, St. James' Methodist Episcopal Church, Rev. W. Galloway Tyson, 201 East Tabor road, Philadelphia. Plans in progress.

Residence (2-family) (alts.), Northwest Corner Farraget Terrace and Locust street, Philadelphia. Architects, Stuckert & Co., Crozer Building, Philadelphia. Owner, Mrs. Ethel Thomas, care of architect. Interior alterations, hot water heat, electric light, tile work, plumbing. Architects are sub-letting.

Office Building, 1508 Walnut street, Philadelphia. Owners, Stroud & Co., care of Edward B. Robinette, 1429 Walnut street, Philadelphia. Stone, brick, reinforced concrete, steel, 8 stories, 25x170 feet. Work contemplated.

Apartment House, Northeast Corner Eighteenth and Rittenhouse, Philadelphia. Owners, Company, care of Isadore Stern, Flanders Building, Philadelphia. Stone, steel, concrete, 19 stories, 110x150 feet. Work contemplated.

Factory (reconstruction), Fifty-second and Gray's Avenue, Philadelphia. Architects, Heacock & Hokanson, 1211 Chestnut street, Philadelphia. Owners, M. F. Wilfong Iron Works, on premises. Brick, steel, concrete, general fire restoration. Owners taking sub-bids.

Synagogue, Fifty-eighth and Warrington, Philadelphia. Architect, J. S. Fuller, 5438 Locust street, Philadelphia. Owners, Congre-

gation Beth Am, care of architect. Brick, limestone, bluestone, ornamental terra cotta, basement, auditorium and balcony, 62x88 feet, slag roof, maple floors, vapor heat, oil burning system, electric light, tile and marble work, carpentry, ornamental plaster, church equipment, painting and glazing. Architect will be ready for sub-bids in one week.

Parochial School, Fourth and Brown streets, Philadelphia. Architect, Peter F. Getz, Victory Building, Philadelphia. Owners, St. Agnes' Slovak Church, Rev. J. L. Yorke, on premises. Stone, brick, cut stone, concrete, 3 stories and basement, steam heat, electric light, metal lath, marble work, rolled steel sash, bond, ornamental iron work, iron stairs, slag roof, pine, cement and maple floors, plumbing, metal weather strip and ceiling, dampproofing, metal partitions, granite composition stair treads, ornamental plaster, wrought iron pipe, Anti Hydro waterproofing. Revised plans in progress. Architect will be ready for bids (new) in one week.

Residence and Garage, West Gowen Avenue, Chestnut Hill. Architects, Walter T. Karcher and Livingston Smith, 34 South Seventeenth street, Philadelphia. Owner, Morris Llewellyn Cooke, care of architects. Stone, steel, 2½ stories, 1½ stories and basement, 56x25 feet, 20x20 feet, hot water heat, electric light, metal lath, tile work, variegated slate roof, oak and pine floors, plumbing, painting and glazing, tile work, bond, ornamental iron work, waterproofing (Anti Hydro), metal casement sash, flagstone, wrought iron pipe. Architects taking bids due September 14th.

New Buildings alts. to Buildings, Eighth and Thompson streets, Philadelphia. Architect, Amos Barnes, Perry Building, Philadelphia. Owners, Children's Homeopathic Hospital, on premises. Brick, steel, cut stone (plumbing, heating and electric work reserved), Barrett specification roof, cement and oak floors, hollow tile, metal lath, tile, marble and terrazzo work, copper skylights, hollow metal doors, architectural terra cotta, ornamental iron work, new nurses' home, 3 stories and basement, 102x36 feet, new power house, 2 stories, 63x32 feet, dispensary building, 3 stories and basement, 36x70 feet, alts. to present nurses' home. Architect taking bids due September 14th.

Building (alts. and add.), 1329 Ridge Avenue, Philadelphia. Architect, I. W. Levin, 1011 Chestnut street, Philadelphia. Owner, Charles Miller, on premises. Brick, steel, 2 stories, 50x86 feet, electric light, wood floors, carpentry and mill work, plastering. Architect taking bids due as soon as possible.

Installation of New Receiving Doors and Skid, 1301-29 Glenwood Avenue, Philadelphia. Architect, J. R. Torrence, 85 Ninth Avenue, New York City. Owners, National Biscuit Co., on premises. Lumber, steel awnings, steel plates, rolling steel shutters, painting. Architect taking bids due as soon as possible.

Boiler Room Repairs to Ceiling, United States Mint, Philadelphia. Owners, United States Government, care of Custodian, Seventeenth and Spring Garden streets, Philadelphia. Owners taking bids due September 10th, 2 P. M. (Standard Time). Plan No. R-706.

Proposals will be received from contractors to take up ten miles of trolley rails situated between Yardley, Pa., and New Hope, Pa. For further particulars apply Citron Byer Co., 69 Muirhead Avenue, Trenton, N. J.

Municipal Car Storage Yard, Piers 82-84, South Delaware River. Owners, Department of Wharves, Docks and Ferries, Municipal Pier No. 4, South Wharves, Philadelphia. Owners taking bids due September 14th, 11 A. M. (Standard Time). Construction with incidental work of municipal car storage yard. Plans and specifications may be obtained from Room 204, Municipal Pier No. 4, South Wharves. Deposit, \$25, refunded. Certified check 5 per cent. of amount of bids.

Grading and Paving, Philadelphia. Owners, Department of Public Works, Bureau of Highways, 232 City Hall. Owners taking bids due September 15th, 11 A. M. (Standard Time). Grading, asphalt paving (assessment work), country road improving, surfacing, asphalt repaving (subject to future legislation), redressed granite block repaving (subject to future legislation, paving and repaving certain alleys, filler for asphalt paving mixtures, construction of footways, painting Coulter Street Bridge, construction of loading platform. Certified check, 5 per cent. of amount of bid.

Apartment, Northwest Corner Queen Lane and Laurens street, Philadelphia, \$15,000.

**"No hot water fo' mah dishes---
we surely needs one o' dem Tank Heaters."**

IT IS exasperating to the cook when somebody takes a bath before supper and leaves her in the lurch on the hot water question. The least a good cook or a good laundress can ask for is **PLENTY OF HOT WATER**, and it is so easily and so cheaply supplied with a

The Tank Heater
will give plenty of
hot water all the
time.

NOVELTY TANK HEATER

Less than a bucket of pea coal or buckwheat coal in 24 hours keeps this little heater right on the job day and night—and the 40-gallon tank stays full of hot water. A minute's attention morning and evening is all that is necessary and the operating cost is but 5 cents a day—one-quarter as much as gas. (This is unprejudiced, for we make both kinds.)

We were the originators of this type of coal tank heater and there are now imitations. Install the **NOVELTY**, with its brick-lined fire-pot, baffled water-way, two-bar rocking grate and reinforcement rods at the sides. Look for the name on the door. In these days of many baths, the average household wants a **BIG** supply of hot water—a **FORTY GALLON** tankful constantly on tap. The **Novelty** is designed for this.

Get all the facts—now! Write or phone today for complete information, "Hot Water and Plenty of It." Address Dept. BG-9.
